Preface XXIII

Introduction XXIX

Part One Structure and Bonding

1	Bonding in Coordination Compounds	3
1.1	d Wavefunctions	3
1.2	Crystal Field Effect on Wavefunctions	3
1.2.1	Qualitative Aspects	3
1.2.2	Quantitative Aspects	7
1.2.2.1	Energy Operator of the Ligand Field	7
1.2.2.2	Effect of V_{oct} on d Functions	7
1.2.2.3	Crystal Field Splitting Parameter	8
1.2.2.4	Weak and Strong Fields. Crystal Field Stabilization Energy	8
1.2.2.5	Splitting of d Orbitals in a Tetrahedral Field	10
1.2.2.6	Splitting of d Orbitals in a Tetragonally-distorted Octahedral Field.	
	Square-planar Complexes	10
1.3	Molecular Orbital Theory	11
1.3.1	Molecular Orbitals of an Octahedral Complex	12
1.3.1.1	σ Molecular Orbitals	12
1.3.1.2	π Molecular Orbitals	14
1.3.2	Molecular Orbitals of a Tetrahedral Complex	17
1.3.3	Molecular Orbitals of a Square-planar Complex	18
1.3.4	Mixed Ligands and Other Geometries	20
1.3.5	Nobel Prizewinning Discoveries of Complexes	21
1.3.5.1	Metallocenes	21
1.3.5.2	Carbenes	22
1.4	Angular Overlap Model	24
1.4.1	Overlap Integral	24
1.4.2	Energy of the Molecular Orbitals	24
1.4.3	The Additive Character Rule	25
1.4.4	Tables for Calculating the Angular Overlap Parameters	25

1.4.5	Examples of Use of the Above Tables	27
	References	29

2 Classification of Ligands and Design of Coordination 31

2.1	Introduction	31
2.2	Classification of Ligands According to Their Dentate Nature	32
2.2.1	Monodentate Ligands	32
2.2.2	Polydentate (Non-encapsulating) Ligands	32
2.2.2.1	Non-polypodal Open-chain Ligands	33
2.2.2.2	Polypodal Open-chain Ligands	35
2.2.2.3	Closed Polydentate Ligands: Macrocycles	36
2.2.3	Cryptands and Encapsulating Ligands	41
2.2.3.1	Cryptands with Ether-type Oxygen Atoms	43
2.2.3.2	Cryptands with Nitrogen Atoms (Azacryptands)	43
2.2.3.3	Cascade Effect	44
2.2.3.4	Other Cage-like Complexes	44
2.2.3.5	Molecular Capsules	46
2.3	Versatile Ligands	47
2.3.1	Scorpionates	47
2.3.1.1	Boron-Derivatives: 'Typical' Scorpionates	48
2.3.1.2	Carbon-Derivatives	48
2.3.2	Calixarenes	48
2.3.2.1	Functionalization and Complexation	50
2.3.2.2	Deprotonated Calix[n]arene, Calixanions	51
2.3.3	Fullerenes	52
2.3.3.1	Exohedral Metallofullerenes	52
2.3.3.2	Endohedral Metallofullerenes	53
	References	54
	Bibliography	57

3 Stereochemistry and Distortions in Coordination Compounds 59

3.1	Stereochemistry	59
3.1.1	Ligand-Ligand Repulsion: Kepert's Model	59
3.1.2	Coordination Numbers: Various Factors	59
3.1.3	Coordination Number 2	60
3.1.4	Coordination Number 3	61
3.1.4.1	Stereochemistry	61
3.1.5	Coordination Number 4	62
3.1.5.1	Energy of the MOs (Angular Overlap Model)	63
3.1.5.2	Tetrahedral Complexes	64
3.1.5.3	Square-planar Complexes	64
3.1.5.4	cis-Divacant Octahedron	64
3.1.5.5	Polydentate Ligands: Steric Effects	64
3.1.5.6	$D_{4h} \leftrightarrow O_h$ Equilibrium	65
3.1.6	Coordination Number 5	65

3.1.6.1	Electronic Aspects	66
3.1.6.2	[ML ₅] Complexes	67
3.1.6.3	[M(bidentate) ₂ L] Complexes	67
3.1.6.4	[M(tridentate)L ₂] Complexes	68
3.1.6.5	[M(tetradentate)L] Complexes	68
3.1.6.6	Bond Lengths in tbp and sp Geometry	69
3.1.7	Coordination Number 6	70
3.1.7.1	O _h with Bidentate Ligands	71
3.1.7.2	Trigonal-prismatic Geometry	71
3.1.8	Coordination Number 7	74
3.1.8.1	Hepta(monodentate) Complexes	75
3.1.8.2	Complexes with Polydentate Ligands	75
3.1.9	Coordination Number 8	75
3.1.9.1	Complexes with Monodentate Ligands	75
3.1.9.2	Relationship Between Structures with Eight-coordination	77
3.1.9.3	Complexes with Bidentate-chelated Ligands	77
3.1.9.4	Complexes with Polydentate Ligands	77
3.1.10	Coordination Number 9	78
3.1.11	Coordination Numbers 10, 11 and 12	79
3.1.12	More Than One Coordination Type in the Same Crystal	80
3.2	Distortions in Coordination Compounds Due to Electronic Factors:	
	Jahn–Teller Effect	81
3.2.1	Introduction	81
3.2.2	First-order Jahn–Teller Effect	81
3.2.2.1	Distortions of Octahedral Geometry	82
3.2.2.2	Distortions in Tetrahedral Geometry	84
3.2.2.3	Jahn–Teller effect in Other Non-O _h (T _d) Geometries	84
3.2.2.4	Dynamic Jahn–Teller Effect and Crystal Stereochemistry	84
3.2.3	Second-order Jahn–Teller Effect or Pseudo-Jahn–Teller Effect (PJTE)	85
3.2.3.1	Concept and Conditions	85
3.2.3.2	Examples	86
	References	90
4	Isomerism in Coordination Compounds	95
4.1	Introduction	95
4.2	Constitutional or Structural Isomers	95
4.2.1	Ionization Isomerism	95
4.2.2	Hydrate (Solvate) Isomerism	96
4.2.3	Coordination Isomerism	96
4.2.4	Linkage Isomerism	97
4.2.5	Polymerization Isomerism	98
4.2.6	Ligand Isomerism	98
4.2.6.1	With Different Connectivity	98
4.2.6.2	Ligand Conformational Isomerism (Atropisomer Ligands)	99
4.3	Stereoisomers	99

4.3.1	Atropisomers: Conformational Isomers	100
4.3.2	Geometrical Isomers: Diastereoisomers	101
4.3.3	Enantiomers	102
4.4	Chirality in Coordination Compounds: Nomenclature of Chirality	103
4.4.1	R, S Symbols (CIP System)	103
4.4.2	Skew-line Convention	105
4.5	Chirality in Coordination Compounds: Origin and Examples in Mononuclear Complexes	107
4.5.1	Different Nature of the Ligands	107
4.5.2	Distortion from Achiral to Chiral Geometries	107
4.5.3	Spatial Arrangement of the Achiral Chelated Rings	108
4.5.4	The Coordination of Chiral Ligands	109
4.5.4.1	The Coordination of Ligands With a Stereogenic Center	109
4.5.4.2	The Coordination of Ligands Without a Stereogenic Center	110
4.5.5	The Coordination of Pro-chiral Ligands	110
4.5.6	The Presence of Two Coordinated Ligands That Mutually Break Improper Rotation Elements Present in Each Ligand Individually	111
4.5.7	Planar Chirality	111
4.6	Chirality in Polynuclear Coordination Compounds: Examples	111
4.6.1	Chiral Polynuclear Complexes	112
4.6.2	Chiral Polygons and Polyhedra	112
4.7	Separation of Chiral Isomers	113
4.7.1	Resolution of Racemic Complexes (Stereospecific Synthesis)	113
4.7.1.1	Resolution by Solubility Differences of Solids	114
4.7.1.2	Resolution by Chromatography	114
4.7.1.3	Resolution by Asymmetric Extraction	115
4.7.2	Enantioselective Synthesis	115
4.7.2.1	Spontaneous Selectivity or Total Spontaneous Resolution	115
4.7.2.2	Predetermined Chirality	115
4.7.3	Dynamic Helicity Inversion	117
4.8	From Chirality (Coordination Compounds) to Chirality (Application to the Enantioselective Synthesis of Organic Molecules)	118
4.8.1	Overview of Chiral Ligands	118
4.8.2	Overview of Main Catalytic Processes	118
4.8.2.1	Asymmetric Hydrogenation	118
4.8.2.2	Asymmetric Hydroformylation	120
4.8.2.3	Asymmetric Epoxidation (and Similar Reactions)	121
4.8.2.4	Other Important Asymmetric Reactions	122
4.8.2.5	Heterogenized Asymmetric Catalysts	122
4.9	Valence Tautomerism	122
4.9.1	Conditions and Types	123
4.9.2	Photo-induced Valence Tautomerism	124
	References	124

5	Polynucleating Ligands: From Di- and Polynuclear Complexes to Nanomolecules	129
5.1	Introduction	129
5.2	Polynucleating Ligands	129
5.2.1	Monoatomic Bridging Ligands	130
5.2.2	Polyatomic Bridging Ligands	130
5.2.2.1	Diatomic Ligands	130
5.2.2.2	Small Versatile Ligands	130
5.2.3	Polytopic Ligands	131
5.2.4	Compartmental Bridging Ligands	131
5.2.4.1	Polyketones	132
5.2.4.2	Schiff Base Derivatives	132
5.3	Building Block Strategy or Controlled Synthesis: Complexes as Metals/Complexes as Ligands (Complexes as Tectons)	133
5.3.1	The "Complexes as Metals" Approach	134
5.3.2	The "Complexes as Ligands" Approach	134
5.3.3	The "Complexes as Ligands and Complexes as Metals" Approach	134
5.4	High Nuclearity Clusters: Generalities	135
5.5	Oxido-hydroxido High-nuclearity Clusters (Excluding Polyoxometalates)	135
5.5.1	Non-protected Compounds	135
5.5.2	Protected Compounds	136
5.5.2.1	Alkoxido Derivatives	136
5.5.2.2	Assembly of Metal-oxido(alkoxido)-bridged Clusters with Blocking Ligands	137
5.6	Polyoxometalates (POMs)	138
5.6.1	Nanosized Polyoxometalates (NS-POMs)	139
5.6.2	Selected Examples of POMs and NS-POMs	139
5.6.2.1	Vanadates	139
5.6.2.2	Nano-sized Vanadates	140
5.6.2.3	Molybdates and Tungstates	140
5.6.2.4	Nano-sized Molybdates	141
5.6.2.5	Nano-sized Tungstates	143
5.6.3	Polyoxometalate-supported Transition Metal Complexes	143
5.6.3.1	From Not-lacunary Polyoxometalates	143
5.6.3.2	From Lacunary Polyoxometalates	144
5.7	Oxido-carboxylate Clusters (Especially Those Derived from $[M_3O(\text{carboxylate})_6]$ Units)	145
5.7.1	Iron	146
5.7.2	Manganese	146
5.8	Metal Wheels	148
5.8.1	Ferric Wheels	148
5.8.2	Wheels of Other Metals	148
5.9	Other Significant Organic Polynucleating Ligands	149
5.9.1	Di-2-pyridylketones	150

5.9.2	2-Pyridonates	151
5.10	Metallodendrimers	152
5.10.1	Classification	154
5.10.2	Properties	156
5.11	Future Outlook	157
	References	158
6	Metal–Metal Bond and Metal Clusters	163
6.1	Introduction: Definition and Main Characteristics	163
6.2	Transition Metal Clusters	163
6.3	Transition Metal Clusters with π -Donor Ligands	164
6.3.1	Dinuclear Clusters	164
6.3.1.1	Dinuclear Clusters Based on ML_4 or ML_5 Fragments	164
6.3.1.2	Dinuclear Clusters Based on Face-sharing Bioctahedra	166
6.3.1.3	L_3MML_3 Unbridged Dinuclear Clusters	166
6.3.1.4	A New and Unique Case: a Fivefold Cr–Cr Bonding	167
6.3.2	Trinuclear Clusters	167
6.3.3	Tetranuclear Clusters	168
6.3.4	Hexanuclear Clusters	168
6.3.5	Centered Clusters	169
6.3.6	Structures Containing More Than One Metal–Metal Bonded Unit	169
6.3.7	Extended Metal Atom Chains (EMACs)	170
6.4	Clusters with π -Acid Ligands: Structure and Bonding	170
6.4.1	Localized Bonding Treatments: 18 Valence Electron (VE) Rule	171
6.4.2	Isolobal Analogies	172
6.4.2.1	Extensions of the Analogy	174
6.4.2.2	Examples of Isolobal Analogies Derived from Octahedral Fragments	175
6.4.2.3	Isolobal Analogies from Non-octahedral Geometry	175
6.4.3	Delocalized Bonding Treatments: Structure and Bonding in Clusters of ‘Medium’ Nuclearity	176
6.4.3.1	Delocalization and Deltahedra: Polyhedral Skeletal Electron Pair Theory (PSEPT or SEP)	176
6.4.3.2	Summary	179
6.4.3.3	The Capping Principle	180
6.4.3.4	The Principle of Polyhedral Fusion (Condensed Polyhedra)	181
6.4.4	Structure and Bonding in High Nuclearity Clusters	181
6.5	Main Group Metal Clusters	183
6.5.1	Alkali and Alkaline earth Metal Clusters	183
6.5.2	Metal Clusters of Groups 13, 14 and 15	184
6.5.2.1	Examples	185
6.5.2.2	Metallated Zintl Clusters	187
6.6	Clusters with Interstitial Atoms	188
6.6.1	‘Non-metallic’ Atoms in d-Block Clusters	188

6.6.2	d-Metal Atoms in p-Block Clusters	189
6.6.3	Special Cases	190
6.7	Gold Clusters and Nanoparticles	190
6.7.1	Naked Clusters	191
6.7.2	Functionalized Clusters	191
6.7.3	Doping Golden Clusters	192
6.7.4	Non-gold Clusters	193
6.7.4.1	Clusters and Hydrogen Storage	193
	References	194
7	Thermodynamic and Non-redox Kinetic Factors in Coordination Compounds	199
7.1	Thermodynamic Stability	200
7.1.1	Steps Equilibria	200
7.1.1.1	Variation of K_i	201
7.1.2	Factors that Affect the Stability of Complexes	203
7.1.3	Stability Trends for Metal–Ligand Interactions	203
7.1.3.1	The Irving–Williams Series	203
7.1.3.2	Classification of Central Atoms and Ligands	204
7.1.3.3	The Concept of Hard and Soft Acids and Bases	205
7.1.3.4	Stability Due to the Multidentate Character of Ligands	208
7.1.4	Steric Factors: Cone Angle	215
7.2	Non-redox Reaction Mechanisms	217
7.2.1	Introduction	217
7.2.2	Summary of Formal Kinetics	217
7.2.2.1	The Rate Law	217
7.2.2.2	Integrated Rate Laws of Simple Reactions	218
7.2.2.3	Activation Parameters and Reaction Mechanism	219
7.2.2.4	Reaction Profiles: Potential Energy Curves	219
7.2.3	Generalities on Ligand Substitution Reactions	220
7.2.3.1	Classification of Substitution Mechanisms and their Experimental Differentiation	220
7.2.4	Substitutions on Square Planar Complexes	221
7.2.4.1	Rate Law	222
7.2.4.2	Mechanisms of Nucleophilic Substitution	222
7.2.4.3	Proofs of the Associative Mechanism	224
7.2.4.4	The <i>trans</i> -Effect	225
7.2.5	Substitution Mechanisms in O_h Complexes	228
7.2.5.1	Introduction	228
7.2.5.2	Kinetics: Rate Laws	228
7.2.5.3	Mechanisms	229
7.2.5.4	Factors That Affect the Rate of O_h Complexes	230
	References	233
	Bibliography	233

Part Two Electronic Properties

- 8 Crystal Field Theory and Spin–Orbit Coupling: Energy Terms and Multiplets 237**
- 8.1 Introduction: The Atomic/Electronic Hamiltonian 237
- 8.2 Application of Atomic and Spin Hamiltonians to Many-electron Wavefunctions: Terms, Multiplets and Magnetic States 238
- 8.2.1 Basic Concepts 238
- 8.2.2 Direct Product Method for Calculating Terms 240
- 8.2.3 Different Cases for the Direct Product Calculation 241
- 8.3 Weak Field Method 242
- 8.3.1 Atomic (Spectroscopic) Terms 243
- 8.3.2 Energy of the Atomic Terms 244
- 8.3.3 Crystal Field Effect 245
- 8.3.4 Observation Regarding the Ground Term 245
- 8.3.5 Energy Values of the Crystal Field Terms 247
- 8.3.5.1 Effect of the Crystal Field on the Spectroscopic Terms 247
- 8.3.5.2 Excited Terms with Same Spin Multiplicity as Ground Term: Configuration Interaction 249
- 8.3.5.3 Orgel Diagrams 250
- 8.4 Strong Field Method 252
- 8.4.1 Considerations Regarding the Ground Term 253
- 8.4.2 Term Energies 254
- 8.5 Correlations Between the Energy Terms Derived from the Weak and Strong Fields: Intermediate Fields 254
- 8.6 Tanabe–Sugano Diagrams 257
- 8.7 Ligand Field 259
- 8.8 Spin–Orbit Coupling 261
- 8.8.1 Spin–Orbit Coupling in Atomic (Spectroscopic) Terms 261
- 8.8.2 Spin–orbit Coupling in Coordination Compounds 263
- 8.8.3 First-order Spin–Orbit Coupling 263
- 8.8.3.1 Cubic Symmetry, O_h or T_d 263
- 8.8.3.2 General Case: Non-cubic Symmetry 264
- 8.8.3.3 Splitting of the Terms 264
- 8.8.3.4 Energy of the Terms in O_h Symmetry 265
- 8.8.4 Second-order Spin–Orbit Coupling 265
- 8.8.4.1 The Zero Field Splitting (ZFS) 267
- 8.8.4.2 The g Parameter Variations 269
- 8.9 Final Considerations on Spin–Orbit Coupling and Zero Field Splitting 270
- References 272
- 9 Electronic Spectroscopy 273**
- 9.1 Introduction 273
- 9.2 Electromagnetic Radiation 273

9.3	Fundamentals of Spectroscopy: Selection Rules	275
9.3.1	Basic Spectroscopic Principles	275
9.3.2	Transition Moment	276
9.3.3	Selection Rules	277
9.4	Interpretation of the Selection Rules	278
9.4.1	Mixture of d and p Orbitals of the Same Symmetry Species	278
9.4.2	Vibronic Coupling	279
9.4.3	Spin–Orbit Coupling	280
9.5	Types of Spectra for Transition Metal Complexes	281
9.5.1	d $\rightarrow$ d Spectra	281
9.5.1.1	Number of Bands that Appear and Their Assignment	281
9.5.1.2	Intensity of the Bands	282
9.5.1.3	Study of the Bandwidth	282
9.5.1.4	Band Splitting or Asymmetry	283
9.5.1.5	Band Polarisation: Dichroism	284
9.5.2	Charge-transfer Spectra	286
9.5.2.1	Definition and Types	286
9.5.2.2	Intensity and Allowed Nature of CT Transitions	287
9.5.2.3	Band Energy: Relationship to Redox Potentials	289
9.5.2.4	M $\rightarrow$ L or L $\rightarrow$ M Transitions?	291
9.5.3	Intervallence Charge-transfer Bands	291
9.6	Calculating the Crystal Field Parameters from the Position of the d–d Bands	292
9.6.1	Numerical Method for d ² , d ³ , d ⁷ (Weak Field) and d ⁸ Ions	292
9.6.2	Graphical Methods for Any d ⁿ Configuration	293

Part Four New Trends in Modern Coordination Chemistry

14	Supramolecular Chemistry, Metallosupramolecular Chemistry and Molecular Architecture	439
14.1	Supramolecular Chemistry: Definitions	439
14.1.1	Lehn's Idea	439
14.1.2	Intermolecular Bonds	440
14.1.3	Concepts and Perspectives	441
14.1.3.1	Host–Guest Chemistry	441
14.1.3.2	Self-assembly Processes	441
14.1.3.3	Perspectives	441
14.1.3.4	The “Philosophy” of This Chapter	441
14.2	Molecular Recognition	442
14.2.1	Molecular Receptors (Hosts)	442
14.2.1.1	Cation-binding Hosts	442
14.2.1.2	Selectivity of Cation Complexation	446
14.2.1.3	Anionic Recognition	447
14.2.1.4	From Anionic Recognition to Cationic Recognition: A Simple Change in pH	448
14.2.1.5	Neutral Molecules Recognition: Binding of Neutral Molecules	448
14.2.1.6	Molecular Coreceptors and Multiple Recognition	450
14.3	Supramolecular Dynamics: Reactivity, Catalysis and Transport Processes	451
14.4	The Self-assembly Concept and Its Application in Molecular and Supramolecular Chemistry	451
14.5	Metallosupramolecular Chemistry: Different Strategies and Types	452
14.5.1	Helicates	453
14.5.1.1	Cyclic Helicates	455
14.5.1.2	Self-recognition in Helicates	456

14.5.2	Grid-type Metal Ion Architectures	457
14.5.3	Ladder and Racks Architectures	458
14.5.4	Discrete Nanostructures Mediated by Transition Metals. Molecular Paneling via Coordination	458
14.5.4.1	Polygons (or Metallocycles)	459
14.5.4.2	Polyhedra: Molecular Paneling	460
14.5.4.3	Cationic and Anionic Control	463
14.6	Encapsulated Guests in Metallo-nanostructures	463
14.7	Supramolecular Assistance in the Synthesis of Molecular (and Supramolecular) Structures	463
14.7.1	Rotaxanes, Catenanes and Knots	464
14.7.1.1	Catenanes, Catenates	464
14.7.1.2	Rotaxanes	466
14.7.1.3	Knots	466
14.7.1.4	Necklaces	467
14.8	(Supra)molecular Devices and Machines	468
14.8.1	Some Different Motions	469
	References	472
15	Photochemistry and Photophysics in Coordination Compounds	477
15.1	Fundamentals	477
15.1.1	Introduction	477
15.1.2	Electronic Spectra and Photochemistry	477
15.1.3	Photochemical Principles for Absorption and Emission	478
15.1.3.1	Introduction	478
15.1.3.2	The Excited State	479
15.1.3.3	Transitions Between Energy States. Decay Processes	480
15.1.3.4	Quantum Yield	483
15.1.3.5	Main Principles: Kasha's Rule and Stokes Shift	483
15.1.4	Identification of the Excited State	484
15.2	Examples of Main Photochemical Processes	485
15.2.1	Non-redox Processes	485
15.2.1.1	Photoisomerization	485
15.2.1.2	Photodissociation	486
15.2.1.3	Photosubstitution	487
15.2.2	Photo-redox Processes	487
15.2.2.1	General Aspects	487
15.2.2.2	Mechanism of the Redox Processes	488
15.2.2.3	Variation in Redox Potentials	488
15.2.3	Generalities of Some Photochemically Active Series of Compounds	489
15.2.3.1	[Ru(bpy) ₃] ²⁺ and Related Complexes	489
15.2.3.2	Porphyrins and Related Complexes	491
15.2.3.3	Photophysics of Lanthanides	491
15.3	Photo-molecular Devices and Machines	493

15.3.1	Switching Electron-transfer and Energy-transfer Processes	494
15.3.1.1	Bistable Systems	494
15.3.1.2	Multiple Chemical Inputs	495
15.3.2	Light-harvesting Antennae	497
15.3.2.1	Metallo-porphyrin Systems	499
15.3.2.2	Dendrimers	500
15.3.2.3	Lanthanide Systems	501
15.3.3	Photoinduced Charge Separation (Solar Energy Conversion)	502
15.3.3.1	Photoinduced Energy Transfer Coupled to Charge Separation	502
15.3.3.2	Model of Photosynthesis	504
15.4	Applications (Present and Future)	505
15.4.1	Modulation of Switches: Analytical Probes and Sensors	505
15.4.1.1	Fluorescent (or Luminescent) Chemosensors	505
15.4.2	Photomolecular-scale Machines	508
