Chapter 1

by Marcia Kuperberg

Exploring the background, tools and techniques of computer animation	1
Introduction	2
Perception	3
The mechanism to make moving pictures	4
Birth of the movie industry	7
Traditional animation production techniques	8
2D computer animation	10
3D computer animation	11
Digital convergence	12
Animation: the art of making things move	15
Conclusion	26

Chapter 2

by Rob Manton

Understanding the technical constraints of creating for different digital media	27
Introduction	28
Some technical issues	30
Display devices	30
Bitmap images and vectors	31

Image size and resolution	36
Frame rate	37
Data rates and bandwidth	37
Compression	39
Types of software used in animation	41
Hand-drawn animation	43
Spline-based keyframe animation	43
2D morphing	44
Using ready-made animations	44
Output options	44
3D modeling and animation	45
Modeling techniques	47
Animating 3D worlds	50
Linked hierarchies	50
3D morphing	52
Procedural animation	52
Output options	52
Video editing and compositing tools	53
Delivering animation	53
Conclusion	56

Chapter 3

by Marcia Kuperberg

Techniques and stages of creating 3D computer animation	57
Introduction	58
Following the brief	60
Scheduling your work to deliver on time	60
Doing your research	60

Checking the proposed action from your storyboard before creating the model	61
Thinking about the most efficient way to make your models	62
Constructing the basic room	63
Paying attention to materials	73
Paying attention to lighting your scene	77
Fine-tuning the effects of lights used in your scene	84
Lighting setups	85
Using your camera effectively	86
Camera lenses	87
Using a number of cameras	87
Basic camera moves	87
Using your camera to explore the room	88
Creating camera moves	90

Chapter 4

by Alan Peacock

Animation for multimedia and new media	91
Introduction	92
Motivation and responsiveness: animated objects in multimedia	93
Changing moves: animation and interaction	95
Animation: an everyday experience	96
Early games and hypertext	96
Animation in iTV (interactive TeleVision)	100
Approaches and working methods	100
Rollovers, buttons and other responsive objects	108

GIF animation	112
Movable objects	115
Animated worlds	116
Conclusion	120

Chapter 5

by Martin Bowman

Creating artwork for computer games: from concept to end product	121
Introduction	122
How is a game made?	123
Animation in the computer games industry	128
Animation to game	135
What art positions are there in the games industry?	141
What skills do employers look for?	149
Conclusion	154

Chapter 6

by Marcia Kuperberg

tv case studies: looking behind the scenes at the creation of network idents and commercials	155
Introduction	156
TechTV	158
Moviepix	162
The Movie Network	166
Super Écran	166
Behind the scenes of Cingular Wireless	170
The making of Chrysler's 'Golden Gate'	179

Chapter 7

by Marcia Kuperberg

The art and craft of telling a story: narrative and characterization	191
Introduction	192
The importance of understanding filmic techniques when creating screen narrative	193
Audience perception	196
Narrative theory in practice	197
Using camera angles and framing to tell a story	203
The soundtrack	207
The storyboard	208
Characterization	210
Stylization and realism	212
CGI combined with live action	213
Character creations	214
Making your characters talk	217
Observation and inspiration	220
Conclusion	220

Chapter 8

compiled by Marcia Kuperberg

Project briefs, self-tests, tutorials and resources	221
Introduction	222
Self-test based on Chapter 1	222
Self-test based on Chapter 2	223
3D modeling project based on Chapter 3: creating a room	224

Self-test based on Chapter 4	225
Web tutorial rollover project based on Chapter 4	226
Self-test based on Chapter 5	231
Exercises and 3D modeling project tutorials based on Chapter 5	232
Exercises and projects based on Chapter 7	234
Exercises in characterization based on Chapters 1, 5 and 7	235
Useful online resources	237
Magazines	242
Books	243
Index	245
