<i>Preface</i>	page xi
<i>Acknowledgments</i>	xiv
1 Introduction	1
1.1 Thesis and Antithesis	1
1.2 Evolutionary Synthesis of the 1930s and 1940s	7
1.3 Quantification of Rates	9
1.4 Punctuated Evolution from Lyell to Modern Times	14
1.5 Thesis and Antithesis: Quantitative Comparison	22
1.6 Outline of the Following Chapters	24
1.7 Summary	25
2 Variation in Nature	26
2.1 Quantification of Human Variation	27
2.2 Probability and the Law of Error	31
2.3 The Normal Curve	34
2.4 Logarithms and Coefficients of Variation	36
2.5 Arithmetic Normality versus Geometric Normality	37
2.6 Applications of Normality and Lognormality	45
2.7 Summary	52
3 Evolutionary Time	53
3.1 Time and Scale in Biology	53
3.2 Timescale of Natural Selection	54
3.3 Generation Times	55
3.4 Ecological and Evolutionary Time	61
3.5 Microevolution and Macroevolution	61
3.6 Models of Evolutionary Time and Form	63
3.7 Summary	63

4	Random Walks and Brownian Diffusion	64
4.1	Rates and Axis-Labeling Conventions	65
4.2	Random Walks	66
4.3	Brownian Diffusion	72
4.4	Ornstein–Uhlenbeck Random Walks	74
4.5	Note on Mean Absolute Deviations and Standard Deviations	77
4.6	Summary	78
5	Temporal Scaling and Evolutionary Mode	79
5.1	Temporal Scaling of Differences and Rates	80
5.2	Robust Linear Modeling	87
5.3	Temporal Scaling: Modes of Change	89
5.4	Temporal Scaling: Rates of Change	100
5.5	Fractal Geometry of Evolutionary Time Series	104
5.6	Cross-Sectional Rates	105
5.7	Summary	108
6	Directional Selection, Stabilizing Selection, and Random Drift	110
6.1	Directional Selection	110
6.2	Stabilizing Selection	118
6.3	Random Drift	120
6.4	Summary	122
7	Phenotypic Change in Experimental Lineages	124
7.1	Experiments with Maize or Corn, <i>Zea mays</i>	125
7.2	Experiments with Fruit Flies, <i>Drosophila</i> Species	132
7.3	Experiments with Domestic Chickens, <i>Gallus gallus</i>	138
7.4	Experiments with Laboratory Mice, <i>Mus musculus</i>	143
7.5	Discussion	147
7.6	Summary	155
8	Phenotypic Change Documented in Field Studies	157
8.1	Observational Studies: Longitudinal with Respect to Time	159
8.2	Observational Studies: Cross-Sectional with Respect to Time	196
8.3	Experimental Field Studies	202
8.4	Discussion	205
8.5	Summary	214
9	Phenotypic Change in the Fossil Record	216
9.1	Geological Timescale	217
9.2	Longitudinal Studies in the Fossil Record	217

9.3	Discussion	256
9.4	Summary	269
10	A Quantitative Synthesis	270
10.1	The Lamarck–Darwin Thesis and the Lyell–Linnaeus Antithesis	270
10.2	Source for a Dichotomous Distribution of Rates	272
10.3	A Unified Perception of Rates and Change	274
10.4	Evolution in an Environmental Context	275
10.5	Quantitative Synthesis	275
10.6	Summary	277
11	Retrospective on Punctuated Equilibria	279
11.1	Rereading Eldredge and Gould (1972)	279
11.2	Punctuated Equilibria and the Bryozoan <i>Metrarabdotos</i>	288
11.3	Objections to Temporal Scaling of Evolutionary Rates	292
11.4	Summary	297
12	Genetic Models	298
12.1	Natural Selection and Random Drift in Phenotypic Evolution	298
12.2	Random Drift and Mutation	303
12.3	Discussion	309
12.4	Summary	310
13	Independent Contrasts: Phylogeny's Influence on Phenotypes	312
13.1	Random Walks and Brownian Diffusion	313
13.2	Carnivores and Ungulates: Worked Examples	314
13.3	Discussion	323
13.4	Summary	324
14	Rate Perspective on Early Bursts of Evolution	325
14.1	Comparative Approach to Early Bursts	325
14.2	Rates of Evolution in Darwin's Finches	326
14.3	Forward Modeling of Brownian Diffusion	330
14.4	Forward Modeling of Ornstein–Uhlenbeck Diffusion	331
14.5	Forward Modeling of Diffusion with a Declining Step Rate	332
14.6	Discussion	334
14.7	Summary	335
15	Summary and Conclusions	336
15.1	Variation, Time, and Random Walks	336
15.2	Temporal Scaling	337
15.3	Selection and Drift	338

15.4	Evolution in the Laboratory, Field, and Fossil Record	338
15.5	Quantitative Synthesis	339
15.6	Consequences	339
15.7	Epilogue	340
	Appendix	341
	References	351
	Index	372
10.1	The Lamarck-Darwin Thesis and the Self-Limiting Analogy	10.1
10.2	Source for a Dictionary: Distribution of Rates	10.2
10.3	A Unified Perception of Rates and Change	10.3
10.4	Evolution in an Environmental Context	10.4
10.5	Quantitative Synthesis: A Modern Evolutionary Model	10.5
10.6	Summary	10.6
11.1	Retrospective on Punctuated Equilibria	11.1
11.2	Rereading Eldredge and Gould (1972)	11.2
11.3	Punctuated Equilibria and the Modern Synthesis	11.3
11.4	Objections to Temporal Scaling of Evolutionary Rates	11.4
12.1	Genetic Models	12.1
12.2	Natural Selection and Random Drift in Phenotypic Evolution	12.2
12.3	Stabilizing Selection	12.3
12.4	Random Drift	12.4
13.1	Independent Contrasts: Phylogeny's Influence on Phenotypes	13.1
13.2	Random Walks and Brownian Diffusion	13.2
13.3	Carnivores and Ungulates: Worked Examples	13.3
13.4	Discussion	13.4
14.1	Experiments with Domestic Chickens, <i>Gallus gallus</i>	14.1
14.2	Experiments with Laboratory Mice, <i>Mus musculus</i>	14.2
14.3	Rate Perspective on Early Bursts of Evolution	14.3
14.4	Comparative Approach to Early Bursts	14.4
14.5	Rates of Evolution in Darwin's Finches	14.5
14.6	Forward Modeling of Brownian Diffusion	14.6
14.7	Forward Modeling of Ornstein-Uhlenbeck Diffusion	14.7
14.8	Forward Modeling of Diffusion with a Declining Step Rate	14.8
14.9	Discussion	14.9
15.1	Summary	15.1
15.2	Summary and Conclusions	15.2
15.3	Variation, Time, and Random Walks	15.3
15.4	Temporal Scaling	15.4
15.5	Selection and Drift	15.5
