Continues of Grachulants	2006 Selection in Evolutionary Transition
P. G.	. Heritable Capacifies of Single Cells
Preface	IX Reconsidering Adaptedness and Filmess
Acknowledgments	vx any frequinions in Evolution (Vice
CHAPTER 1	
The Language of Selection	anoice state to ocitate 3
Plan of the Book	3
Darwinian Dynamics	5
Major Evolutionary Transitions	7 Prequency-Dependent Sciention
Cooperation and Conflict	8
Fisherian Fitness	9
Deconstructing Fitness	11 matericy Dependence Decemper 74
Selection as Fitness Covariance	13 Organism Levelonstrand) to policial 13
Mathematical Models	16
Adequacy Criterion for Understa	inding Fitness 18
Definitions of Basic Concepts	815 volution of Multicelluler Organizms
Chapter 2	
Origin of Fitness	19
Complementarity	19
Spontaneous Creation	20
Self-Replication and the Origin of	
Replicator Dynamics	20
Design Analysis of Molecular Re	
Life History Evolution	22
Survival of the Fittest	25
Survival of Anybody	26
Overview of the Origin of Fitness	
Chapter 3	
The First Individuals	29
Origin of Gene Networks	29
Cooperation and Conflict	32
Survival of the First	33
Evolutionary Transitions Are Inh	
Origin of Hypercycles	35

vii

CONTENTS

Kin Selection in Evolutionary Transitions4Conflict Mediation through Individuality4Further Evolution of the Cell4Heritable Capacities of Single Cells4Reconsidering Adaptedness and Fitness4Early Transitions in Evolution4CHAPTER 4Evolution of Interactions4Gene Frequency Change4Population Growth5Frequency-Dependent Selection5Constant Selection5Sconstant Selection5Selection as Covariance5Fisher's Fundamental Theorem5Evolution of Multicellular Organisms6Kin Selection6Game Theory7Modification of Genetic Constraints7Population Dynamics and Natural Selection7Spatial Structure and the Evolution of Cooperation7The Problem of Frequency Dependence8CHAPTER 56Multilevel Selection of the Organisms8A Model for the Emergence of Organisms8Within-Organism Mutation Selection Model8	Quasispecies	37
Conflict Mediation through Individuality4Further Evolution of the Cell4Heritable Capacities of Single Cells4Reconsidering Adaptedness and Fitness4Early Transitions in Evolution4CHAFTER 4Evolution of Interactions4Gene Frequency Change4Population Growth5Frequency Dependent Selection5Constant Selection5Adaptive Topography5Frequency Dependence Decouples Fitness in a Selection Hierarchy5Selection as Covariance5Fisher's Fundamental Theorem5Evolution of Multicellular Organisms6Kin Selection7Modification of Genetic Constraints7Population Dynamics and Natural Selection7Friess Minima7Prisoner's Dilemma7Spatial Structure and the Evolution of Cooperation7The Problem of Frequency Dependence8CHAPTER 58Multilevel Selection of the Organisms8A Scenario8A Model for the Emergence of Organisms8Kinhin-Organism Mutation Selection Model8	Population Structure	39
Further Evolution of the Cell 4 Heritable Capacities of Single Cells 4 Reconsidering Adaptedness and Fitness 4 Early Transitions in Evolution 4 CHAPTER 4 2 Evolution of Interactions 4 Gene Frequency Change 4 Population Growth 5 Frequency-Dependent Selection 5 Constant Selection 5 Adaptive Topography 5 Frequency Dependence Decouples Fitness in a Selection Hierarchy 5 Selection as Covariance 5 Evolution in Hierarchically Structured Populations 6 Evolution of Genetic Constraints 7 Population Dynamics and Natural Selection 7 Fitness Minima 7 Prisoner's Dilemma 7 Spatial Structure and the Evolution of Cooperation 7 The Problem of Frequency Dependence 8 CHAPTER 5 8 Multilevel Selection of the Organisms 8 A Scenario 8 A Model for the Emergence of Organisms 8 Keurrence Equations 8 Within	Kin Selection in Evolutionary Transitions	40

A Scenario8A Model for the Emergence of Organisms8Recurrence Equations8Within-Organism Mutation Selection Model8	WINNEVEL SELECTION OF THE OTGAINSIN	01
Recurrence Equations 8 Within-Organism Mutation Selection Model 8	A Scenario	81
Within-Organism Mutation Selection Model	A Model for the Emergence of Organisms	81
0	Recurrence Equations	84
		86
Mutation Rate 8	Mutation Rate	87
Covariance Methods 8	Covariance Methods	89
The Risk of Development 9	The Risk of Development	90

Increase of Cooperation	91
Level of Cooperation among Cells within Organisms	93
Fitness of Organisms	95
Effect of Sex and Diploidy on the Emerging Organism	101
Strengths and Weaknesses of the Model	102
Chapter 6	
Rediscovering Individuality	107
Evolutionary Individuals	107
Two-Locus Modifier Model	109
Model Parameters	112
Equilibria of the System	112
Evolution of the Germ Line	113
Evolution of the Mutation Rate	118
Evolution of Self-Policing	119
Evolution of Adult Size	121
Effect of Transition on the Level of Cooperation	122
Increase of Fitness Covariance at Organism Level	122
Heritability of Fitness and the Evolution of Individuality	124
Sex and Individuality	127
Origin of Multicellular Life	129
Transitions in Individuality	131
Chapter 7	
Fitness Explanations	133
Overview of Fitness and Natural Selection	133
Trading Fitness through Cooperation	135
Kinship and Population Structure	136
Conflict Mediation	137
Reconsidering Fitness	137
The "Tautology Problem"	140
Surrogates for Natural Selection	142
Evolution of Selfing	145
Cost of Sex	146
Immortality, Death, and the Life Cycle	150
Kin Selection of Altruism	152
Heterozygote Superiority	154
Sickle Cell Anemia	156
Darwin's Dilemmas	158

CONTENTS

Chapter 8		
A Philosophy of Fitness	Level of Cooperation impr	51
Dynamics of Design	Finess of Organisms 7	61
What Makes Biology Different?	Effect of Sex and Diploidy (63
Success and Design	Firengths and Weaknesses o	64
Long-Term versus Short-Term Measures of Fi	itness 10	66
Darwinian Dynamics		67
Natural Selection as a Biological Law	Pascovenag, Individuality	69
Paradigms for Natural Selection		73
Fitness in Darwinian Dynamics		74
The Insufficiency of Individual Fitness	Idodel Parameters	75
Heritability and Natural Selection		79
Schema for Natural Selection		81
The Propensity Interpretation of Fitness		83
Brandon's Approach		86
Heritable Capacities as Components of Desi	0	89
Overall Adaptedness of Organisms		91
musking of muphreness		94
Are Adaptation Concepts Necessary?		96
F-Fitness and Evolutionary Explanations		97
Explaining Fitness		200
APPENDIX A	Francisions in Individuality	
Supporting Analyses	2	203
A A A A A A A A A A A A A A A A A A A	2	203
Statistics of Fitness and Selection Equilibria for Modifier Model ($G = 0$)		217
Cost of Sex in Diploids		218
Appendix B		
Fitness Phrases		222
Appendix C
