

THE MIRIAM PROJECT

This series includes reports on

- ☐ mathematical modelling in Industry and Applied Sciences;
- ☐ research activity in the fields of Applied Mathematics that are relevant to the problem solving in Industry, Finance, Commerce, Biotechnology, Medicine, Environmental Sciences, etc;
- ☐ methods and tools of advanced Scientific Computing and Visualization;

It also includes, with respect to the same areas of interest,

- ☐ Lecture Notes
- ☐ Report of «Modelling Seminars»
- ☐ Ph.D. Theses

The European Society for Mathematical and Theoretical Biology (ESMTB) fosters interdisciplinary collaboration between mathematicians and bioscientists and acts as a forum for the exchange of recent research results and new research directions inside the wide community of scientists working in theoretical biology and medicine, in Europe and beyond.

The 5th Conference of the Society was held in Milan during July 2-6 2002. It was devoted to the fastest growing areas of research in science where experimental biology and medicine, biochemistry, mathematics, computational science, physics and various fields of technology merge.

This volume includes contributions to

Bioinformatics and Computational Biology
Biotechnology and Bioengineering
Computational Neuroscience
Cell Signalling and Cellular Organization
Cardiovascular Systems
Immunology
Individual Based Models
Infectious Diseases
Shape and Pattern
Tumor Growth and Therapy

ISBN 88-7488-055-3

BIOINFORMATICS AND COMPUTATIONAL BIOLOGY	1
A mathematical morphology contribution to the analysis of DNA microarray images	3
<i>Jesús Angulo, Jean Serra</i>	
A computational approach to regulatory element discovery in eukaryotes	10
<i>Michele Caselle, Ferdinando Di Cunto, Paolo Provero</i>	
Winner-Relaxing Kohonen Maps	17
<i>Jens Christian Claussen</i>	
Qualitative Simulation of the Initiation of Sporulation in <i>Bacillus subtilis</i>	23
<i>Hidde de Jong, Johannes Geiselmann, Céline Hernandez, Michel Page</i>	
Nonparametric modelling of in vivo antitumor pharmacodynamic studies to optimize drug concentration and exposure time	29
<i>Massimiliano Germani, Paolo Magni, Giuseppe De Nicolao, Italo Poggesi, Maurizio Rocchetti</i>	
Basins of Attraction and Control of Current in Inertia Ratchets	36
<i>Fereydoon Family, Hilda A. Larrondo, Miguel C. Arizmendi</i>	
Mechanisms of Cell Condensation During Early Avian Limb Development	47
<i>George Hentschel, Tilman Glimm</i>	
Real-time quantitative PCR based on a size-dependent branching process	54
<i>Christine Jacob, Nadia Lalam</i>	
Bayesian Network Classification of Binarized DNA Fingerprinting Patterns	60
<i>Mats Gyllenberg, Jonas Carlsson, Timo Koski</i>	
Implications of domain growth in morphogenesis	67
<i>Philip K. Maini, Edmund J. Crampin, Anotida Madzvamuse, Andrew J. Wathen, Roger D.K. Thomas</i>	

Three-dimensional model of the muscle structure and the surface EMG	74
<i>Marc Adrien Schnetzer, Dieter G. Rüegg, Richard Baltensperger, Jean Pierre Gabriel</i>	
A Novel Mechanism for Mesenchymal Condensation during Limb Chondrogenesis in vitro	80
<i>Wei Zeng, Gilberto L. Thomas, Stuart A. Newman, James A. Glazier</i>	
BIOTECHNOLOGY AND BIOENGINEERING	87
Modeling congestive heart failure: a control system model with state delay	89
<i>Jerry Batzel, Susanne Timischl-Teschl, Franz Kappel</i>	
A mathematical analysis of a reduced ASM1-model	96
<i>Hajnalka Fuer</i>	
An Individual Anisotropic and Inhomogeneous Material Description of the Human Mandible	103
<i>Cornelia Kober, Robert Sader, Hans Florian Zeilhofer, Peter Deuflhard</i>	
EEG analysis in cerebral death condition using Wavelet Packet Decomposition	110
<i>Federico Santoni, Francesco Marrosu</i>	
COMPUTATIONAL NEUROSCIENCE	119
A stochastic model for the rising phase of myosin head displacements along actin filaments	121
<i>Aniello Buonocore, Antonio Di Crescenzo, Barbara Martinucci</i>	
Control of the behavior in a neuronal system with Time-Delay	127
<i>Noelia Montejo, Nieves Lorenzo, Vicente Pérez-Muñuzuri, Vicente Pérez-Villar</i>	
A Wiener process with Inverse Gaussian time distributed jumps as a model for neuronal activity	134
<i>Laura Sacerdote, Roberta Sirovich</i>	
Impulse propagation in interacting myelinated fibres	141
<i>Brunello Tirozzi, Enrico Rossoni, Sergiy Reutskiy</i>	
The evolution of mammalian cortical networks: computational advantages	148
<i>Alessandro Treves</i>	

Analysis of short time series with applications to neurobiology	154
<i>Alessandra Celletti, Alessandro E. P. Villa</i>	
On the relationship between interspikes interval distribution and boundary shape in the Ornstein-Uhlenbeck neuronal model	161
<i>Laura Sacerdote, Cristina Zucca</i>	
CELL SIGNALING AND CELLULAR ORGANIZATION	169
A kinetic theory approach for resolving the chemotactic wave paradox	171
<i>Yasmin Dolak, Christian Schmeiser</i>	
On some pattern forming effects in chemotaxis	178
<i>Dirk Horstmann</i>	
Structured cell growth models in a chemostat	186
<i>Valérie Lemesle, Jean-Luc Gouzé</i>	
Transmembrane adhesion protein and RGD-grafted biomaterial: a molecular approach to estimate cell adhesion strength	193
<i>Sara Mantero, Daniela Piuri, Simone Vesentini, Franco M. Montevecchi</i>	
Realistic description of single cluster calcium signalling	200
<i>Lars Meinhold</i>	
Mathematical modeling of the plant root as a water-pumping cellular system	206
<i>Alexander A. Stein, Sergey A. Logvenkov, Antonina T. Chalyuk</i>	
An Implementation of the VLUGR3 Solver for 3D-Simulation of the Reaction-Diffusion Processes in the Cardiac Dyad	213
<i>Ivan Valent, Alexandra Zahradníková, Ivan Zahradník</i>	
CARDIOVASCULAR SYSTEM	219
Non stationary model of the heartbeat time series in atrial fibrillation	221
<i>Camillo Cammarota, Giuseppe Guarini, Enrico Rogora, Maria Ambrosini</i>	
Modelling of complex behavior of the microvascular arterial network with cellular automata	227
<i>Eugene Nastenka, Vitaly Maksymenko, Yuri Belov, Alexander Kravchuk</i>	

Symmetric compressions of a fluid filled torus generates flow .	235
<i>Johnny T. Ottesen</i>	
Application of the one dimensional model for blood flow to the vascular prosthesis	242
<i>Irina Suroutsova</i>	
ECOLOGY	249
A game theoretic approach to conspecific brood parasitism ...	251
<i>Mark Broom, Graeme Ruxton</i>	
On some properties of an aquaculture plant dynamic model ..	255
<i>Bruno Buonomo, Salvatore Rionero</i>	
Phase Synchrony induced by Environmental Perturbations in Chaotic Populations	262
<i>Bernard Cazelles, Lewi Stone, Gérard Boudjema</i>	
On the Dynamics of a Predator-Prey Model with the Holling-Tanner Functionnal Response.....	270
<i>Madina Daher Okiye, M.A. Aziz-Alaoui</i>	
Semelparous species: switching between coexistence and exclusion.....	279
<i>Natalia Davydova</i>	
Individual-based model of plant communities	288
<i>Stefano Mazzoleni, Francesco Giannino, Mariana Amato, Riccardo Gucci, Gerardo Toraldo</i>	
N-species competitive Lotka-Volterra systems with adaptation	295
<i>Deborah Lacitignola, Claudio Tebaldi</i>	
Unifying evolutionary dynamics and a mathematical definition of selection	303
<i>Karen Page</i>	
Stochastic Boundedness in Biological Models	310
<i>Raffaello Seri, Christine Choirat</i>	
ENVIRONMENTAL SCIENCES.....	317
Effects of delays on an algal allelopathic competition in a chemostat-like environment	319
<i>Paolo Fergola, Edoardo Beretta, Marianna Cerasuolo</i>	
A Stage-structured Population Model	326
<i>Wendi Wang</i>	

EVOLUTION	333
Some theoretical developments on the number of ESSs of a matrix game	335
<i>Mark Broom</i>	
Axiomatic theory of evolution and proposal of a dynamical model	339
<i>Paolo Freguglia, Armando Bazzani</i>	
The Tangled Nature Model: from evolution to ecology with a special attention on interaction.	349
<i>Henrik Jeldtoft Jensen</i>	
Recovering genetic processes from phenotypic observation	356
<i>Inmaculada López, Manuel Gámez, Ramón Carreño, Zoltan Varga</i>	
The influence of convective effects on front propagation in certain diffusive models	362
<i>Luisa Malaguti, Cristina Marcelli</i>	
A density-dependent population dynamics model with offspring production at fixed ages and child care	368
<i>Vladas Skakauskas</i>	
IMMUNOLOGY	375
What is the basis of the immune system's specificity?	377
<i>Uri Hershberg, Sorin Solomon, Irun Cohen</i>	
Single vs multiple-encounter models for T cell selection	384
<i>Amikam Benouaich, Ramit Mehr</i>	
Mathematical modeling of radiation-induced autoimmunity ...	392
<i>Olga A. Smirnova</i>	
Environmental randomness and survival probability	403
<i>Giorgio Turchetti, Fabio Luciani, Luca Mariani</i>	
INDIVIDUAL BASED MODELS	411
On the temporal-spatial organisation of epithelial cell populations in-vitro	413
<i>Jörg Galle, Markus Loeffler, Dirk Drasdo</i>	
How local signaling affects cell movement	421
<i>Frithjof Lutscher</i>	

Effects of swimming on nutrient uptake by aquatic microorganisms.....	427
<i>Vanessa Magar, Timothy J. Pedley</i>	
Electron transfer and quantum yields of charge separation in bacterial photosynthetic reaction centers	434
<i>Richard Pincak, Michal Pudlak</i>	
INFECTIOUS DISEASES	441
Modelling optimal ages of vaccination for hepatitis A	443
<i>Marcos Amaku, Liz M. de Almeida, Raymundo S. Azevedo, Eduardo Massad, Francisco A. B. Coutinho</i>	
Pulse Vaccination Strategy in the SIR Epidemic Model in presence of Vaccine Failures.....	450
<i>Alberto d'Onofrio</i>	
Modeling of a disease evolution in a large branching population	457
<i>Christine Jacob, Anne-France Viet</i>	
A mathematical model for tick-borne infections: a numerical study	464
<i>Andrea Pugliese, Roberto Rosà, Mini Ghosh</i>	
The effects of drug treatment, birth rate and reproductive age on the vertical transmission of HIV	470
<i>Silvia Martorano Raimundo, Hyun Mo Yang</i>	
Steady and casual partners as sources of HIV infection among young homosexual men in Amsterdam	477
<i>Maria Xiridou, Mirjam Kretzschmar, Ronald Geskus, John de Wit, Roel Coutinho</i>	
MATHEMATICAL MODELING.....	483
A Numerical Scheme for a Size-Structured Cell Population Model	485
<i>Oscar Angulo, Juan Carlos López-Marcos</i>	
Group Classification and Exact Solutions of Non-Linear Diffusion Equation	497
<i>Ilya Kovalenko, Alexei Kushner</i>	
A differential algebra algorithm to test a priori global identifiability of nonlinear systems.....	503
<i>Maria Pia Saccomani, Stefania Audoly, Leontina D'Angiò</i>	

SHAPE AND PATTERNS	509
Cancer Diagnostics and Prognostics by Low Dimensional Adaptive Texture Features from Fractal Signature and Lacunarity Matrices	511
<i>Fritz Albregtsen, Birgitte Nielsen, Håvard E. Danielsen</i>	
Growth of endothelial cell networks and Burgers dynamics ...	518
<i>Andrea Gamba, Davide Ambrosi, Enrico Giraudo, Guido Serini, Luigi Preziosi, Federico Bussolino</i>	
Multiresolution nuclear morphometry of cancer cells	526
<i>Gabriel Landini</i>	
Epithelial tumour shape complexity: global and local fractal features	533
<i>Gabriel Landini</i>	
Branching and compactification in a model of coral growth: a critical reinvestigation of the effect of hydrodynamics	539
<i>Roeland Merks, Alfons Hoekstra, Jaap Kaandorp, Peter Slood</i>	
Heteroclinic solutions for a model of skin morphogenesis	545
<i>Kazimierz Piechór, Bogdan Kaźmierczak</i>	
Influence of the gravitational field on microtubule self - organization	552
<i>Stéphanie Portet, Jack Tuszynski</i>	
Pigmentation pattern formation in the butterfly wing of <i>Papilio dardanus</i>	558
<i>Toshio Sekimura, Anotida Madzvamuse, Andrew J. Wathen, Philip K. Maini</i>	
Synthesis of oxygenated enantiopure derivatives from aromatic and unsaturated compounds by oxygenases from <i>Pseudomonas</i> strains. Application of Shape Analysis to bioconversion rationalization.	564
<i>Giuseppina Bestetti, Patrizia Di Gennaro, Enrica Galli, Andrea Colmegna, Guido Sello, Fulvia Orsini, Silvana Bernasconi, Alessandra Micheletti, Maria Filomeno</i>	
STOCHASTIC MODELLING	577
Stochastic models for population dynamics with nonlinear interaction	579
<i>Flavius Guías</i>	

A nonlinear stochastic model used for the identification of a biological system	587
<i>Vassiliki Kotti, Alexandros Rigas</i>	
Multivariate Spatial Analysis of Plankton Count Data from Lake Trasimeno (Italy)	593
<i>Alessandro Ludovisi, Marco Minozzo, Piera Pandolfi, M. Illuminata Taticchi</i>	
TUMOR GROWTH AND THERAPY.....	601
Stability of the Tumour Shape in the Pre-angiogenic Stage of Growth Depends on the Migration Capacity of Cancer Cells..	603
<i>Andrey V. Kolobov, Andrey A. Polezhaev, Galina I. Solyanik</i>	
A Computational Model of Tumor Cords	610
<i>Claudia Acquisti, Marcello Buiatti, Giuseppe Mersi</i>	
A stochastic particle model for vasculogenesis: a multiple scale approach	616
<i>Daniela Morale</i>	
Multiphase Models of Tumor Growth: General Framework and Particular Cases.....	622
<i>Luigi Preziosi, Luigi Graziano</i>	
Clinical Application of a Mathematical Model for Glioma Growth and Invasion	629
<i>Kristin R. Swanson</i>	
COLOR PLATES.....	637
Index	651
