

# About the Contents

*All chapters have been written in consultation with Michael Schwartz*

<i>About the Author</i>	ix
<i>Acknowledgements</i>	x
<i>Foreword</i>	xii
<i>Preface</i>	xiv
<i>Terminology</i>	xv
<b>1 Introduction</b>	<b>1</b>
<b>2 Basic measurements</b>	<b>8</b>
<b>3 The conventional gait model</b>	<b>29</b>
<b>4 Alternatives to the conventional gait model</b>	<b>50</b>
<b>5 Advanced processing techniques</b>	<b>65</b>
<b>6 Electromyography</b>	<b>71</b>
In consultation with Adam Shortland	
<b>7 Clinical video</b>	<b>88</b>
In consultation with Adrienne Harvey and Jill Rodda	
<b>8 Physical examination</b>	<b>100</b>
In consultation with Pam Thomason and Jill Rodda	

9	General measures of walking ability	120
10	Relationships between data of different types	136
11	Quality assurance	151
12	Interpretation and reporting	164
	In consultation with Jennifer McGinley, Fiona Dobson and Pam Thomason	
13	Accuracy and measurement variability	177
	In consultation with Jennifer McGinley	
14	How to set up a clinical gait analysis service	190
15	How to set up and maintain a gait analysis laboratory	198
	<i>Appendix 1: Limitations of the conventional subdivision of the gait cycle</i>	216
	<i>Appendix 2: Other measures of repeatability</i>	218
	<i>Index</i>	223
