<i>Preface</i>	page ix
1 Introduction	1
1.1 Structural criteria	3
1.2 Modern analysis	5
1.3 The elastic solution	8
1.4 Plastic theory	10
2 Structural Theory of Masonry	12
2.1 The voussoir arch	15
2.2 The geometrical factor of safety	20
2.3 The master 'safe' theorem	22
2.4 Settlement and cracking	23
2.5 Time scale for settlement	24
2.6 Models	25
3 Domes	27
3.1 The dome as a membrane	28
3.2 Stresses in shells	30
3.3 The uniform hemispherical dome	31
3.4 Cracking of domes	35
3.5 The minimum thickness of a hemispherical dome	39
3.6 Incomplete hemispheres	41
3.7 Segmental domes	46
4 The Masonry Vault	48
4.1 The barrel vault	48
4.2 The cross-vault	51
4.3 Vault thrusts	55
4.4 Ungewitter's tables	62
4.5 The pathology of the quadripartite vault	66

4.6	Superimposed loads on vaulting	71
4.7	The sexpartite vault	73
4.8	The fan vault	75
5	Some Structural Elements	83
5.1	The wall	83
5.2	The pier	86
5.3	The pinnacle	88
5.4	The flying buttress	91
5.5	The tas de charge	106
6	Towers and Bells	109
6.1	The Campanile in Venice	109
6.2	Collapses at Beauvais, 1284 and 1573	111
6.3	The crossing tower	118
6.4	The effects of bell-ringing	121
6.5	Wind loads	125
7	Spires	127
7.1	The spire tip	129
7.2	The spire as a conical shell	131
7.3	The octagonal spire	133
7.4	Leaning spires	136
7.5	Timber spires	137
8	Some Historical Notes	139
8.1	Villard de Honnecourt(1)	139
8.2	Before Villard	141
8.3	Villard(2)	143
8.4	The expertises at Milan	143
8.5	The Renaissance	150
	<i>Bibliography</i>	155
	<i>Index</i>	159
