COMMITTEES OF HSM 2019

4

KEYNOTE PAPERS

001	Hybrid manufacturing – The best of both worlds Prof. Weigold	10
002	Composite structural parts for high speed machine tools Dr. Uher	11
003	Predictive modelling of machining processes Prof. Arrazola	12
004	Exploring the limits of chatter-free high speed milling operations Prof. Stépán	13

Session on micromachining and drilling processes

094	Surface integrity in turning of Fe17Cr2Ni0.2C iron based thermally sprayed coatings with special respect to the influence of the feed	14
045	Affectation of chip formation in single-lip deep hole drilling at small diameters by application of low-frequency vibration support	15
050	Investigations on material removal mechanism in drilling 2D C _r /SiC composites using PCD tools	16
063	In process monitoring and analysis of whirling motions in boring and trepanning association (BTA) deep drilling	17
076	Analysis of contour accuracy and process forces using a chamber-boring-system	18

Session on tool path planning and feed drive control

012	Design and simulation-based analysis of a test bed for two-dimensional kinematically coupled force compensation	19
028	A novel evaluation method for setpoint data based on time-frequency analysis	20
082	Productivity increase of high precision micro-milling by trajectory optimization	21
095	Control of hybrid electric-hydraulic drive for vertical feed axis of machine tools	22
102	S-curve algorithm of acceleration/deceleration with smoothly-limited jerk in high speed equipment control tasks	23
109	Modal-space control of a linear motor-driven gantry system	24
119	Machining of thin blade using vibration prediction and continuous spindle speed control	25
131	Adaptive toolpath for 3-axis milling of thin walled parts	26

Session on machining of difficult-to-cut materials

017	Surface hardening and wear correlations studies when turning Inconel 718	27
040	A preliminary investigation on ice-assisted milling of zirconium-based bulk metallic glass	28
041	An investigation on the feasibility of dry high speed machining of additive manufactured Ti-6Al-4V alloy with solid ceramic end mill	29
042	Pulsating high-pressure cutting fluid supply for chip control in finish turning of Inconel 718	30

046	Influence of both rake and flank faces metal working fluid (MWF) strategies on machinability of Ti-6Al-4V alloy	31
055	Experimental investigations on residual stress in hard turning of AISI 52100 using PCBN and coated carbide tools	32
087	Investigations on the influence of isotropy improving alloy additives when machining 38MnSiVS6	33
092	Methodology for a model-based control of the boundary zone properties during milling of Ti-6Al-4V	34
101	Finish milling study of Ti-6Al-4V produced by Laser Metal Deposition	35
110	Nickel-based alloy dry milling force and temperature by using monolithic ceramic end mill tool	36
115	Cutting condition selection for high-speed milling of titanium alloy	37
122	Machining induced hardening aspects in eco-friendly HSM of Inconel 718	38
127	Analysis of surface post-processing techniques for improvement of additive manufactured parts in aerospace	39
128	Modelling and optimization of the cutting forces during Ti-6Al-4V milling process using the response surface methodology and dynamometer	40
129	Surface roughness investigations in minimum quantity lubrication assisted high speed turning of two aerospace materials	41

Session on tool wear and cryogenic machining

018	Effect of temperature and oxidation in cutting zone on wear of cutting tools with multilayer composite nano-structured coatings at high speed turning	42
054	Tribological performance of textured robust lyophobic tool surface	43
019	Clean manufacturing of Ti-6Al-4V under cryogenic CO ₂ and hybrid nanofluids	44
021	Investigation on the productivity of milling Ti-6Al-4V with cryogenic minimum quantity lubrication	45
027	The influence of cutting conditions on surface integrity in high feed milling of Ti-6Al-4V with supercritical CO ₂ cooling	46

Session on machine tool design, characterization and accuracy

064	The impact of size reduction on the energy efficiency, dynamics and machining performances in milling	47
066	Mobile machines for the machining of large dimension parts	48
111	Resource consumption classes of machine tools	49
074	Strategy of milling center thermal error compensation using a transfer function model and its validation outside of calibration range	50
077	Long-term thermal compensation of 5-axis machine tools due to thermal adaptive learning control	51

015	A study of the application of volumetric compensation by direct and indirect measurement methods	52
039	A study on the dynamic behaviour of machine tool spindle-tool-holder by using joint stiffness	53
083	Modeling and simulation technology of the spindle characteristics for manufacturing industry	54
116	High speed synchronous reluctance drives for motor spindles	55

Session on dynamic behaviour and process-machine interaction

013	Chatter avoidance in milling by using advanced cutting tools with structured functional sufaces	56
020	Investigation of process damping in robotic milling	57
030	Investigation of the dynamic behavior of machine tools during cutting by operational modal analysis	58
032	Vibration attenuation of boring bars with nonlinear control force	59
044	Frequency response prediction for robot assisted machining	60
084	Improving cutting performance of two spindle machine tool applying tuned mass damper	61
099	Operational method for identification of specific cutting force during milling	62
124	Machinability the AISI 316 stainless steel after processing by various methods of 3D printing	63
125	Stability analysis for peripheral milling of hardened mold steel considering helix angle effect	64

Session on fundamentals of cutting process

014	A generalized force and chip flow model for oblique cutting and varying undeformed chip crosssections	65
037	A two-step discrete element method by elastic-viscoplastic constitutive model in high speed cutting	66
080	Inverse material model parameter identification for metal cutting simulations by optimization strategies	67
098	Numerical and experimental analysis of chip formation at ultrahigh cutting speed	68

Session on smart devices and digital twins

023	Adaptive scheduling through machine learning-based process parameter prediction	69
026	Quality control of a milling process using process data management in the aerospace industry	70
035	Concept of smart tool holder monitor for tool management	71

048	A new power-based online tool state monitoring method in cyber-physical system	72
057	High-resolution geometry measurement with a collaborative robot	73
070	Development of a method to determine cutting forces based on planning and process data as contribution for the creation of digital process twins	74
091	Feed drive condition monitoring using modal parameters	75
093	Simulation-based fast identification method of cutting process	76
103	Investigation of processes in high speed equipment using CNC capabilities	77
112	Estimation of engagement conditions using an ANN pattern recognition system on the base of a sensory tool holder	78

Session on machining of non-ferrous materials and micromachining

047	Numerical study on stress wave induced dislocation density evolution during high speed machining	79
065	Surface roughness and its prediction in high speed milling of aluminum alloys with PCD and cemented carbide tools	80
022	Material removal mode in 3D micro USM	81
130	Design of a micro tool for high-efficiency micro slotting	82
108	High speed machining of brass rod alloys	83

Session on abrasive processes

038	Free-form tools design and fabrication for Flank Super Abrasive Machining (FSAM) non developable surfaces	84
061	Spherical fixed abrasive head lapping of titanium alloy plane	85
089	Sensors as an enabler for self-optimizing grinding machines	86
090	Molecular dynamics investigation of the efficiency of vibration-assisted nano-grinding	87
097	A novel method for the characterization of diamond wire topography and abrasive grain geometries	88
107	Investigation of the coolant fluid flow distribution in the grinding gap	89
121	Experimental investigation on tool path patterns in controlled depth abrasive water jet machining	90
123	Active abrasive number in fixed abrasive lapping process	91
