Introduction to Volume 1	1
Introduction to Behavioral Economics and the Book Volumes	6
1 Some antecedents of behavioral economics	8
2 On methodology in economics	9
3 The experimental method in economics	15
3.1 Experiments and internal validity	16
3.2 Subject pools used in lab experiments	18
3.3 Stake sizes in experiments	19
3.4 The issue of the external validity of lab findings	19
3.5 The role of incentives in economics	21
3.6 Is survey data of any use?	24
3.7 Replications in experimental economics	26
4 Approach and organization of the book	27
5 Five theoretical approaches in behavioral economics	32
5.1 A case study of prospect theory	32
5.2 Human sociality and inequity averse preferences	39
5.3 The quasi-hyperbolic model and self-control problems	43
5.4 Level-k and CH models: disequilibrium in beliefs in strategic interaction	46
5.5 The heuristics and biases program: radical behavioral economics	51
6 Five examples of behavioral evidence	55
6.1 Does competitive market equilibrium survive fairness considerations?	55
6.2 Why do we not let bygones be bygones?	58
6.3 Are financial markets efficient?	61
6.4 Is expert behavior consistent with neoclassical economics?	63
6.5 Do people play a mixed strategy Nash equilibrium?	64
7 Appendix A: The random lottery incentive mechanism	66
8 Appendix B: In lieu of a problem set	66
References for Introduction	72
1 The Evidence on Human Choice under Risk and Uncertainty	85
1.1 Introduction	85
1.2 The elements of classical decision theory	86
1.2.1 Preference foundations of expected utility theory (EU)	87
1.2.2 Attitudes to risk under EU	89
1.3 Subjective expected utility theory (SEU)	91

1.4	Eliciting the utility function under EU	94
1.4.1	The case of known probabilities	94
1.4.2	The case of unknown probabilities	96
1.5	Violations of expected utility theory	97
1.5.1	Violations of the independence axiom	98
1.5.2	The probability triangle and violations of the axioms of rationality	101
1.5.3	Some attempts to relax the independence axiom	103
1.5.4	Attitudes to risk for small and large stakes: Rabin's paradox	106
1.5.5	Violations of description invariance	109
1.5.6	Preference reversals	109
1.5.7	Is the reduction axiom supported by the evidence?	110
2	Behavioral Models of Decision Making	112
2.1	Introduction	112
2.2	Probability weighting functions	118
2.2.1	Prelec's probability weighting function	121
2.2.2	Stochastic dominance under non-linear probability weighting	125
2.3	Rank dependent utility theory (RDU)	126
2.3.1	Attitudes to risk under RDU	127
2.3.2	RDU under uncertainty	130
2.3.3	Drawbacks of RDU	131
2.4	Prospect theory (PT)	132
2.4.1	A brief note on PT under uncertainty	136
2.4.2	Attitudes to risk under prospect theory	137
2.4.3	A violation of EU and RDU that can be explained by PT	140
2.4.4	Some erroneous criticisms of PT	140
2.5	Elicitation of utility and probability weighting functions in PT	142
2.5.1	Elicitation of the utility function under PT	142
2.5.2	Elicitation of loss aversion under PT	146
2.5.3	Elicitation of the probability weighting function under PT	148
2.6	The axiomatic foundations of PT	150
2.6.1	Foundations of PT in terms of the trade-off consistency method	150
2.6.2	Foundations of the Prelec weighting function	152
2.6.3	Foundations of the power form of utility	153
2.7	Third generation PT and stochastic reference points	154
2.8	Stochastic reference points in PT under rational expectations	156
2.8.1	An example of a choice acclimating equilibrium (CPE): The newsvendor problem	163
2.8.2	An example of an unacclimating personal equilibrium (UPE): The taxi drivers' problem	166
2.8.3	Some empirical evidence for Köszegi–Rabin preferences	170
2.9	Limitations of PT	175
2.9.1	The evidence and critique from configural weights models	175
2.9.2	Violations of gain–loss separability	176
2.9.3	Interaction between probability weights and stake sizes	177
2.9.4	Heterogeneity in preferences	181

2.10	A selection of other behavioral theories	183
2.10.1	Regret theory	183
2.10.2	The theory of disappointment aversion	184
2.10.3	Salience and context in decision theory	186
2.10.4	Case-based decision theory	189
2.10.5	Configural weights models	190
2.11	Human behavior for extreme probability events	193
2.11.1	Original prospect theory (OPT)	194
2.11.2	The evidence on behavior under low probability events	195
2.11.3	Composite Prospect Theory	198
2.12	Risk preferences and time preferences	201
2.12.1	Can non-linear probability weighting explain temporal behavior under risk?	202
2.12.2	Intertemporal risk aversion	208
2.12.3	An agenda for the future	209
2.12.4	Delay dependence and probability weighting	210
2.12.5	Probability weighting and process dependence	212
3	Applications of Behavioral Decision Theory	215
3.1	Introduction	215
3.2	The endowment effect and exchange asymmetries	219
3.2.1	Loss aversion and the endowment effect	222
3.2.2	Is there any risk aversion beyond loss aversion?	224
3.2.3	Market experience and loss aversion	227
3.2.4	Subject misinterpretation as explanation of exchange asymmetries	231
3.2.5	Other implications/explanations of the endowment effect	233
3.3	Prospect theory preferences in primates	238
3.4	Myopic loss aversion	241
3.5	Why do people pay taxes?	245
3.6	Explanation of Rabin's paradox using PT	250
3.7	Goals as reference points	253
3.7.1	A theory of goals in prospect theory	253
3.7.2	The evidence on goals	256
3.8	Why is it so hard to find a taxi on a rainy day in New York?	258
3.9	Some implications of inverse S-shaped weighting functions	265
3.10	Contracts as reference points	266
3.10.1	A simple model	267
3.10.2	Empirical evidence for contracts as reference points	272
3.11	Moral hazard, loss aversion, and optimal contracts	275
3.12	Renegotiation, long-term contracts, and loss aversion	281
4	Human Behavior under Ambiguity	287
4.1	Introduction	287
4.2	A problem for SEU: The Ellsberg paradox	289
4.3	Neoclassical models of ambiguity	291
4.3.1	Choquet expected utility	292
4.3.2	Models of multiple priors	294

4.3.3	Two-stage recursive models and failure of compounding	296
4.3.4	The smooth ambiguity aversion model	298
4.3.5	A brief note on the related literature	300
4.3.6	Some empirical evidence on ambiguity aversion	301
4.4	Behavioral models of ambiguity	304
4.4.1	Support theory	304
4.4.2	Prospect theory, source-dependent uncertainty, and ambiguity	307
5	A Guide to Further Reading	313
5.1	Evidence on decision making under risk and uncertainty	313
5.2	Models of behavioral decision theory	315
5.3	Behavioral economics of ambiguity	316
5.4	Exercises for Volume 1	320
	<i>References for Volume 1</i>	327
	<i>Author Index</i>	347
	<i>Subject Index</i>	354
