

Contents

Preface.....	xv
Acknowledgments.....	xvii
About the Author	xix
Chapter 1 Introduction	1
1.1 The Never-Ending Journey to Discovering the Secrets of Nature	1
1.1.1 The “Practical Period”	4
1.1.2 The “Philosophical Period”	5
1.1.3 The “Experimental Period”	8
1.1.4 The “Computational Period”	15
1.2 What Is Science, Today?.....	16
1.3 Purpose and Contents of This Book.....	18
1.4 Key Questions.....	20
1.5 Key Words	20
1.6 Hints for Further Reading	20
Chapter 2 Reversibility or Irreversibility? That Is the Question!	21
2.1 Introduction	21
2.2 The Thermodynamic Approach	22
2.2.1 The Classical Definition of Entropy.....	23
2.2.2 The Statistical Definition of Entropy	24
2.2.3 The Logical Definition of Entropy	27
2.3 An Exhausting Fight against Entropy	30
2.3.1 The Maxwell’s Demon	30
2.3.2 A First Mechanical Attempt.....	30
2.3.3 Another Mechanical Attempt.....	31
2.3.4 The Involvement of Artificial Intelligence: A “Thought Experiment”	32
2.3.5 The Embodiment of Maxwell’s Demon: A “Real Experiment”	34
2.3.6 The Surprising Behavior of Small Systems	35
2.3.7 There Is Still an Open Question.....	38
2.4 Key Questions.....	38
2.5 Key Words	38
2.6 Hints for Further Reading	39
2.7 Exercises.....	39
2.8 Solutions to the Exercises.....	39
Chapter 3 Out-of-Equilibrium Thermodynamics	41
3.1 Introduction	41
3.2 Definition of the Entropy Change for an Out-of-Equilibrium System	41
3.2.1 Heat Conduction.....	43
3.2.2 Chemical Reactions.....	44
3.2.3 Diffusion.....	47
3.2.4 Migration.....	47
3.2.5 Generalization	50

3.3	Non-equilibrium Thermodynamics in Linear Regime	50
3.3.1	Fourier's Law: The Law of Heat Conduction	50
3.3.2	Ohm's Law: The Law of Electrical Conduction	51
3.3.3	Poiseuille's Law: The Law of Laminar Flow of Fluids	52
3.3.4	Fick's Law: The Law of Diffusion	53
3.3.5	Generalization: Symmetry Principle and Onsager Reciprocal Relations.....	54
3.3.6	An Experimental Proof of the Reciprocal Relations	57
3.3.7	Cross-Diffusion.....	59
3.3.8	Thermal Diffusion	61
3.4	Evolution of Out-of-Equilibrium Systems in Linear Regime	63
3.4.1	The Case of Heat Conduction	64
3.4.2	The Case of Diffusion.....	65
3.5	The Theorem of Minimum Entropy Production in Linear Regime.....	67
3.5.1	A Single Force and Flow	67
3.5.2	The Case of More Than One Force and One Flow.....	68
3.6	Evolution of Out-of-Equilibrium Systems in Nonlinear Regime	69
3.6.1	Chemical Reactions	69
3.6.2	The Glansdorff-Prigogine Stability Criterion.....	71
3.7	The Chemical Transformations and the Linear Regime	72
3.7.1	Onsager's Reciprocal Relations for Chemical Reactions.....	73
3.7.2	A Particular Case	73
3.8	The Evolution of Chemical Reactions in Open Systems.....	74
3.8.1	The Mono-Dimensional Case	75
3.8.2	The Bi-Dimensional Case	76
3.8.3	The Multi-Dimensional Case.....	81
3.9	Key Questions	81
3.10	Key Words	82
3.11	Hints for Further Reading	82
3.12	Exercises.....	82
3.13	Solutions to the Exercises.....	86

Chapter 4	An Amazing Scientific Voyage: From Equilibrium up to Self-Organization through Bifurcations	97
4.1	Introduction	97
4.2	Bifurcations	101
4.2.1	Saddle-Node Bifurcation	101
4.2.2	Trans-Critical Bifurcation.....	102
4.2.2.1	From a Lamp to a Laser: An Example of Trans-Critical Bifurcation	103
4.2.3	Pitchfork Bifurcation	105
4.2.3.1	Chiral Symmetry Breaking.....	105
4.2.4	Hopf Bifurcations.....	110
4.3	Key Questions	111
4.4	Key Words	111
4.5	Hint for Further Reading.....	111
4.6	Exercises.....	112
4.7	Solutions to the Exercises.....	112

Chapter 5	The Emergence of Temporal Order in the Ecosystems.....	117
5.1	Introduction	117
5.2	Predator-Prey Relationship: The Lotka-Volterra Model	117
5.3	Entropy Production in the Lotka-Volterra Model	121
5.4	More about Predator-Prey Relationships.....	123
5.5	Other Relationships within an Ecosystem.....	129
5.6	Mathematical Modeling of Symbiotic Relationships	130
5.6.1	Antagonism.....	130
5.6.2	Mutualism	133
5.7	Key Questions	135
5.8	Key Words	135
5.9	Hints for Further Reading	135
5.10	Exercises.....	136
5.11	Solutions to the Exercises.....	137
Chapter 6	The Emergence of Temporal Order in the Economy	147
6.1	Introduction	147
6.2	The Economic Problem.....	148
6.3	Linear and Circular Economy	149
6.4	The Law of Supply and Demand.....	151
6.5	The Business Cycles.....	152
6.5.1	Goodwin's Predator-Prey Model.....	153
6.5.2	The Multiplier and Accelerator Model	156
6.5.3	Other Models	158
6.5.4	The Real Business Cycles	159
6.6	Key Questions	160
6.7	Key Words	160
6.8	Hints for Further Reading	160
6.9	Exercises.....	160
6.10	Solutions to the Exercises.....	161
Chapter 7	The Emergence of Temporal Order within a Living Being	167
7.1	Introduction	167
7.2	Metabolic Events	167
7.2.1	Michaelis-Menten Kinetics.....	168
7.2.2	Hill Kinetics.....	169
7.2.3	The Nonlinearity of Allosteric Enzymes.....	170
7.2.4	Glycolysis.....	174
7.3	Cellular Signaling Processes.....	176
7.3.1	The Simplest Signal Transduction System.....	176
7.3.2	Signal Transduction Systems with Positive Feedback	177
7.4	Epigenetic Events	181
7.5	Biological Rhythms.....	185
7.6	Amplification and Adaptation in Regulatory and Sensory Systems	187
7.6.1	Magnitude Amplification.....	187
7.6.2	Sensitivity Amplification	188
7.6.3	Adaptation.....	190
7.7	Key Questions	191

7.8	Key Words	192
7.9	Hints for Further Reading	192
7.10	Exercises	192
7.11	Solutions to the Exercises	193
Chapter 8	The Emergence of Temporal Order in a Chemical Laboratory	197
8.1	Introduction	197
8.2	The Discovery of Oscillating Chemical Reactions	197
8.3	The Systematic Design of Chemical Oscillators	199
8.3.1	Excitability	202
8.3.2	Oscillations	203
8.3.3	In Practice	203
8.4	Primary "Oscillators"	205
8.4.1	Oregonator Model: The "Primary Oscillator" of Coproduct Autocontrol	205
8.4.2	The Modified Lotka-Volterra or Predator-Prey "Primary Oscillator"	208
8.4.3	The "Flow Control Primary Oscillator"	212
8.4.4	The Composite System: A Chemical Equilibrium Coupled to a "Primary Oscillator"	214
8.4.5	"Delayed Negative Feedback Oscillator"	216
8.5	Overview and Hints for Further Reading	220
8.6	Key Questions	222
8.7	Key Words	222
8.8	Exercises	222
8.9	Solutions to the Exercises	227
Chapter 9	The Emergence of Order in Space	241
9.1	Introduction	241
9.2	The Reaction-Diffusion Model	241
9.3	Turing Patterns	246
9.4	Turing Patterns in a Chemical Laboratory	251
9.5	Turing Patterns in Nature	255
9.5.1	Biology: The Development of Embryos	256
9.5.2	Biology: Regeneration of Tissues	260
9.5.3	Biology: Phyllotaxis	261
9.5.4	Biology: Animal Markings	261
9.5.5	Ecology, Sociology, and Economy	263
9.5.6	Geomorphology	263
9.5.7	The Next Development of Turing's Theory: The Mechanochemical Patterning	264
9.6	Chemical Waves	269
9.6.1	Propagator-Controller Model	270
9.6.1.1	Phase Waves	271
9.6.1.2	Trigger Waves	271
9.6.2	Shapes of Chemical Waves	273
9.6.2.1	Mono- and Bi-Dimensional Waves	273
9.6.2.2	Three-Dimensional Waves	274
9.6.2.3	Effect of Curvature	274

9.7	“Chemical” Waves in Biology	275
9.7.1	Waves in a Neuron	275
9.7.2	The Fisher-Kolmogorov Equation.....	279
9.7.3	Waves in Our Brain.....	281
9.7.4	Waves in Our Heart.....	282
9.7.5	Calcium Waves.....	283
9.7.6	cAMP Waves: The Case of Dictyostelium Discoideum.....	284
9.7.7	Spreading of Species, Epidemics and ... Fads.....	285
9.8	Liesegang Patterns.....	285
9.9	Liesegang Phenomena in Nature	288
9.9.1	In Geology.....	288
9.9.2	In Biology.....	289
9.10	A Final Note: The Reaction-Diffusion Structures in Art and Technology	289
9.10.1	Reaction-Diffusion Processes as Art	289
9.10.2	Reaction-Diffusion Processes in Technology	290
9.11	Key Questions	290
9.12	Key Words	291
9.13	Hints for Further Reading	291
9.14	Exercises.....	291
9.15	Solutions to the Exercises.....	296
Chapter 10	The Emergence of Chaos in Time.....	317
10.1	Introduction	317
10.2	Nonlinearity and Chaos: The Case of the Double Pendulum	317
10.3	Nonlinearity and Chaos: The Case of the Population Growth and the Logistic Map.....	321
10.4	The Universality of Chaos.....	326
10.5	Convection.....	327
10.6	The Entropy Production in the Nonlinear Regime: The Case of Convection.....	332
10.7	The “Butterfly Effect”	334
10.7.1	The Complexity of Convection in the Terrestrial Atmosphere	334
10.7.2	The Lorenz’s Model	335
10.7.3	The Sensitivity to the Initial Conditions	338
10.7.4	The Hydrodynamic Photochemical Oscillator.....	340
10.8	Aperiodic Time Series.....	342
10.8.1	How Do We Recognize Chaotic Time Series?.....	343
10.8.1.1	Time Delay τ	343
10.8.1.2	Embedding Dimension m	344
10.8.1.3	Lyapunov Exponents	345
10.8.1.4	Kolmogorov-Sinai Entropy	346
10.8.1.5	Correlation Dimension	347
10.8.1.6	Permutation Entropy	347
10.8.1.7	Surrogate Data	348
10.8.1.8	Short-Term Predictability and Long-Term Unpredictability	348
10.8.2	Prediction of the Chaotic Time Series	349
10.8.2.1	Artificial Neural Networks	350

10.9	Mastering Chaos.....	352
10.9.1	Applications	354
10.9.1.1	Communication by Chaotic Dynamics.....	354
10.9.1.2	Computing by Chaotic Dynamics.....	354
10.10	Key Questions	355
10.11	Key Words	355
10.12	Hints for Further Reading	356
10.13	Exercises.....	356
10.14	Solutions to the Exercises.....	360
Chapter 11	Chaos in Space: The Fractals	379
11.1	Introduction	379
11.2	What Is a Fractal?.....	381
11.3	Fractal Dimension	383
11.4	Fractals That Are Not Perfectly Self-Similar.....	385
11.5	The Fractal-like Structures in Nature	386
11.6	The Dimensions of Fractals That Are Not Perfectly Self-Similar.....	388
11.7	A Method for Generating Fractal-like Structures in the Lab.....	389
11.8	Dendritic Fractals.....	392
11.9	Multifractals.....	394
11.9.1	Analysis of the Complex Images	394
11.9.2	Analysis of the Complex Time Series.....	395
11.10	Diffusion in Fractals	395
11.11	Chemical Reactions on Fractals and Fractal-like Kinetics in Cells	396
11.12	Power Laws or Stretched Exponential Functions?	399
11.13	Why Does Chaos Generate Fractals?.....	401
11.14	Chaos, Fractals, and Entropy	402
11.15	Key Questions	403
11.16	Key Words	403
11.17	Hints for Further Reading	404
11.18	Exercises.....	404
11.19	Solutions to the Exercises.....	405
Chapter 12	Complex Systems	415
12.1	The Natural Complexity Challenges.....	415
12.2	The Computational Complexity of the Natural Complex Systems.....	415
12.3	If It Were $NP = P$, Would Be the Complexity Challenges Surely Won? ..	419
12.4	The Features of Complex Systems.....	420
12.4.1	Networks	420
12.4.2	Out-of-Equilibrium Systems.....	426
12.4.2.1	The Thermodynamics of Thermal Radiation.....	426
12.4.2.2	The Fate of the Solar Thermal Radiation and the Climate Change	430
12.4.2.3	Solar Radiation and Life on Earth.....	431
12.4.2.4	Solar Radiation as an Energy Source for Life on Earth	433
12.4.2.5	Solar Radiation as Information Source for Life on Earth	437
12.4.3	Emergent Properties.....	444

12.5	Key Questions	446
12.6	Key Words	446
12.7	Hints for Further Reading	447
12.8	Exercises.....	447
12.9	Solutions to the Exercises.....	450
Chapter 13 How to Untangle Complex Systems?		457
13.1	Introduction	457
13.2	Improving Electronic Computers	457
13.3	Natural Computing.....	461
13.3.1	Computing Inspired by Natural Information Systems	462
13.3.1.1	Artificial Life, Systems Chemistry, Systems Biology, and Synthetic Biology	462
13.3.1.2	Membrane Computing.....	463
13.3.1.3	DNA and RNA Computing	464
13.3.1.4	Evolutionary Computing	467
13.3.1.5	Artificial Immune Systems	468
13.3.1.6	Cellular Automata	469
13.3.1.7	Artificial Intelligence, Fuzzy Logic, and Robots	471
13.3.1.8	Protein Computing	476
13.3.1.9	Amorphous Computing	477
13.3.1.10	Building Models of Complex Systems: ODEs, Boolean Networks, and Fuzzy Cognitive Maps	477
13.3.1.11	Agent-Based Modeling	479
13.3.2	Computing by Exploiting the Physicochemical Laws	482
13.3.2.1	Thermodynamics.....	482
13.3.2.2	Classical Physics.....	484
13.3.2.3	Computing with Subatomic Particles, Atoms, and Molecules.....	486
13.3.2.4	The “Ultimate Laptop”	491
13.4	Last Conclusive Thoughts and Perspectives	491
13.5	Last Motivating Sentences Pronounced by “Important People”	493
13.6	Key Questions	494
13.7	Key Words	494
13.8	Hints for Further Reading	495
13.9	Exercises.....	495
13.10	Solutions of the Exercises	497
Appendix A: Numerical Solutions of Differential Equations		503
Appendix B: The Maximum Entropy Method		507
Appendix C: Fourier Transform of Waveforms		513
Appendix D: Errors and Uncertainties in Laboratory Experiments		517
Appendix E: Errors in Numerical Computation		531
References		535
Index.....		559
