

Table of Contents

1	Introduction	1
	Bibliography	5
2	Small molecule activation and inactivation by metalloenzymes and their model compounds	7
	Learning targets	7
	Background	7
	Experiment	13
	Objectives	13
	Materials	13
	Evaluation of results	16
	Variations of the experiment	17
	Additional questions	17
	Bibliography	17
3	Carbon monoxide and nitric oxide as small molecule messengers	19
	Learning targets	19
	Background	19
	Experiment	25
	Objectives	25
	Materials	25
	Evaluation of results	27
	Variations of the experiment	28
	Additional questions	29
	Bibliography	29
4	Metallointercalators as DNA probes	31
	Learning targets	31
	Background	31
	Experiment	38
	Objectives	38
	Materials	38
	Evaluation of results	44
	Variations of the experiment	45
	Additional questions	46
	Bibliography	46

5	DNA manipulation with metal complexes	49
	Learning targets	49
	Background	49
	Experiment	58
	Objectives	58
	Materials	58
	Evaluation of results	64
	Variations of the experiment	65
	Additional questions	65
	Bibliography	65
6	Synthesis of metal-peptide bioconjugates	67
	Learning targets	67
	Background	67
	Experiment	76
	Objectives	76
	Materials	76
	Variations of the experiment	81
	Spreadsheet	82
	Additional questions	83
	Bibliography	84
7	Preparation of metal-protein bioconjugates	87
	Learning targets	87
	Background	87
	Experiment	92
	Objectives	92
	Materials	92
	Analysis of the results	95
	Variations of the experiment	98
	Additional questions	99
	Bibliography	99
8	Electrochemical investigation of metal complexes	101
	Learning targets	101
	Background	101
	Experiment	109
	Objectives	109
	Materials	109
	Evaluation of results	112
	Variations of the experiment	113
	Additional questions	113
	Bibliography	114

9	Metal complexes with anti-proliferative activity	115
	Learning targets	115
	Background	115
	Experiment	124
	Objectives	124
	Materials	124
	Evaluation of results	128
	Variations of the experiment	128
	Additional questions	130
	Bibliography	131
	Glossary	133
	Index	137
