FOREWORD (Th. Hahn)	xi
PREFACE (Th. Hahn)	xii
COMPUTER PRODUCTION OF VOLUME A (D. S. Fokkema)	xiv
PART I: TABLES FOR PLANE GROUPS AND SPACE GROUPS	1
1. SYMBOLS AND TERMS USED IN THIS VOLUME (compiled and edited by Th. Hahn)	3
1.1. Printed symbols for crystallographic items	4
1.2. Symbols for the conventional centring types of one-, two-, and three-dimensional cells	5
1.3. Printed symbols for symmetry elements and for the corresponding symmetry operations in one, two, and three dimensions	6
1.4. Graphical symbols for symmetry elements in one, two, and three dimensions	7
2. GUIDE TO THE USE OF THE SPACE-GROUP TABLES (Th. Hahn & A. Vos)	11
2.1. Classification of space groups	12
2.2. Contents and arrangement of the tables	14
2.3. Headline	14
2.4. International (Hermann–Mauguin) symbols for plane groups and space groups	15
2.5. Patterson symmetry	16
2.6. Space-group diagrams	17
2.7. Origin	21
2.8. Asymmetric unit	22
2.9. Symmetry operations	23
2.10. Generators	24
2.11. Positions	25
2.12. Oriented site-symmetry symbols	26
2.13. Reflection conditions	27
2.14. Symmetry of special projections	30
2.15. Maximal subgroups and minimal supergroups	32
2.16. Monoclinic space groups	35
2.17. Crystallographic groups in one dimension	38
References	38
3. SPACE-GROUP DETERMINATION AND DIFFRACTION SYMBOLS (A. Vos & M. J. Buerger)	39
3.1. Introduction	40
3.2. Laue class and cell	40
3.3. Reflection conditions and diffraction symbol	40
3.4. Deduction of possible space groups	41
Table 3.2. <i>Reflection conditions, diffraction symbols, and possible space groups</i>	41
3.5. Diffraction symbols and possible space groups	46
3.6. Space-group determination by additional methods	47
References	48

CONTENTS

4. SYNOPSIS TABLES OF SPACE-GROUP SYMBOLS. GROUP-SUBGROUP RELATIONS (E. F. Bertaut)	49
4.1. Introduction	50
4.2. Symbols for plane groups (two-dimensional space groups)	53
Table 4.2.1. <i>Index of symbols of plane groups</i>	54
4.3. Symbols of space groups	54
4.3.1. <i>Triclinic system</i>	54
4.3.2. <i>Monoclinic system</i>	54
4.3.3. <i>Orthorhombic system</i>	55
4.3.4. <i>Tetragonal system</i>	60
4.3.5. <i>Trigonal and hexagonal systems</i>	63
4.3.6. <i>Cubic system</i>	66
Table 4.3.1. <i>Index of symbols of space groups for various settings and cells</i>	55
References	68
5. TRANSFORMATIONS IN CRYSTALLOGRAPHY (H. Arnold)	69
5.1. Introduction	70
5.2. Transformations of the coordinate system (unit-cell transformations)	70
5.3. Transformations of symmetry operations (motions)	72
5.4. Invariants	73
5.5. Example: low-cristobalite and high-cristobalite	74
Table 5.1. <i>Selected (3 × 3) transformation matrices P and $Q = P^{-1}$</i>	76
References	75
6. THE 17 PLANE GROUPS (TWO-DIMENSIONAL SPACE GROUPS)	81
7. THE 230 SPACE GROUPS	101
PART II: SYMMETRY IN CRYSTALLOGRAPHY	709
8. INTRODUCTION TO SPACE-GROUP SYMMETRY (H. Wondratschek)	711
8.1. Basic concepts	712
8.1.1. <i>Spaces and motions</i>	712
8.1.2. <i>Symmetry operations and symmetry groups</i>	714
8.1.3. <i>Crystal patterns, vector lattices, and point lattices</i>	714
8.1.4. <i>Crystallographic symmetry operations</i>	715
8.1.5. <i>Space groups and point groups</i>	716
8.2. Classification of space groups, point groups, and lattices	718
8.2.1. <i>Space-group types</i>	718
8.2.2. <i>Arithmetic crystal classes</i>	719
8.2.3. <i>Geometric crystal classes</i>	720
8.2.4. <i>Bravais classes of matrices and Bravais types of lattices</i>	720
8.2.5. <i>Bravais flocks of space groups</i>	721
8.2.6. <i>Crystal families</i>	721
8.2.7. <i>Crystal systems and Bravais systems</i>	722
8.3. Special topics on space groups	723
8.3.1. <i>Coordinate systems in crystallography</i>	723
8.3.2. <i>Wyckoff positions, site symmetries, and crystallographic orbits</i>	724
8.3.3. <i>Subgroups and supergroups of space groups</i>	726
8.3.4. <i>Sequence of space-group types</i>	728
8.3.5. <i>Space-group generators</i>	728
Acknowledgements	730
References	730

9. CRYSTAL LATTICES (H. Burzlaff, H. Zimmermann & P. M. de Wolff)	73
9.1. Bases and lattices	73
9.2. Bravais lattices and other classifications	73
9.3. Reduced bases	73
9.3.1. Introduction	73
9.3.2. Definition	73
9.3.3. Main conditions	74
9.3.4. Special conditions	74
9.3.5. Lattice characters	74
9.3.6. Applications	74
Acknowledgement	74
References	74
10. POINT GROUPS AND CRYSTAL CLASSES (Th. Hahn & H. Klapper)	74
10.1. Introduction	74
10.2. Crystallographic point groups	74
Table 10.2.1. <i>The 10 two-dimensional crystallographic point groups</i>	74
Table 10.2.2. <i>The 32 three-dimensional crystallographic point groups</i>	75
10.3. Subgroups and supergroups of the crystallographic point groups	77
10.4. Non-crystallographic point groups	77
10.5. Point-group symmetry and physical properties of crystals	78
10.5.1. <i>General restrictions on physical properties imposed by symmetry</i>	78
10.5.2. <i>Morphology</i>	78
10.5.3. <i>Etch figures</i>	78
10.5.4. <i>Optical properties</i>	78
10.5.5. <i>Pyroelectricity and ferroelectricity</i>	78
10.5.6. <i>Piezoelectricity</i>	78
10.6. Names and symbols of the crystal classes	78
Acknowledgements	78
References	78
11. SYMMETRY OPERATIONS (W. Fischer & E. Koch, with Tables 11.2 and 11.3 by H. Arnold)	78
11.1. Point coordinates and symmetry operations	78
11.2. Symbols for symmetry operations	78
11.3. Derivation of symbols for symmetry operations	78
11.4. Derivation of coordinate triplets from symbols of symmetry operations	79
Tables 11.2 and 11.3. <i>Matrices for point-group symmetry operations and orientation of corresponding symmetry elements</i>	79
References	79
12. SPACE-GROUP SYMBOLS AND THEIR USE (H. Burzlaff & H. Zimmermann)	79
12.1. Point-group symbols	79
Table 12.3. <i>Point-group symbols</i>	79
12.2. Space-group symbols	79
12.3. Properties of the international symbols	79
Table 12.5. <i>Standard space-group symbols</i>	79
12.4. Changes introduced in space-group symbols since 1935	80
References	80

CONTENTS

13. ISOMORPHIC SUBGROUPS OF SPACE GROUPS (Y. Billiet & E. F. Bertaut)	809
13.1. Isomorphic subgroups	810
Table 13.1.1. <i>Isomorphic subgroups of the plane groups</i>	812
Table 13.1.2. <i>Isomorphic subgroups of the space groups</i>	812
13.2. Derivative lattices	814
Table 13.2.1. <i>Two-dimensional derivative lattices of indices 2 to 7</i>	816
Table 13.2.2. <i>Three-dimensional derivative lattices of indices 2 to 7</i>	816
References	817
14. LATTICE COMPLEXES (W. Fischer & E. Koch)	819
14.1. Introduction and definition	820
14.2. Reference symbols and characteristic Wyckoff positions	821
14.3. Additional features of lattice complexes	821
14.3.1. <i>The degrees of freedom</i>	821
14.3.2. <i>Limiting complexes</i>	821
14.4. Application of the lattice-complex concept	822
14.5. Descriptive symbols	822
14.5.1. <i>Invariant lattice complexes</i>	844
14.5.2. <i>Lattice complexes with degrees of freedom</i>	845
14.5.3. <i>Properties of the descriptive symbols</i>	847
Table 14.1. <i>Plane groups: assignment of Wyckoff positions to Wyckoff sets and to lattice complexes</i>	823
Table 14.2. <i>Space groups: assignment of Wyckoff positions to Wyckoff sets and to lattice complexes</i>	824
Acknowledgement	847
References	847
SUBJECT INDEX	849

Back and front covers: Space-group example with references to the appropriate sections of the *Tables*.
