

Feynman Diagram Techniques in Condensed Matter Physics

A concise introduction to Feynman diagram techniques, this book shows how they can be applied to the analysis of complex many-particle systems, and offers a review of the essential elements of quantum mechanics, solid-state physics, and statistical mechanics.

Alongside a detailed account of the method of second quantization, the book covers topics such as Green's and correlation functions, diagrammatic techniques, superconductivity, and contains several case studies. Some background knowledge in quantum mechanics, solid-state physics, and mathematical methods of physics is assumed.

Detailed derivations of formulas and in-depth examples and chapter exercises from various areas of condensed matter physics make this a valuable resource for both researchers and advanced undergraduate students in condensed-matter theory, many-body physics, and electrical engineering. Solutions to exercises are made available online.

Radi A. Jishi is a Professor of Physics at California State University. His research interests centre on condensed matter theory, carbon networks, superconductivity, and the electronic structure of crystals.

9 781107 655331 >

1	A brief review of quantum mechanics	1
1.1	The postulates	1
1.2	The harmonic oscillator	10
	Further reading	13
	Problems	13
2	Single-particle states	18
2.1	Introduction	18
2.2	Electron gas	19
2.3	Bloch states	21
2.4	Example: one-dimensional lattice	27
2.5	Wannier states	29
2.6	Two-dimensional electron gas in a magnetic field	31
	Further reading	33
	Problems	34
3	Second quantization	37
3.1	N -particle wave function	37
3.2	Properly symmetrized products as a basis set	38
3.3	Three examples	40
3.4	Creation and annihilation operators	42
3.5	One-body operators	47
3.6	Examples	48
3.7	Two-body operators	50
3.8	Translationally invariant system	51
3.9	Example: Coulomb interaction	52
3.10	Electrons in a periodic potential	53

3.11	Field operators	57
	Further reading	61
	Problems	61
4	The electron gas	65
4.1	The Hamiltonian in the jellium model	66
4.2	High density limit	69
4.3	Ground state energy	70
	Further reading	76
	Problems	76
5	A brief review of statistical mechanics	78
5.1	The fundamental postulate of statistical mechanics	78
5.2	Contact between statistics and thermodynamics	79
5.3	Ensembles	81
5.4	The statistical operator for a general ensemble	85
5.5	Quantum distribution functions	87
	Further reading	89
	Problems	89
6	Real-time Green's and correlation functions	91
6.1	A plethora of functions	92
6.2	Physical meaning of Green's functions	95
6.3	Spin-independent Hamiltonian, translational invariance	96
6.4	Spectral representation	98
6.5	Example: Green's function of a noninteracting system	106
6.6	Linear response theory	109
6.7	Noninteracting electron gas in an external potential	114
6.8	Dielectric function of a noninteracting electron gas	117
6.9	Paramagnetic susceptibility of a noninteracting electron gas	117
6.10	Equation of motion	121
6.11	Example: noninteracting electron gas	122
6.12	Example: an atom adsorbed on graphene	123
	Further reading	125
	Problems	126
7	Applications of real-time Green's functions	130
7.1	Single-level quantum dot	130
7.2	Quantum dot in contact with a metal: Anderson's model	133
7.3	Tunneling in solids	135
	Further reading	140
	Problems	140

8	Imaginary-time Green's and correlation functions	143
8.1	Imaginary-time correlation function	144
8.2	Imaginary-time Green's function	146
8.3	Significance of the imaginary-time Green's function	148
8.4	Spectral representation, relation to real-time functions	151
8.5	Example: Green's function for noninteracting particles	154
8.6	Example: Green's function for 2-DEG in a magnetic field	155
8.7	Green's function and the \hat{U} -operator	156
8.8	Wick's theorem	162
8.9	Case study: first-order interaction	169
8.10	Cancellation of disconnected diagrams	174
	Further reading	176
	Problems	176
9	Diagrammatic techniques	179
9.1	Case study: second-order perturbation in a system of fermions	179
9.2	Feynman rules in momentum-frequency space	186
9.3	An example of how to apply Feynman rules	192
9.4	Feynman rules in coordinate space	193
9.5	Self energy and Dyson's equation	196
9.6	Energy shift and the lifetime of excitations	197
9.7	Time-ordered diagrams: a case study	199
9.8	Time-ordered diagrams: Dzyaloshinski's rules	204
	Further reading	210
	Problems	210
10	Electron gas: a diagrammatic approach	213
10.1	Model Hamiltonian	213
10.2	The need to go beyond first-order perturbation theory	214
10.3	Second-order perturbation theory: still inadequate	216
10.4	Classification of diagrams according to the degree of divergence	218
10.5	Self energy in the random phase approximation (RPA)	219
10.6	Summation of the ring diagrams	220
10.7	Screened Coulomb interaction	222
10.8	Collective electronic density fluctuations	223
10.9	How do electrons interact?	227
10.10	Dielectric function	229
10.11	Plasmons and Landau damping	234
10.12	Case study: dielectric function of graphene	239

	Further reading	244
	Problems	245
11	Phonons, photons, and electrons	247
11.1	Lattice vibrations in one dimension	248
11.2	One-dimensional diatomic lattice	252
11.3	Phonons in three-dimensional crystals	254
11.4	Phonon statistics	255
11.5	Electron–phonon interaction: rigid-ion approximation	256
11.6	Electron–LO phonon interaction in polar crystals	261
11.7	Phonon Green’s function	262
11.8	Free-phonon Green’s function	263
11.9	Feynman rules for the electron–phonon interaction	265
11.10	Electron self energy	266
11.11	The electromagnetic field	269
11.12	Electron–photon interaction	272
11.13	Light scattering by crystals	273
11.14	Raman scattering in insulators	276
	Further reading	281
	Problems	281
12	Superconductivity	284
12.1	Properties of superconductors	284
12.2	The London equation	289
12.3	Effective electron–electron interaction	291
12.4	Cooper pairs	295
12.5	BCS theory of superconductivity	299
12.6	Mean field approach	304
12.7	Green’s function approach to superconductivity	309
12.8	Determination of the transition temperature	316
12.9	The Nambu formalism	317
12.10	Response to a weak magnetic field	319
12.11	Infinite conductivity	325
	Further reading	326
	Problems	326
13	Nonequilibrium Green’s function	331
13.1	Introduction	331
13.2	Schrödinger, Heisenberg, and interaction pictures	332
13.3	The malady and the remedy	336
13.4	Contour-ordered Green’s function	341

13.5	Kadanoff–Baym and Keldysh contours	343
13.6	Dyson's equation	347
13.7	Langreth rules	349
13.8	Keldysh equations	351
13.9	Steady-state transport	352
13.10	Noninteracting quantum dot	360
13.11	Coulomb blockade in the Anderson model	363
	Further reading	366
	Problems	366
