

CONTENT

INTRODUCTION 6

1 ANALYSIS OF THE CURRENT SITUATION 7

 1.1 Complexity and complex systems 7

 1.2 Selected methods for solving complex systems 8

 1.3 Social policy and quality of life..... 11

2 THE AIMS OF DISSERTATION THESIS 12

3 QUANTIFICATION OF COMPLEX VARIABLES 13

4 MODEL FOR QUALITY OF LIFE EVALUATION IN THE CZ' REGIONS 16

 4.1 Describe of model..... 17

 4.2 Finding for quality of life evaluation 19

 4.3 Data matrices for quality of life evaluation..... 19

 4.4 Methods for quality of life evaluation 19

 4.5 Suggestion for allowance for development 21

5 QUALITY OF LIFE EVALUATION IN THE CZ' REGIONS 22

 5.1 Finding indicators for quality of life evaluation in the CZ' regions 23

 5.2 Problem solution, analyses and comparison..... 25

 5.3 Suggestion for allowance as decision support..... 27

CONCLUSIONS..... 30

REFERENCES 32

LIST OF SELECTED AUTHOR’S PUBLICATIONS..... 36

LIST OF FIGURES

Figure 1: General scheme of recommendations for proposal of methodology for quantification of complex systems 13

Figure 2: Evolution process as approach Evolutionary principle..... 14

Figure 3: General scheme of model for quality of life evaluation..... 18

Figure 4: Fuzzy sets for quality of life evaluation - areas. 20

Figure 5: Fuzzy sets for total quality of life evaluation..... 21

Figure 6: Intersection of areas between approaches 25

LIST OF TABLES

Table 1: Suggestion for allowance as decision support..... 21

Table 2: Results of survey - regions 22

Table 3: Official indicators - approach WoC (example) 24

Table 4: Areas evaluation with fuzzy TOPSIS method - WoC approach 25

Table5: Quality of life evaluation with fuzzy TOPSIS method - WoC approach..... 26

Table 6: Sensitivity analysis of IMP approach in FIS method 27

Table 7: Entropy of results for CBR method - comparison of approaches	27
Table 8: Comparison of suggestion for allowance (in %)	28
Table 9: Total results of suggestion for allowance	29
Table 10: Suggestion for allowance.....	29
