<i>Preface</i>	<i>xi</i>
<i>To the Student</i>	<i>xv</i>

1 Introduction

1-1 Why Study Chemistry?	1	1-2 Classification of Matter (review)	3	1-3 Separation of Mixtures into Pure Substances	6	1-4 Mathematics Review, Significant Figures, Exponents, and (review) the Metric System	8	1-5 Measurement of Length, Mass, and Volume. Accuracy and Precision	17	1-6 Measurement of Temperature and Pressure (review)	18	1-7 The Case for Atoms (review)	20	1-8 Atomic Weights (review) and Moles of Atoms	22	1-9 Gross Structural Features of the Atom (review)	26	1-10 Simple Rules for Naming Compounds	32
--------------------------	---	---------------------------------------	---	---	---	--	---	---	----	--	----	---------------------------------	----	--	----	--	----	--	----

2 Tools of the Trade

2-1 Formulas for Atoms and Molecules	36	2-2 Modern Atomic and Molecular Weight Determinations	37	2-3 More about Moles	39	2-4 Empirical Formulas and Chemical Equations	43	2-5 Chemical Analysis	46	2-6 Balancing Chemical Equations (review)	49	2-7 Mole-Mole Problems	51	2-8 Mass-Mole Problems	51	2-9 Mass-Mass Problems	52	2-10 Problems Involving a Limited Quantity of a Reactant	53	2-11 Percent Yield	54
--------------------------------------	----	---	----	----------------------	----	---	----	-----------------------	----	---	----	------------------------	----	------------------------	----	------------------------	----	--	----	--------------------	----

3 Solutions

3-1 Definitions and Quantitative Expression of Solubility	62	3-2 Calculations Involving Solutions	64	3-3 Solutions of Electrolytes and Nonelectrolytes	68	3-4 Total and Net Ionic Equations	70	3-5 Problems Involving Reactants in Solution	73	3-6 Titrations	74	3-7 Equivalent Weight and Equivalents (optional)	78
---	----	--------------------------------------	----	---	----	-----------------------------------	----	--	----	----------------	----	--	----

4 Introductory Considerations of Energy and Electromagnetic Radiation

4-1 Some Definitions Pertinent to Energy Considerations	84	4-2 Energy, Heat, and Work	85	4-3 Some Applications of the First Law	88	4-4 Enthalpy: A State Function	91	4-5 Coulomb's Law	93	4-6 Electromagnetic Radiation	95	4-7 Diffraction of Radiation	103	4-8 Particulate Model of Radiation	103	4-9 Thermography	107
---	----	----------------------------	----	--	----	--------------------------------	----	-------------------	----	-------------------------------	----	------------------------------	-----	------------------------------------	-----	------------------	-----

5	Atomic Structure, Atomic Properties, and Molecular Consequences of Atomic Properties	111
	5-1 Bohr Model of Atomic Structure 112 5-2 Dual Properties of Matter 116 5-3 Uncertainty Principle 117 5-4 Postulates of Quantum Mechanics 118 5-5 Quantum Mechanical Approach to the Hydrogen Atom. Quantum Numbers 118 5-6 Orbital Shapes 121 5-7 Extension to Atoms other than Hydrogen 125 5-8 Box Diagrams 129 5-9 Properties of Elements Related to their Atomic Structures 132 5-10 Metallic Properties of Elements 141 5-11 Relationship of Atomic Structure to Molecular Formula 142 5-12 Writing Lewis Structures 146	
6	Molecular Structure	159
	6-1 Ionic Bonding 160 6-2 Other Types of Electrostatic Bonding 162 6-3 A More Detailed Look at the Covalent Bond in H_2 164 6-4 Second Row Homo- nuclear Diatomics 173 6-5 Application of MO Theory to Homonuclear Di- atomic Molecules 180 6-6 Extension of MO Theory to Other Diatomic Molecules 184 6-7 Polyatomic Molecules: Relationship of the Molecular Orbital to Hybridization Description (optional) 186 6-8 Geometry of Molecules 188 6-9 Hybridization 195 6-10 Delocalized Pi Systems (optional) 207 6-11 Metallic Bonding (optional) 209	
7	The Gaseous, Liquid, and Solid States	215
	7-1 Nature of the Gaseous State 215 7-2 Kinetic Theory of Gases 225 7-3 Chemical Reactions Involving Gases 226 7-4 The Atmosphere 229 7-5 Liquids 233 7-6 Vapor Pressure vs. Temperature Plots 237 7-7 Solids 239 7-8 Properties of Substances Related to Structure 244 7-9 Electrical Properties of Materials 248 7-10 A Simple Molecular Orbital Description of Conductivity: Semiconductors (optional) 250	
8	An Introduction to Acids and Bases, Chemical Equilibrium, and Chemical Kinetics	256
	8-1 Lewis Acids and Bases 256 8-2 Lewis Acid-Base Displacement Reactions 263 8-3 The Ionization of HX Compounds (Bronsted Acids) in Water 265 8-4 An Introduction to Reaction Rates and Chemical Equilibria 268 8-5 More on the Ionization of Acids and Bases in Water 271 8-6 Factors That Cause Reactions to Proceed Nearly to Completion 274 8-7 Titratable Acidity 274	
9	Water: Properties and Reactions. Pollution and Purification. Colligative Properties	277
	9-1 Relationship of Structure to the Physical Properties of Water 277 9-2 Na- ture of the Proton in Water 282 9-3 Reactivity of Water: Hydration and Hy- drolysis 285 9-4 Natural Waters 295 9-5 Water Treatment for Drinking Purposes 299 9-6 Colligative Properties of Aqueous and Nonaqueous Solvents 301	

10	Periodic Trends in the Descriptive Chemistry of Elements and Compounds. Oxidation-Reduction	315
	10-1 Trends in Metallic Properties 315 10-2 Reactivity of Hydrogen and Hydrides 318 10-3 Reactivity of Oxygen (O_2) and Oxides 320 10-4 Trends in Reactivity of Simple Halides 326 10-5 Oxidation State or Oxidation Number 329 10-6 More about Electronegativity 333 10-7 Nomenclature of Simple Compounds 333 10-8 Oxidation-Reduction Reactions 336	
11	Enthalpy Changes Accompanying Chemical Reactions	348
	11-1 Internal Energy Changes in Chemical Reactions 348 11-2 Thermochemistry 354 11-3 Law of Constant Heat Summation: <u>Hess's Law</u> 359 11-4 Enthalpy Cycles 363 11-5 Energy Cycles for Ionic Compounds 364 11-6 Bond Energies (<u>enthalpies</u>) 368	
12	Quantitative Treatment of Acid-Base Equilibria	374
	12-1 A Quantitative Study of the Gas Phase Reactions at Equilibrium 374 12-2 Equilibria Involving the Ionization of Water 380 12-3 Slightly Ionized Acids and Bases in Aqueous Solution 384 12-4 Medium Strength Electrolytes (optional) 387 12-5 Common Ion Problems 389 12-6 Buffers 392 12-7 Titration of Acids and Bases 396 12-8 Indicators and pH Measurement 398 12-9 Hydrolysis Reactions (optional) 400 12-10 Acid-Base Reactions of Materials with Biological Importance: Proteins 402	
13	Heterogeneous Equilibria	407
	13-1 Equilibria Involving a Gas and a Solid 407 13-2 Equilibria Involving Two Immiscible Liquid Phases 408 13-3 Equilibria Involving Solid Phases and Solutions 410 13-4 Hydrogen Sulfide 414 13-5 Heterogeneous Equilibria and Chromatography 417	
14	The Second Law of Thermodynamics	424
	14-1 Statement of the Second Law 424 14-2 Standard Free Energy Change, ΔG° 427 14-3 Relationship of ΔG° to ΔH° 430 14-4 Molecular Interpretation of Entropy 432 14-5 Experimental Determination of Thermodynamic Parameters 435 14-6 Third Law of Thermodynamics 440 14-7 Use of Thermodynamic Data in Understanding Chemical Reactivity 441 14-8 A Thermodynamic Evaluation of Solubility 444 14-9 A Summary 445	

15	Interconversion of Chemical and Electrical Energies	449
	15-1 Design of Voltaic Cells 450 15-2 Potentials of Voltaic Cells 454 15-3 Dry Cells 459 15-4 Concentration Cells 460 15-5 Electrolytic Cells 461 15-6 Faraday's Law (review) 463 15-7 Lead Storage Batteries 465 15-8 New Batteries and Fuel Cells 466 15-9 Thermodynamic Description of Redox Systems 468 15-10 Nernst Equation (optional) 470 15-11 Corrosion 472	
16	The Interaction of Matter with Electromagnetic Radiation	479
	16-1 Absorption of Radiation by Matter 479 16-2 Quantization, Selection Rules, and Spectra 484 16-3 Fluorescence and Phosphorescence 488 16-4 Photochemical Reactions 491 16-5 Commercial Photochemical Processes. Photography 492 16-6 Direct Conversion of Radiation to Electrical Energy 495 16-7 Solar Energy Conversion 496 16-8 Lasers 497	
17	Nuclear Sources of Energy	502
	17-1 Naturally Occurring Nuclear Reactions 503 17-2 Controlled Nuclear Reactions 505 17-3 Nuclear Fission 506 17-4 Nuclear Binding Energy 510 17-5 Nuclear Fusion 512	
18	Chemical Kinetics	515
	18-1 Rates of Reaction 515 18-2 Dependence of Reaction Rate on Concentration 517 18-3 Determination of the Rate Law 520 18-4 Half-life of a Chemical Reaction 525 18-5 Radiocarbon Dating 526 18-6 Mechanistic Interpretations of Rate Laws 527 18-7 Enzymes in Biological Reactions 530 18-8 Effect of Temperature on Reaction Rates 531	
19	Selected Descriptive Chemistry of the Transition Metals	539
	19-1 General Introduction 539 19-2 Metallurgy 539 19-3 Reactivity of the Transition Elements 545 19-4 Various Types of Ligands and Complexes 547 19-5 Nomenclature of Coordination Compounds 551 19-6 Various Geometries and Coordination Numbers 555 19-7 Nature of Bonding in Transition Metal Complexes (optional) 558 19-8 Ligand Field Diagrams 561 19-9 Magnetic Properties of Complexes 564 19-10 Tetrahedral and Square Planar Complexes 568	
20	Selected Descriptive Chemistry of the Main Group Elements	572
	20-1 Group IA Elements: The Alkali Metals 573 20-2 Group IIA Elements 576 20-3 Group IIIA Elements 577 20-4 Group IVA Elements 581 20-5 Group VA Elements: The Nitrogen Family 587 20-6 Group VIA Elements: The Oxygen Family 598 20-7 Group VIIA Elements: The Halogens 605	

21

Chemistry of the Hydrocarbons

610

21-1 Structures and Nomenclature of Saturated Hydrocarbons 611 21-2 Structures and Nomenclature of Alkenes 618 21-3 Structures and Nomenclature of Aromatic Hydrocarbons 620 21-4 Structures and Nomenclature of Alkynes 622 21-5 Reactions of Alkanes 624 21-6 Reactions of Alkenes 629 21-7 Hydrogenation and Oxidation of Double Bonds 635 21-8 Free Radical Polymerization Reactions 636 21-9 Reactions of Alkynes 640 21-10 Reactions of Aromatic Hydrocarbons 640 21-11 Directive Influence of Substituents 646

22

Organic Molecules Containing Some Common Functional Groups

653

22-1 Organic Derivatives of Various Elements 653 22-2 Compounds Containing the Carbonyl, >C=O , Group 661 22-3 Condensation Polymerization 677 22-4 Relevant Compounds 678 22-5 Carbohydrates 686 22-6 Stereoisomerism 690

23

Biochemistry

705

23-1 Biomolecules 705 23-2 Proteins 708 23-3 Sequencing of Proteins 717 23-4 Enzymes 719 23-5 Metabolism of Food 720 23-6 Self-replication 726 23-7 Effect of Pollutants on Biological Processes 732 23-8 Drugs 736 23-9 Behavioral Drugs 738

Appendixes

- I Diffraction of Radiation 743
- II The Bohr Model of the Atom 745
- III The Solution of the Wave Equation for a Particle in the Box 747
- IV Logarithms 753
- V Derivation of the Integrated Form of the First-order Rate Expression 758
- VI SI Units 759

Answers to the Tests 763

Answers to Selected Exercises 807
