

Contents

1 Overview of Research on Computer Animation and Related Topics	1
1.1 Key Frame Based Computer Animation	1
1.1.1 Basic Ideas and Numerical Techniques	1
1.1.2 Example of a Desktop System for Animation Generation: The Life Forms	2
1.2 Articulate Planning: Kinematics and Dynamics	3
1.3 Path Planning	5
1.4 Camera Planning	7
1.5 Music Planning	9
1.6 Natural Language Understanding and Story Analysis	12
1.6.1 Early Approach of Story Grammar	13
1.6.2 Scripts and Frames	15
1.6.3 The Plan Understanding Approach	16
1.6.4 The Story Structure	19
1.7 Plot Planning and Generation	21
1.8 Generate Computer Animation from Natural Language Instructions	23
1.9 Generate Animation from Natural Language Stories	26
 2 SWAN: Full Life Cycle Automation of Computer Animation	 29
2.1 An Overview of SWAN	29
2.1.1 How SWAN Was Born	29
2.1.2 The FLICA Methodology	29
2.1.3 Five Levels of Representation	30
2.2 Moon Light: The Natural Language Level Representation	31
2.2.1 The Limited Chinese Natural Language	31
2.2.2 Check the Validity of the Story Based on Commonsense Knowledge	31
2.3 Semantic Analysis and Its Representation	32
2.3.1 A Representation Based on Case Frames	32
2.3.2 A Short Introduction to the GF1 Syntax	33
2.3.3 The Roles	33
2.3.4 The Objects	35
2.3.5 The Environments	36
2.3.6 The Actions	37
2.3.7 An Example	37
2.4 Pragmatic Analysis and Qualitative Script Planning	39
2.4.1 Pragmatic Analysis	39

2.4.2 The Qualitative Planning.....	40
2.4.3 The Rainbow Language.....	42
2.4.4 Camera Planning and Light Planning.....	45
2.4.5 Light and Color Planning	46
2.4.6 An Example.....	47
2.5 Quantitative Planning and Representation.....	49
2.5.1 The Evergreen Language — Global Definition.....	49
2.5.2 The Evergreen Language — Detailed Definition.....	51
2.6 Geometric Planning	54
2.6.1 Layout Planning	54
2.6.2 Path Planning: The Tiger Planner.....	55
2.6.3 Path and Move Planning of Cameras	60
2.6.4 Modification of Objects	60
2.7 Summary, Acknowledgements, and Prospects	60
2.8 Notation Used in This Book	62
3 Understanding the Limited Chinese Natural Language	65
3.1 The Chinese Language.....	65
3.2 The Moon Light Language	67
3.2.1 Characters and Words	67
3.2.2 Syntactic Construction	69
3.2.3 The Syntactic Rules.....	73
3.3 Commonsense Knowledge Check and Unification Grammar	76
3.4 Semantic Disambiguation Based on Commonsense Knowledge.....	84
4 Story Understanding: The Theory.....	93
4.1 Story Representation and Parsing	94
4.1.1 Case Frame Forest.....	94
4.1.2 An Example of Story and Its Representation	96
4.1.3 Story Parsing Process	97
4.2 Forest Grammar	98
4.2.1 A General Introduction to Forest Grammar	98
4.2.2 Definition of Forest Grammar	98
4.2.3 A Classification of Forest Grammars	101
4.3 Story Parsing Grammar	102
4.3.1 Definition of Story Parsing Grammar	102
4.3.2 An Example of Story Parsing Grammar.....	104
4.4 Weak Precedence Story Parsing Grammar (WPSPG)	105
4.4.1 Definition of WPSPG.....	105
4.4.2 Syntactic Parsing Algorithm of WPSPG.....	110
4.4.3 An Example of Story Parsing.....	117
4.4.4 Data about Runtime Efficiency of the Syntactic Parsing of WPSPG	118
4.5 Story Parsing Grammar with Attributes.....	119
4.6 Conclusions.....	120

4.6.1 Story Parsing Grammar and Rumelhart's Story Grammar.....	120
4.6.2 From SPG to SPG with Attributes.....	121
4.6.3 Significance.....	122
5 Story Understanding: The Practice	123
5.1 Goal of Story Understanding	123
5.2 Story Graph: The Shallow Approach.....	126
5.3 The Temporal Grammar Approach.....	136
5.3.1 Deficiency of the Traditional Approaches.....	136
5.3.2 Introduction to Temporal Models.....	140
5.3.3 The Heuristic Temporal Forest Grammar.....	144
5.4 Abstract Representation: The Deep Approach.....	150
5.4.1 The Main Idea	150
5.4.2 Silver Beach: The Abstract Representation Language	152
5.4.3 Determine Story Patterns.....	155
5.4.4 Use Story Patterns to Determine Global Information.....	158
5.4.5 Construct New Patterns	161
5.5 Semantic Disambiguation Based on Deep Commonsense Reasoning....	164
5.5.1 The Anaphora Problem Revisited.....	164
5.5.2 A Solution Based on Deep Commonsense Knowledge.....	166
6 Plot Planning and Act Planning	173
6.1 A Knowledge Base of Dramas and Plots	174
6.1.1 A Hierarchy of Drama Agents and Plot Agents	175
6.1.2 Generalized Case Frames and Basic Plot Representation.....	176
6.2 Skeletal Plot Planning.....	191
6.2.1 Plot Planning through Inheritance and Instantiation.....	191
6.2.2 Plot Planning through Crossover and Mutation.....	200
6.2.3 Plot Planning through Abstraction and Partial Presentation.....	204
6.3 Qualitative Temporal Planning	207
6.3.1 A Notation for Time Representation in Plots	207
6.3.2 Plot Processing at Qualitative Temporal Level	209
6.4 Dividing the Story in a Series of Acts.....	212
6.5 Solving the Quantification Problem.....	213
6.5.1 Introduction	213
6.5.2 Commonsense Problems Relating to the Quantity	215
6.5.3 Principles of Quantity-Oriented Commonsense Reasoning	218
6.5.4 An Algorithm of Quantity Estimation	224
7 Director's Planning	229
7.1 The Mission of an Animation Director in SWAN	229
7.2 DPRS: A Language for Director Planning.....	231
7.2.1 Basic Scenarios of the Episodes	232
7.2.2 Additional Ingredients.....	235
7.2.3 Natural Environment	236
7.2.4 Background	236

7.2.5 Roles' Characteristics	237
7.2.6 Relation and Atmosphere among Roles	238
7.2.7 Director's Intention and Attitude.....	239
7.3 The Generation of Global DPRS	240
7.3.1 Determine the General Style of a Movie	241
7.3.2 Determine the Basic Rhythms	243
7.4. The Generation of Local GPRS	244
7.4.1 Divide the Story into Scenes	244
7.4.2 Determine Principal Roles in Each Scene	248
7.4.3 Determine the Basic Scenarios.....	248
7.5 Determine and Implement Abstract Ingredients	250
7.5.1 The Director's Attitude	250
7.5.2 Implement Abstract Ingredients	251
8 Camera Planning.....	255
8.1 The Camera Planning Language Morning Glow	255
8.2 The Work of Edit	256
8.3 The Routine Camera Statements.....	259
8.3.1 Classification of Routine Camera Statements	260
8.3.2 From DPRS to RCS (1): A Rough Generator of RCS.....	264
8.3.3 From DPRS to RCS (2): Ingredient Forest.....	266
8.3.4 From DPRS to RCS (3): The Case Based RCS Planner.....	269
8.3.5 The Virtual Ingredient Forest	272
8.4 High Level Camera Primitives.....	274
8.4.1 Overview	274
8.4.2 Syntax of HLCP	276
8.4.3 From RCS to HLCP	281
8.5 The Basic Camera Primitives.....	283
9 Light, Color, and Role Planning	287
9.1 Light Planning	287
9.1.1 Glorious: A Language for Light Planning	287
9.1.2 Sublanguage Dragon: General Light Effect Specification	288
9.1.3 Sublanguage Poplar: Particular Light Effect Specification	292
9.1.4 Generation of Dragon and Poplar Specifications	298
9.1.5 Sublanguage BLP: Light Source Specification	300
9.1.6 A Wide Spectrum Language	302
9.2 Color Planning	304
9.2.1 The Importance of Color Use.....	304
9.2.2 Jade: A Language for Color Requirement Planning.....	305
9.2.3 Generation of Jade Statements	311
9.3 Role Portraying	312
9.3.1 Behavior Planning	312
9.3.2 Outlook Planning.....	313

10 Knowledge Base and Libraries.....	315
10.1 The Pangu Commonsense Knowledge Base.....	315
10.1.1 Commonsense Knowledge and Commonsense Knowledge Bases.....	315
10.1.2 Characteristic Features of Pangu.....	317
10.1.3 The Agent Architectures and Their Function Layers	317
10.1.4 The Ontology Structure of Pangu.....	324
10.1.5 The Working Mechanism of Pangu.....	326
10.2 The Swanlake Knowledge Base.....	328
10.3 The Element Library.....	328
10.3.1 The Element Archive.....	328
10.3.2 The Element Index	330
10.4 The Structure Library.....	330
10.4.1 Definition of a Structure.....	330
10.4.2 The Structure Index	333
10.4.3 The Structure Forest	333
10.5 The Character Library.....	335
10.5.1 Character Archive.....	335
10.5.2 The Indices	337
10.5.3 The Cloth Library.....	338
10.6 The Action Library	338
10.6.1 Context Sensitivity of Verb Meanings	338
10.6.2 Consistency of Concurrent Actions.....	339
10.6.3 The Action Archive	342
10.7 Bit Image Libraries	345
10.7.1 The Gold Fish Content Based Background Library	345
10.7.2 The Duckweed Facial Expression Library	347
Appendix	351
References	363
Part One	363
Part Two.....	371
Part Three	373
Index	375
