Preface xv

Introduction xvii

Pandora's Box xviii

About the Book xxi

Part 1 About Our Brain: How Does It Work? 1

Chapter 1 The Biological Hardware (Hardmeat) 5

What About the Brain? 5

Gray Matter 7

White Substance 8

Copying the Wiring 10

The Basic Cell: The Neuron 12

The Constitution 12

Biochemical Activation of the Neuron 14

Redundancy, Troubles, and Repairs 15

Biological, Biochemical, and Electrical Logic 17

Transplants 18

Methods of Analysis 19

Direct Investigations 19

EEG and related devices 20

X-ray-related methods 23

Magnetic resonance imaging (MRI) 24

	Positron emission tomography (PET)	25
	Magnetoencephalography (MEG)	25
	Stimulation Methods	26
	Electroconvulsive thearapy (ECT)	26
	Transcranial magnetic stimulation (TMS)	26
	Pacemakers	27
	Disturbances in the Normality	27
	Internal Communication in the Brain	27
Chapter 2	The Biological Software (Softmeat)	29
	From Thales to Freud	29
	The Greek Philosophy	30
	Later on	33
	Nietzsche	34
	Spinoza and the Knowledge	35
	Kant	35
	Psychology, Psychoanalysis, and Psychiatry	36
	Psychology	36
	Psychoanalysis	37
	Psychiatry	38
	The Complexity of the Information Processing	39
	Neuronal Exchanges — Is It All in the Genome?	39
	Predeterminism, Randomness, and Necessity	40
	The Role of the Five Senses	41
	The Origin of the Exchanges	42
	Words in the Brain	43
	Sleep and Hypnosis	45
	Sleep	45
	Hypnosis	46
	The Experimental Tests	47
	Computational Neuroscience	49
Chapter 3	Be Aware of Consciousness	53
	Observed vs Observer	53
	Consciousness	54

Introspection 56
Neuropsychology 59
Cognitive Organization 61
Cognition 61
Memory and Oblivion 62
About Animals 64
Toward the Discovery of Consciousness 64
The Trial-and-Error Method 65
Troubles out of Control and Disorders 68
The Experimental Means 69
Human Logic and Intuition 70
Subconscious Consciousness 71
The Role of the Words 71
Intuition 73

Chapter 4 Transcendence 75
The Self, The Soul 76
Transcendence: Mathematics and Religions 77
The Mathematics 77
The numbers 77
The algebra 79
The Early Ages of the Religions 81
Nowadays, Modernity 82
Neurotheology — The Recess of the Divine? 84
Modeling a Brain 85
Growing a Brain 85
Is Emulating a Brain Thinkable? 87
What About the Computer? 88
Kurzweil, the Transcendent Man 88
Growing AI? 91

Part 2 Toward an Intelligent Computer 93

Chapter 5 The Origin of the Challenge 95
From the Transistor to Quantum Logic 95
What is the Computer Made of? 95

Binary Logic and Thereafter 99
Fuzzy Logic to Smoothen Decisions 101
Formal Logic 103
Supercomputers 104
Supercomputers — What for? 106
All-purpose supercomputers 106
Brain-devoted computers 107
Supercomputers — What are They Made of? 108
Supercomputers — Who Pays? 109
Blue Brain Project (BBP) 110
Brain initiative 111
Google brain 112
Baidu, the Google of China 113
The Brain/MINDS project 113
Toward Quantum Logic 114
Quantum Wells 115
Photonics 116
The Compatible Artificial Logic 117
Brain–Computer Interfaces 117
Chips for Brain Simulation 118
Computer's Challenges 119
Biology Turns to Electronics 119

Chapter 6 Artificial Intelligence 121
What is Intelligence? 121
What Is Intelligence Made of? 122
Intelligence and Communication 125
Distributed and Cumulative Intelligence 126
What is AI? 129
Compartments of AI 129
Super artificial intelligence 130
Narrow (or weak, or applied) intelligence 130
Friendly A1 131
Seed A1 131
Robotics 133
Deep Learning 135
What Else? 139

Dedicated Intelligent Systems 140
Perception Analysis 141
Vocal and Facial Recognition 142
The Virtual Reality to Come 143
Big Data 143
Big Data — Why and How? 144
Unexpected Results 145
The Dangers to Come from AI ? 145
Who Would Win? 145
Some Gathered Personal Opinions 147
What Could we Conclude from That? 149

Chapter 7 Toward an Intelligent Computer 151
Artificial Surroundings 152
Virtual and Augmented Reality 152
Connected Objects 154
The Internet, the Games, and the Social Networks 156
Toward a Superior Intellect 157
Cognitive Computing 157
Watson, the IBM's Star Story 158
Big Data is Coming 160
Coming Research Programs 161
Supercomputers — What for? 161
Neuromorphism 162
Brain Transfer? 164
A Copycat of the Brain? 164
Google Brain? 165
How to Train the Computer? 166
Would the HLCB have to be Taught about Every Human Behavior? 167

Part 3 How to Make All That Stuff Hold Together 169

Chapter 8 How to Make Man and Computer Cooperate 171
How do we Take Advantage of the Computer? 171

	Bio–Mineral Interfaces	171
	The Thought-Driven External Command	174
	The Internet and the Cloud	176
	Progress in Brain Surgery	176
	How can the Computer Benefit from an Improved Knowledge of the Brain?	178
	Changes are Already Underway	178
	Computers, Phones and the Like	178
	Google's Curiosity	179
	Virtual Reality	180
	Is Changing the Brain and the Mind Underway?	181
	Androids Already Exist, Even Though Not Yet Perfect	182
	About Bots and Androids	183
	At the very beginning	183
	A robot to replace man	185
	The humanlike androids	186
	All of that Has Been Partly Engaged	188
	Biological Cognition	192
	What to Do, and What for?	192
	Would the Computer be Able to Reciprocally control the Brain?	193
	All of that Has Been Partly Achieved but the Essential Remains Undone	194
Chapter 9	Copy the Brain or Search for a Better Solution?	195
	Is Our Brain to Change?	195
	About the Learning Mechanism	196
	The Brain (and Other) Competition	197
	Hybrid Thought	199
	The Biological Copy	200
	Making a Direct Copy of the Biological	200
	The Complexity	202
	Software Brain Emulation	203
	Low Level Emulation	203
	Are We Living in a Dream?	204

The Virtual Reality of Our World 205
Could the Computer Invent a New Model of the Brain? 206
Androids and Cyborgs 207
Androids 207
A Mix of Man and Machine — The Cyborg 209
Is Big Brother Already Here? 212
A Bit of Science Fiction Before Closing This Chapter 213

Chapter 10 Is Transhumanism a Realistic Future? 215
Where Did we Come From? Where are we Heading? 216
The Place of God in Humanity 216
Is God to Be Forgotten? 219
Trans- or Posthumanism? 222
The Improved Man 222
Longevity and Brain Sustaining 222
Brain Enhancement 223
Toward a Higher Intelligence? 224
Nick Bostrom Emphasizes World Domination by the Machines 224
Do We Take Ourselves to Be God? 225
Is the Computer Able to Create Intelligence? 226
What to Do with Humanity if the Brain is Overcome by AI? 226
The Global Brain at a World Scale 228
Homo-Googlus and the Hackers Toward a Singularity 228
Brain Hacking 229
The Cloud, a Distributed Intelligence 230
Global Brain Institute 232
The Energy 233

Conclusion 237
Who is Afraid of the Big Bad Computer? 237
The Invasive Computer 238
The Global Threat 239
