

Contents

1	The Facilities Design Function	3
	Definition of Facilities Design • Scope • Importance • Facilities Design and Productivity • Objectives of Facilities Design • Functions and Activities • The Continuing Need for Facilities Design Work • The Enterprise Design Process • The Facilities Design Process • Types of Layout Problems • The Marks of a Good Layout • The Layout Function • The Position of the Layout Department in Different Organizations • Organization of the Layout Department • Relationship Between Layout and Other Departments	
2	Overview of Facilities Design Procedure	25
	Factors for Consideration in Facilities Design • Facilities Design as a Coordinating Function • The Facilities Design Procedure	
3	Preliminary Enterprise Design Activities	34
	Basic Data Required for Facilities Design • Sources of Basic Data • Management Policy • Feasibility Studies • Market Research • Sales Forecasting • Product Engineering • The Powrarm	
4	Designing the Process	48
	The Production Design Procedure • Factors for Consideration in Process Design • Preliminary Production Planning • Product Analysis • Make-or-Buy Analysis • Methods of Production • The Unit Process Concept • The Process Design Procedure • Computerized Process Planning	
5	Designing Material Flow	91
	The Overall System Flow Cycle • Advantages of Planned Material Flow • The Need for a Master Flow Pattern • Factors for Consideration • Material or Products • Moves • Handling Methods • Processes • Building • Site • Personnel • Flow Planning Criteria • Flow Possibilities • General Flow Patterns • Designing the Flow Pattern	
6	Conventional Techniques for Analyzing Material Flow	122
	Sources of Data Required • Flow Planning and Analysis Techniques • Assembly Chart • Operation Process Chart • Multi-Product Process Chart • String Diagram • Process Chart • Flow Diagram • Flow Process Chart • From-To Chart • Procedure Chart • Critical Path Method (CPM)	
7	Quantitative Techniques for Analyzing Material Flow	155
	Approaches • Linear Programming • Assignment Problem • Transportation Problem • Transshipment Problem • The Traveling Salesman Problem • Integer Programming • Dynamic Programming • Level Curve Technique • Queuing Theory • Conveyor Analysis • Simulation	

8	Planning Activity Relationships	200
	Types of Activity • Selection of Activity Centers • Types of Relationships • Factors Affecting Relationships • Degrees of Activity Interrelationship • The Activity Relationship Chart • Constructing the Activity Relationship Chart • The Activity Relationship Diagram	
9	Production and Physical Plant Services	211
	Receiving • Storage • Storage Planning • Warehousing • Shipping • Tool Room and Tool Crib • Production-Supervision Offices • Other Service Activities • Handling-Equipment Storage • Parking Facilities	
10	Administrative and Personnel Services	234
	Selected Service Activities • Offices • Health and Medical Facilities • Food Service • Lavatories and Locker Rooms • Miscellaneous Personnel Services	
11	Space Determination	248
	Factors for Consideration in Space Planning • Offices • Receiving • Storage • Production • Warehousing • Shipping • Parking • Other Auxiliary and Service Activities • Establishing Total Space Requirements	
12	Area Allocation	288
	Factors for Consideration • Expansion • Planning for Expansion • Flexibility • Use of All Levels • Inter-Building Handling • Point-of-Use Storage • Resolving Factors in Area Allocation • Aisles • Column Spacing • The Area Allocation Procedure • The Plot Plan • Long-Range Planning	
13	Computerized Facilities Layout	323
	Historical Background • Why Quantitative Techniques • Criteria for a Computerized Layout Program • Computerized Layout Programs • Advantages and Limitations of Programs • Comparison of Computerized Layout Techniques • The Future of Quantitative Techniques	
14	Introduction to Material Handling	338
	Material Handling Interests and Activities • Objectives of Material Handling • The Material Handling Equation • Principles of Material Handling • The Unit Load Concept	
15	Material Handling Equipment	351
	The Place of Equipment in the Handling System • Basic Handling Equipment Types • Basic Handling Systems • Common Material Handling Equipment: I. Conveyors • II. Cranes, Hoists, Monorails • III. Industrial Trucks • IV. Auxiliary Equipment	

16	Designing the Handling System	382
	Designing the Handling System into the Layout	
17	Constructing the Layout	392
	Methods of Constructing the Layout • Plant Layout Tools and Techniques • Model and Template Standards • Layout Construction Procedure • Master Plans • The Key Plan • Finishing Up • Flow Lines • Checking the Layout	
18	Evaluating and Implementing the Layout	416
	Evaluating the Layout • Qualitative Evaluation Techniques • Efficiency Indices • Cost Evaluation of Layouts • Quantitative Evaluation Techniques • Evaluation Procedures • Making the Alterations • Presenting the Layout to Management • Displaying the Layout • The Follow-up • Approval • Reproducing the Layout • Installing the Layout • CPM and PERT • Making the Move	
19	Facility Location	456
	Pitfalls in Site Selection • The Need for Guidelines • Basic Data Required • The General Procedure • Industrial Parks
