Introduction	6
1. Flood generation processes on plots, hillslopes and in headwater catchments – an overview	8
2. Description of the flooding problem from the soil perspective	16
3. State of flooding as soil threat.....	19
4. Climatic, physiographic and anthropogenic drivers and interactions: flooding of soils.....	24
5. Indicators on floods and flooding.....	31
6. Methods to assess the susceptibility and intensity of flooding of soils	38
7. Flooding on soils and interactions with other soil threats	45
8. Interactions of flooding and associated with soil functions	51
9. Conclusions and implications for future research.....	55
References.....	60
