Partial Differential Equations

Third Edition

This book offers an ideal graduate-level introduction to the theory of partial differential equations. The first part of the book describes the basic mathematical problems and structures associated with elliptic, parabolic, and hyperbolic partial differential equations, and explores the connections between these fundamental types. Aspects of Brownian motion or pattern formation processes are also presented. The second part focuses on existence schemes and develops estimates for solutions of elliptic equations, such as Sobolev space theory, weak and strong solutions, Schauder estimates, and Moser iteration. In particular, the reader will learn the basic techniques underlying current research in elliptic partial differential equations.

This revised and expanded third edition is enhanced with many additional examples that will help motivate the reader. New features include a reorganized and extended chapter on hyperbolic equations, as well as a new chapter on the relations between different types of partial differential equations, including first-order hyperbolic systems, Langevin and Fokker-Planck equations, viscosity solutions for elliptic PDEs, and much more. Also, the new edition contains additional material on systems of elliptic partial differential equations, and it explains in more detail how the Harnack inequality can be used for the regularity of solutions.

1	Introduction: What Are Partial Differential Equations?	1
2	The Laplace Equation as the Prototype of an Elliptic Partial Differential Equation of Second Order	9
2.1	Harmonic Functions: Representation Formula for the Solution of the Dirichlet Problem on the Ball (Existence Techniques 0)	9
2.2	Mean Value Properties of Harmonic Functions. Subharmonic Functions. The Maximum Principle	19
3	The Maximum Principle	37
3.1	The Maximum Principle of E. Hopf	37
3.2	The Maximum Principle of Alexandrov and Bakelman	43
3.3	Maximum Principles for Nonlinear Differential Equations	49
4	Existence Techniques I: Methods Based on the Maximum Principle	59
4.1	Difference Methods: Discretization of Differential Equations	59
4.2	The Perron Method	68
4.3	The Alternating Method of H.A. Schwarz	72
4.4	Boundary Regularity	76
5	Existence Techniques II: Parabolic Methods. The Heat Equation	85
5.1	The Heat Equation: Definition and Maximum Principles	85
5.2	The Fundamental Solution of the Heat Equation. The Heat Equation and the Laplace Equation	97
5.3	The Initial Boundary Value Problem for the Heat Equation	105
5.4	Discrete Methods	122
6	Reaction–Diffusion Equations and Systems	127
6.1	Reaction–Diffusion Equations	127
6.2	Reaction–Diffusion Systems	135
6.3	The Turing Mechanism	139

7	Hyperbolic Equations	149
7.1	The One-Dimensional Wave Equation and the Transport Equation	149
7.2	First-Order Hyperbolic Equations	152
7.3	The Wave Equation.....	160
7.4	The Mean Value Method: Solving the Wave Equation Through the Darboux Equation.....	165
8	The Heat Equation, Semigroups, and Brownian Motion	173
8.1	Semigroups	173
8.2	Infinitesimal Generators of Semigroups.....	175
8.3	Brownian Motion.....	194
9	Relationships Between Different Partial Differential Equations	207
9.1	The Continuity Equation for a Dynamical System	207
9.2	Regularization by Elliptic Equations	209
10	The Dirichlet Principle. Variational Methods for the Solution of PDEs (Existence Techniques III)	215
10.1	Dirichlet's Principle	215
10.2	The Sobolev Space $W^{1,2}$	218
10.3	Weak Solutions of the Poisson Equation	230
10.4	Quadratic Variational Problems	233
10.5	Abstract Hilbert Space Formulation of the Variational Problem. The Finite Element Method	235
10.6	Convex Variational Problems	243
11	Sobolev Spaces and L^2 Regularity Theory	255
11.1	General Sobolev Spaces. Embedding Theorems of Sobolev, Morrey, and John–Nirenberg	255
11.2	L^2 -Regularity Theory: Interior Regularity of Weak Solutions of the Poisson Equation	271
11.3	Boundary Regularity and Regularity Results for Solutions of General Linear Elliptic Equations	280
11.4	Extensions of Sobolev Functions and Natural Boundary Conditions.....	289
11.5	Eigenvalues of Elliptic Operators.....	295
12	Strong Solutions	311
12.1	The Regularity Theory for Strong Solutions	311
12.2	A Survey of the L^p -Regularity Theory and Applications to Solutions of Semilinear Elliptic Equations	316
12.3	Some Remarks About Semilinear Elliptic Systems; Transformation Rules for Equations and Systems	321
13	The Regularity Theory of Schauder and the Continuity Method (Existence Techniques IV)	329
13.1	C^α -Regularity Theory for the Poisson Equation	329

13.2	The Schauder Estimates.....	340
13.3	Existence Techniques IV: The Continuity Method	346
14	The Moser Iteration Method and the Regularity Theorem of de Giorgi and Nash	353
14.1	The Moser–Harnack Inequality.....	353
14.2	Properties of Solutions of Elliptic Equations	366
14.3	An Example: Regularity of Bounded Solutions of Semilinear Elliptic Equations.....	371
14.4	Regularity of Minimizers of Variational Problems	376
	Appendix. Banach and Hilbert Spaces. The L^p-Spaces	393
	References.....	401
	Index of Notation	403
	Index.....	407
