<i>Abbreviations</i>	ix
<i>Preface</i>	xi
Chapter 1. General introduction	1
Chapter 2. The development of AI and robots	5
I. Historical developments	5
II. Various uses of AI and robots	7
III. Impact of the use of AI and robots on the economy	8
Chapter 3. Definition of AI and robots	13
I. In general	13
II. Definition of robots for tax purposes	15
Chapter 4. Robots as new legal persons	17
I. Conditions for a legal personality	17
II. Conditions for a tax capacity of robots	21
A. Introduction	21
B. Various definitions of robots for tax purposes	22
C. Robots as a taxable entity	22
D. Principle of fairness and equity in taxing robots	23
Chapter 5. The case for a robot tax	25
I. Introduction	25
II. Arguments against a robot tax	26
A. Introduction	26
B. Difficulties in defining robots	26
C. Distortions or risks of double taxation	27
D. Negative effect on innovation and investment	29
E. Practical and implementation issues	30
F. Competition and tax avoidance problems	31
III. Justification of a robot tax	32
A. Introduction	32

B. Economic justification	32
C. Legal justification	34
Chapter 6. Current income (profit) taxation of robots	44
I. Introduction	44
II. Domestic rules	45
A. Introduction	45
B. Robots used in corporations	45
C. Robots used in enterprises (including independent individuals)	48
D. Robots used by private individuals	48
III. International aspects	49
A. In general	49
B. Permanent establishment under the traditional definition	49
C. The evolution of the permanent establishment concept further to the OECD/G20 BEPS Initiative	54
Chapter 7. Development of the taxation of the digital economy and its impact on the taxation of robots	61
I. Introduction	61
II. Current works at the OECD and UN level	62
III. The EU proposals	64
A. Introduction	64
B. Corporate taxation of a significant digital presence	65
C. Digital services tax (DST)	68
IV. Unilateral measures	70
A. In general	70
B. Alternative applications of the permanent establishment threshold	71
C. The use of withholding taxes	72
D. The use of turnover taxes (equalization levies)	72
E. Specific regimes targeting large MNEs	73
F. Excursus: changes in the taxation of interstate e-commerce in the United States	74
V. Analysis from a policy perspective	75
A. Introduction	75
B. Digital permanent establishment	76
C. Withholding taxes	79
D. Introducing specific taxes on digital transactions	79
VI. Impact on the taxation of AI and robots	80
A. In general	80

B. Taxation of the digital economy as an alternative tax on AI and robotics?	84
Chapter 8. VAT on robots' activities	87
I. Robot transactions subject to VAT	87
II. The principles governing taxation of electronic transactions	88
III. Application of EU VAT rules	89
A. In general	89
B. Taxable persons	89
C. The taxable transaction: supply of goods and/or services	91
D. The place of supply	93
E. Exemptions	106
F. Right to deduct input VAT	106
IV. VAT in Switzerland	107
A. In general	107
B. Application to robots	109
V. Conclusion	110
Chapter 9. The design of a robot tax	112
I. Introduction	112
II. Taxation of the use of robots	114
A. Robot usage tax	114
B. Automation taxes	120
C. Indirect robot tax by limitation of deductions	124
D. Pigouvian taxes	125
E. Adjusting the social security tax	126
F. Adjusting the VAT	128
G. An object tax on robots	129
H. A fee as a consideration for using robots	130
III. A tax on robots as taxpayers	131
A. Introduction	131
B. Robot income or revenue tax	133
C. Robots' owners: a robot capital tax	134
D. Robots subject to VAT	135
E. Robots as consumers	136
F. Robots subject to social security	137
G. Summary	137
IV. Other strategies: changing the tax system	139
A. Increasing the corporate tax rate	139
B. Increasing the taxation of capital income	140
C. Taxing the digital economy	141

Chapter 10. Robot taxes from an international perspective	143
I. Trends	143
II. Treaty aspects	144
A. Introduction	144
B. Robot users' taxes	144
C. A tax on robots	149
III. The need for an international coordination of rules	155
A. Introduction	155
B. Domestic coordination	157
C. International coordination	158
Chapter 11. Financing the disruption and automation costs (notably universal basic income)	160
I. Introduction	160
II. Financing education, training and reconversion	160
III. Universal basic income (UBI)	161
A. The concept	161
B. Historical development	162
C. Concrete examples	163
D. Argument pros and cons	164
E. Variations	166
Chapter 12. General findings and conclusion	167
<i>Bibliography</i>	176
