

ATLAS OF HUMAN CRANIAL MACROMORPHOSCOPIC TRAITS

By Joseph T. Hefner and Kandus C. Linde

The *Atlas of Human Cranial Macromorphoscopic Traits* synthesizes macromorphoscopic traits and their analysis in an accessible manner, providing detailed descriptions and examples of the various character state manifestations intended for use in classrooms, laboratories, and in the field.

The volume begins with a thorough outline of the macromorphoscopic dataset: its history in forensic anthropology, the recent modification of the historical approach, and recent technological and analytical advances. Following this introduction, individual macromorphoscopic traits will be detailed which include (1) Nomenclature, (2) Gross anatomy, (3) Function, (4) Methodology, (5) Line drawings, (6) Detailed definitions, (7) Multiple high-resolution photographs, and (8) Within Population Variation Data from the Macromorphoscopic Databank (MaMD). The volume concludes with a chapter outlining the statistical analysis of macromorphoscopic data and a summary of computer programs and reference databases available to forensic anthropologists for the analysis of these data.

The *Atlas of Human Cranial Macromorphoscopic Traits* is a one of a kind resource for those in forensic and bioarchaeological research.

Key Features:

- First volume of its kind providing detailed descriptions, illustrations, and high-resolution images of various character state manifestations of 17 macromorphoscopic traits
- Applies to both forensic and bioarchaeological research
- Written by the foremost expert on macromorphoscopic trait analysis and the estimation of ancestry in forensic anthropology

About the Authors:

Joseph T. Hefner, PhD

Dr. Hefner is an assistant professor of anthropology, Michigan State University, United States. He received his PhD from the University of Florida, Gainesville. Dr. Hefner is considered one of the world's foremost experts on macromorphoscopic trait analysis and the estimation of ancestry in forensic anthropology. His research interests include human variation, skeletal biology, forensic anthropology, quantitative methods, human osteology, human anatomy, nonparametric statistics, geometric morphometrics, categorical data analysis, and classification statistics.

Kandus C. Linde

Ms. Linde is an archaeologist, technical editor, writer, and freelance photographer. She received her BA in anthropology from Utah State University, Logan. Her research bridges two fields: anthropology and art, with a particular insight on photographing the nuances of the human skeleton. Her artistry spans many mediums, but she considers her son, Milo, to be her greatest masterpiece.
