

Contents

Preface	xiii	III. BIOSYNTHESIS OF STEROIDS	36
About the Cover	xv	A. Introduction	36
		B. Properties Steroidogenic Enzymes	39
Chapter 1 Hormones: An Introduction		C. Biosynthesis of Pregnenolone and Progesterins	49
I. OVERVIEW OF HORMONES	1	D. Biosynthesis of Adrenal Cortex Mineralocorticoids, Glucocorticoids, and Some Androgens	50
A. Introduction	1	E. Biosynthesis of Androgens	50
B. Review of Animal Cell Structure	2	F. Biosynthesis of Progesterone and Estrogens	50
C. Hormones and Their Communication Systems	5	G. Biosynthesis of Vitamin D Metabolites	51
D. Biosynthesis of Peptide and Protein Hormones	6	H. Biosynthesis of Bile Acids	51
E. Regulation of Hormone Synthesis, Secretion, and Serum Levels	8	IV. SERUM BINDING PROTEINS FOR STEROID HORMONES	51
II. HORMONE RECEPTORS	9	A. Introduction	51
A. Introduction	9	B. Serum Binding Proteins for Steroid Hormones	52
B. Membrane Receptors	10	Further Reading	53
C. The Nuclear Receptor Family	12		
D. Measurement of Hormone-Receptor Interactions	14	Chapter 3 The Hypothalamus and Anterior Pituitary	
III. MECHANISMS OF HORMONE ACTION	16	I. INTRODUCTION	55
A. Cell Signaling by Membrane Receptors	16	A. Overview and CNS Control of the Hypothalamus	55
B. Regulation of Gene Transcription by Steroid Hormones	20	B. Hypothalamic Control of the Pituitary Gland	55
C. Membrane-Initiated Actions by Steroid Hormones	21	C. Pituitary Control of Distal Endocrine Glands	57
IV. CLINICAL ASPECTS	22	D. Neuroendocrine Axis Feedback	58
Further Reading	25	II. ANATOMICAL RELATIONSHIPS	58
Chapter 2 Steroid Hormones: Chemistry, Biosynthesis, and Metabolism		A. Hypothalamic-Pituitary Anatomy	58
I. INTRODUCTION	27	B. Hypothalamic Neural Connections	59
A. General Comments	27	C. Hypothalamic-Pituitary Circulatory System	60
B. Historical Perspective	27	III. STRUCTURE, SYNTHESIS, SECRETION, AND TARGET CELLS OF THE HYPOTHALAMIC RELEASING HORMONES	60
C. Radioactive Steroids	28	A. Thyrotropin-Releasing Hormone	61
D. Molecular Biology Contributions	28	B. Gonadotropin-Releasing Hormone	63
II. CHEMISTRY OF STEROIDS	28	C. Corticotropin-Releasing Hormone	64
A. Basic Ring Structure	28	D. Hypothalamic Control of Growth Hormone Secretion	65
B. Classes of Steroids	28	E. Hypothalamic Control of Prolactin Secretion	66
C. Structural Modification	30		
D. Asymmetric Carbons	30		
E. Conformational Flexibility of Steroids	32		
F. Other Steroid Structures	35		

IV. CHEMISTRY OF THE ANTERIOR PITUITARY HORMONES	66
A. Glycoprotein Hormones	66
B. Growth Hormone	67
C. Prolactin	67
D. POMC Derivatives: ACTH, α -MSH, β -Lipotropin, Endorphin	68
V. REGULATION AND BIOLOGICAL ACTIONS OF GROWTH HORMONE AND PROLACTIN	69
A. Growth Hormone	69
B. Prolactin	74
VI. THE HYPOTHALAMUS AND APPETITE REGULATION	76
VII. CLINICAL ASPECTS	77
A. Hypothalamus	77
B. Pituitary	77
Further Reading	79

Chapter 4 Posterior Pituitary Hormones

I. INTRODUCTION	81
II. ANATOMY OF THE POSTERIOR PITUITARY	81
III. CHEMISTRY, BIOSYNTHESIS, AND SECRETION OF THE POSTERIOR PITUITARY HORMONES	81
A. Structures of Oxytocin and Vasopressin	81
B. Synthesis and Secretion of Vasopressin and Oxytocin	83
IV. BIOLOGICAL ACTIONS OF ARGININE VASOPRESSIN (AVP)	84
A. AVP Receptors	84
B. AVP Regulation of Water Handling	84
C. Cardiovascular Effects of AVP	84
D. Effects of AVP on Glucose Homeostasis	85
E. Effects of AVP on ACTH Secretion	85
F. AVP and the Brain	86
V. BIOLOGICAL ACTIONS OF OXYTOCIN	86
A. The Oxytocin Receptor	86
B. Oxytocin and Parturition	86
C. Oxytocin and Lactation	87
D. Oxytocin and the Brain	87
VI. CLINICAL ASPECTS	87
A. Oxytocin	87
B. Diabetes Insipidus	88
Further Reading	88

Chapter 5 Thyroid Hormones

I. INTRODUCTION	89
A. The Thyroid Gland and Its Hormones	89
B. Iodine Metabolism	89
II. ANATOMY OF THE THYROID GLAND	90
III. CHEMISTRY OF THE THYROID HORMONES	91
IV. SYNTHESIS AND SECRETION OF THYROID HORMONES	91
A. The Thyroid Epithelial Cell	91
B. Thyroglobulin	92
C. Iodide Uptake: The Na^+/I^- Symporter	93
D. Thyroid Peroxidase and DUOX: Tyrosine Iodination and Coupling	94
E. Thyroglobulin Storage, Endocytosis, and Breakdown	95
F. Secretion of T_4 and T_3 and Recycling of I^-	96
G. Transport and Metabolism of Thyroid Hormones	96
H. Antithyroid Drugs	98
V. REGULATION OF THYROID HORMONE SECRETION	99
A. The Hypothalamic-Pituitary-Thyroid Axis	99
B. Autoregulation	100
C. Effects of TSH on the Thyroid Epithelial Cell	100
VI. BIOLOGICAL ACTIONS OF T_3	101
A. Thyroid Hormone Receptor	101
B. Membrane Mediated Actions of Thyroid Hormone	103
C. Basal Metabolic Rate and Thermogenesis	103
D. Metabolic Actions	104
E. Neurodevelopment	104
VII. CLINICAL ASPECTS	104
A. Clinical Features of Hyper- and Hypothyroidism	104
B. Hyperthyroidism: Etiology and Treatment	106
C. Hypothyroidism: Etiology and Treatment	106
Further Reading	107

Chapter 6 Pancreatic Hormones: Insulin and Glucagon

I. INTRODUCTION	109
A. Background Information	109

B. Regulation of Blood Glucose	109	E. Bombesin and Related Peptides: Gastrin Releasing Peptide and Neuromedin C	157
C. Nutritional and Metabolic Interrelationships	111	F. Tachykinin Family: Substance P and Neurokinins A and B	158
II. ANATOMICAL, MORPHOLOGICAL, AND PHYSIOLOGICAL RELATIONSHIPS	113	G. Neurotensin	159
A. Anatomy of the Hepatopancreatic Complex	113	H. Calcitonin Gene-Related Peptide Family: Amylin	160
III. CHEMISTRY, BIOCHEMISTRY, AND BIOLOGICAL ACTIVITIES OF THE PANCREATIC HORMONES	116	I. Enteroglucagon and Oxyntomodulin	160
A. Insulin	116	J. Motilin	161
B. Glucagon and Glucagon-like Peptides	124	K. Somatostatin	162
C. Insulin and Glucagon Collaborations	128	L. Gastric Acid Secretion	162
D. Leptin	132	M. Ghrelin, Leptin, and Energy Use	164
E. Other Pancreatic Hormones	135	IV. CLINICAL ASPECTS	168
IV. CLINICAL ASPECTS	136	A. Peptic Ulcer Disease	168
A. Diabetes Mellitus	136	B. Carcinoid Syndrome	168
Further Reading	138	C. Zollinger-Ellison Syndrome	169
		Further Reading	169

Chapter 7 Gastrointestinal Hormones

I. INTRODUCTION	141	I. INTRODUCTION	171
A. Background	141	II. STRUCTURE AND NOMENCLATURE OF EICOSANOIDS	172
B. Resume of the Gastrointestinal Hormones	141	III. SYNTHESIS AND INACTIVATION OF EICOSANOIDS	172
C. Problems of Food Processing and Digestion	143	A. Overview of Eicosanoid Synthesis	172
II. ANATOMICAL AND PHYSIOLOGICAL RELATIONSHIPS	143	B. Phospholipase A ₂	174
A. Gastroenteropancreatic System	143	C. Prostaglandin H Synthase/ Cyclooxygenase	177
B. Stomach	145	D. Cyclooxygenase Inhibitors	178
C. Small Intestine and Colon	147	E. Lipoxygenase	178
D. Hormone-Secreting Cells: Their Distribution in the Gastroenteropancreatic Complex	148	F. Transport and Inactivation of Prostanoids	180
E. Pancreatic, Biliary, and Intestinal Secretions	149	IV. EICOSANOID RECEPTORS AND SIGNALING	181
F. Coordination of Gastroenteropancreatic Hormone Release	151	V. EXAMPLES OF BIOLOGICAL ACTIONS OF PROSTAGLANDINS	181
G. Motor Functions of the Intestinal Tract	152	A. Prostacyclin and Thromboxane in the Vasculature	182
H. Brain-Gut Axis	153	B. Prostaglandins in the Kidney	182
III. BIOCHEMICAL PROPERTIES AND MOLECULAR ACTIONS	153	C. Prostaglandins and Pain Perception	183
A. General Relationships	153	D. Prostaglandins in Reproduction	184
B. Cholecystikinin/Gastrin Family	154	VI. CLINICAL ASPECTS	185
C. Secretin Family: Secretin, Vasoactive Intestinal Peptide	156	A. Prostaglandins and Cancer	185
D. Pancreatic Polypeptide Family: Peptide YY and Neuropeptide Y	157	B. Leukotrienes in Human Disease	186
		Further Reading	187

Chapter 8 Eicosanoids

Chapter 9 Calcium-Regulating Hormones: Vitamin D, Parathyroid Hormone, Calcitonin, and Fibroblast Growth Factor 23

I. INTRODUCTION	189
A. Background Information	189
B. Calcium and Phosphorus Homeostasis	190
II. ANATOMICAL AND PHYSIOLOGICAL RELATIONSHIPS	192
A. Intestine	192
B. Bone	192
C. Kidney	195
D. Parathyroid Gland	195
E. Calcitonin-Secreting Cells	195
III. CHEMISTRY AND BIOCHEMISTRY	196
A. Vitamin D and $1\alpha,25(\text{OH})_2\text{D}_3$	196
B. Parathyroid Hormone	198
C. Parathyroid Hormone-Related Protein	200
D. Calcitonin	201
E. Fibroblast Growth Factor 23	202
IV. BIOLOGY AND MOLECULAR ACTIONS	202
A. Parathyroid Hormone Receptor and Biological Actions	202
B. Parathyroid Hormone-Related Protein Receptor and Biological Actions	203
C. Calcitonin Receptor and Biological Actions	205
D. Vitamin D Receptor and Biological Actions	206
E. Fibroblast Growth Factor-23	213
F. Integrated Actions of $1\alpha,25(\text{OH})_2\text{D}_3$, PTH, Calcitonin, and FGF23 on Bone Remodeling and Calcium Homeostasis	215
V. CLINICAL ASPECTS	217
A. Vitamin D Nutrition	217
B. Osteoporosis	218
C. Tuberculosis	219
D. Parathyroid Hormone	219
E. Parathyroid Hormone-Related Protein	220
F. Calcitonin	220
G. FGF23	220
Further Reading	221

Chapter 10 Adrenal Corticoids

I. INTRODUCTION	223
A. Background	223
B. Glucocorticoids	223
C. Mineralocorticoids	223

II. ANATOMY	224
A. Adrenal Cortex	224
B. Liver	225
III. BIOCHEMISTRY AND BIOSYNTHESIS OF ADRENAL STEROIDS AND TESTOSTERONE STEROIDS	225
IV. BIOLOGICAL AND MOLECULAR ACTIONS OF GLUCOCORTICOIDS	227
A. Hypothalamic-Pituitary-Adrenal Axis	227
B. Corticotropin-Releasing Hormone	227
C. Transport of Glucocorticoids in the Blood (CBG)	227
D. ACTH Modes of Action	230
E. Glucocorticoids and Stress	231
F. Immunosuppression and Apoptosis Induced by Glucocorticoids	233
G. Feedback Effects of Glucocorticoids	233
H. Glucocorticoid Receptor	234
I. Dehydroepiandrosterone and <i>Zona Reticularis</i>	234
V. CLINICAL ASPECTS	234
A. Cushing's Disease	234
B. Addison's Disease	235
C. Congenital Adrenal Hyperplasia and Others	236
D. Mifepristone (RU-486)	236
Further Reading	238

Chapter 11 Hormones of the Adrenal Medulla

I. INTRODUCTION	239
II. ANATOMICAL AND PHYSIOLOGICAL RELATIONSHIPS	239
A. The Adrenal Gland	239
B. The Adrenal Medulla and the Sympathetic Nervous System	240
C. Chromaffin Cells of the Adrenal	242
III. CHEMISTRY AND BIOCHEMISTRY OF THE CATECHOLAMINES	242
A. Biosynthesis and Secretion of Catecholamines	242
B. Regulation of Catecholamine Synthesis and Secretion	243
C. Catabolism of Catecholamines	246
D. Pharmacology of Catecholamines	247
IV. BIOLOGICAL ACTIONS OF CATECHOLAMINES	248
A. Adrenergic Receptors	248
B. Biological Responses to Epinephrine	248

V. CLINICAL ASPECTS	251
A. Pheochromocytoma	251
B. Chronic Stress	253

Further Reading	253
-----------------	-----

Chapter 12 Androgens

I. INTRODUCTION	255
II. ANATOMY OF THE MALE REPRODUCTIVE SYSTEM	255
A. Testes, Ducts, and Accessory Structures	255
B. Seminiferous Tubules	257
C. Leydig/Interstitial Cells	257
III. CHEMISTRY AND METABOLISM OF ANDROGENS	257
A. Androgens and Related Molecules	257
B. Androgen Biosynthesis	260
C. Modification of Testosterone in Target Tissues	260
D. Sex Hormone-binding Globulin	262
E. Catabolism of Androgens	262
IV. REGULATION OF ANDROGEN PRODUCTION	262
A. Hypothalamic-Pituitary-Testes Axis: Hormonal Control of the Testis	262
B. Hypothalamic-Pituitary-Testis Axis: Feedback Control	264
C. Prolactin	265
V. BIOLOGICAL RESPONSES TO ANDROGENS	265
A. The Androgen Receptor	265
B. Sexual Differentiation	266
C. Puberty	268
D. Spermatogenesis	270
E. Estrogens in Males	271
F. Androgens in Females	271
VI. CLINICAL ASPECTS	272
A. 5 α -Reductase Deficiency	272
B. Androgen Insensitivity Syndrome	272
C. Androgen Abuse	272
D. Prostate Cancer	272
Further Reading	273

Chapter 13 Estrogens and Progestins

I. INTRODUCTION	275
II. ANATOMY OF THE FEMALE REPRODUCTIVE SYSTEM	275
A. Components of the Female Reproductive System	275

B. The Ovarian Follicle and Corpus Luteum	277
---	-----

III. CHEMISTRY AND METABOLISM OF FEMALE STEROID HORMONES	281
A. Female Steroid Hormones	281
B. Synthesis of Progesterone and Estrogens	281
C. Catabolism of Progesterone and Estrogens	282

IV. HYPOTHALAMIC-PITUITARY-OVARY AXIS	283
A. Introduction	283
B. Control of the Ovary by the Hypothalamus and Pituitary	284
C. Feedback Effects on the Hypothalamus and Pituitary	286
D. The Human Menstrual Cycle	286
E. Menopause	289

V. BIOLOGICAL RESPONSES TO FEMALE SEX STEROIDS	289
A. Estrogen and Progesterone Receptors	289
B. Uterine Effects of Estrogen and Progesterone	291
C. Effects of Estrogen on Bone	292
D. Estrogen and the Cardiovascular System	293
VI. CLINICAL ASPECTS	293
A. Hormonal Contraception	293
B. Postmenopausal Hormone Replacement Therapy	295
C. Polycystic Ovary Syndrome (PCOS)	295

Further Reading	296
-----------------	-----

Chapter 14 Hormones of Pregnancy, Parturition, and Lactation

I. INTRODUCTION	297
II. ANATOMICAL RELATIONSHIPS AND THE BEGINNING OF PREGNANCY	298
A. Fertilization	298
B. Implantation	299
C. Placental Development	300
D. Mammary Glands	302
III. CHEMISTRY, BIOCHEMISTRY, AND ACTIVITY OF THE HORMONES OF PREGNANCY	302
A. Human Chorionic Gonadotrophin	303
B. Placental Lactogen and Placental Growth Hormone	304
C. Other Peptide Hormones	305

D. Steroid Hormones	306
E. Maternal Adaptations to Pregnancy	307
IV. PARTURITION	308
A. Introduction	308
B. Progesterone and Estrogen	309
C. The Fetal Adrenal, Placenta, and Posterior Pituitary	310
V. LACTATION	311
A. Mammogenesis	311
B. Lactogenesis	312
C. Suckling	313
VI. CLINICAL ASPECTS	314
A. Assisted Reproductive Technology	314
B. Breast Cancer	317
Further Reading	319

Chapter 15 Hormones Related to the Kidney and Cardiovascular System

I. INTRODUCTION	321
A. Background	321
II. ANATOMICAL, MORPHOLOGICAL, AND PHYSIOLOGICAL RELATIONSHIPS	322
A. The Kidney	322
B. Cardiovascular System	326
III. HOMEOSTASIS OF FLUID, ELECTROLYTES, AND BLOOD PRESSURE	326
A. Introduction	326
B. Renin-Angiotensin II	328
C. Angiotensins I and II	328
D. Aldosterone Biosynthesis and Actions in Renal Tubular Reabsorption	331
E. Atrial Natriuretic Protein System	331
F. Endothelins	336
G. Nitric Oxide System	339
H. Kallikreins and Kinins	341
I. Adrenomedullin	341
J. Summary	343
IV. HORMONES AND BLOOD CELL PRODUCTION	343
A. Introduction	343
B. Process of Erythropoiesis	344
C. Erythropoietin (the Protein)	344
D. Hemoglobin	346
V. CLINICAL ASPECTS	346
A. Anemia	346
B. Cardiovascular Events in Hypertension	348

Further Reading	348
-----------------	-----

Chapter 16 The Pineal Gland

I. INTRODUCTION	351
II. ANATOMICAL FEATURES OF THE PINEAL GLAND	352
A. Anatomical Location and Cellular Composition	352
B. Connection with the Visual System	352
III. SYNTHESIS AND SECRETION OF MELATONIN	352
A. Melatonin Biosynthetic Pathway: Catabolism	352
B. Patterns and Regulation of Melatonin Secretion	354
IV. BIOLOGICAL ACTIONS OF MELATONIN	357
A. The Melatonin Receptors	357
B. Sleep and Jet Lag	358
C. Adrenal Cortex	359
D. Reproduction	359
E. Cancer	360
F. Melatonin as an Antioxidant	360
V. CLINICAL ASPECTS	360
Further Reading	361

Chapter 17 Growth Factors

I. INTRODUCTION	363
II. EPIDERMAL GROWTH FACTOR	363
A. Structure and Synthesis	363
B. EGF Receptors and Signaling	364
III. FIBROBLAST GROWTH FACTOR FAMILY	365
A. Members of the FGF Family	365
B. The FGF Receptors and Signaling	369
IV. PLATELET DERIVED GROWTH FACTORS	370
A. Structure of PDGFs	370
B. PDGF Receptors and Signaling	371
V. INSULIN-LIKE GROWTH FACTORS	373
A. Structure of IGF1 and IGF2	373
B. Insulin and IGF Receptors and Signaling	373
C. IGF Binding Proteins	375

VI. TRANSFORMING GROWTH FACTOR β	376	Appendix A	381
A. Structure and Secretion of TGF β	376	Appendix B	387
B. TGF β Receptors and Signaling	376	Appendix C	391
VII. CLINICAL ASPECTS	378	Appendix D	393
		Appendix E	395
		Appendix F	397
Further Reading	379	Index	399
