Acknowledgment....7
Abstract....9
1 Introduction....11
2 State of the art....13
2.1 Fiber reinforced cementitious composites....13
2.2 Modeling of mechanical behavior of high performance cementitious composites....17
2.2.1 Micromechanical models....17
2.2.1.1 Dominant mechanisms and microstructures of tensile behavior....17
2.2.1.2 Analytical models of tensile behavior....18
2.2.1.3 Numerical models of tensile behavior....19
2.2.1.4 Compressive behavior....19
2.2.2 Modeling at structural level....19
3 A new analytical model for ECCs' structural behavior....23
3.1 Shortcomings of existing models....23
3.2 Elastic pre-cracking state....24
3.3 Post-cracking state....24
3.3.1 Multiple cracking in ECC....24
3.3.1.1 Microscopic fracture phenomena....24
3.3.1.2 Macroscopic stress and strain....25
3.3.1.3 Macroscopic constitutive law....26
3.3.2 Localized tensile cracks....34
3.3.2.1 Softening criterion....34
3.3.2.2 Cracking strain....35
3.3.2.3 Tension softening relationship....36
3.3.2.4 Shear bridging stresses....37
3.3.3 ECC/concrete interface cracks....37
3.4 Compression....39
3.5 Finite element implementation....40
3.5.1 Crack opening model....41
3.5.2 Crack sliding model....41
3.5.3 Interface crack model....42
3.6 Model validation....44
3.6.1 Shear beams....44

3.6.2 Interfacial fracture....54
4 Computational simulations of ECC performance in structural applications....59
4.1 ECC panel for anti-seismic retrofit of reinforced concrete structures....59
4.1.1 Anti-seismic retrofit method....59
4.1.2 Structural requirements....60
4.1.3 Material selection....61
4.1.4 Finite element analysis....61
4.1.4.1 Finite element model....61
4.1.4.2 Performance of ECC panel....62
4.1.4.3 Performance of a quasi-brittle material....69
4.1.5 Summary and discussion of results....71
4.2 ECC-based repair of protective cover layer....72
4.2.1 Introduction....72
4.2.2 Problem formulation....72
4.2.3 Moisture transport analysis....72
4.2.4 Fracture analysis model....74
4.2.5 Results....74
4.3 Analytical study of energy dissipation associated with crack growth....81
4.3.1 Introduction....81
4.3.2 Characterization of crack growth resistance in pseudo strain-hardening cementitious composites....81
4.3.2.1 Fracture energy and R-curve....81
4.3.2.2 Characterization under small-scale yielding conditions....82
4.3.3 Material model....83
4.3.4 Analysis of composite fracture energy under small-scale yielding conditions....84
4.3.4.1 Computation of R-curve: FE model and solution procedure....84
4.3.4.2 Analysis of macrocrack propagation....86
4.3.4.3 Parametric study....88
4.3.5 Final remarks....89
5 Summary and concluding remarks....93
6 References....95
