|-----------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>KEYNOTES .....</b>                                                                                                             | <b>9</b>  |
| THE ELECTRONIC COMPONENT AUTHENTICITY - CRUCIAL PREREQUISITE FOR APPLICATION.....                                                 | 10        |
| THERMOMECHANICAL ANALYSIS IN MODERN MICROELECTRONICS .....                                                                        | 12        |
| IN SHORT ABOUT HEAT DISSIPATION ON PCBs.....                                                                                      | 14        |
| MODERN PASSIVE COMPONENTS AND TRENDS .....                                                                                        | 16        |
| DEVELOPMENT OF (AUTOMATIC) OPTIC INSPECTION COMPONENTS IN THE INDUSTRY AND FINDING DEFECTS .....                                  | 24        |
| MODERNÍ AKTIVNÍ SOUČÁSTKY .....                                                                                                   | 28        |
| APPLICATION OF CONDUCTIVE ADHESIVES FROM THE PERSPECTIVE OF THERMOMECHANICAL AND THERMODYNAMICAL PROPERTIES .....                 | 33        |
| HOW TO FULFILL DEMANDS FOR FUTURE ELECTRONIC ASSEMBLIES.....                                                                      | 35        |
| PORTFOLIO OF MODERN ELECTRONIC COMPONENTS .....                                                                                   | 41        |
| <b>ABSTRACTS .....</b>                                                                                                            | <b>43</b> |
| TESTING OF FIELD EMISSION ORTHODOXY BY USING A SIMPLE WEB APPLICATION .....                                                       | 44        |
| THE NONCONDUCTIVE SPUTTERED THIN FILM LAYER .....                                                                                 | 46        |
| AFFORDABLE CIRCUIT FOR ENERGY HARVESTING APPLICATIONS .....                                                                       | 48        |
| APPLICATION OF THE WIREBONDING TECHNOLOGY IN THE HOT WIRE ANEMOMETRY.....                                                         | 50        |
| ON UTILIZING PLASMA TO PRODUCE BARRIER COATINGS ON COLD FIELD-EMISSION CATHODES.....                                              | 52        |
| OPTIMIZATION OF APERTURES SHAPES IN STENCIL FOR ECA PRINTING TO CONNECTING OF SMD COMPONENTS ON PCBs .....                        | 54        |
| POWER SUPPLY FOR SPACE APPLICATIONS .....                                                                                         | 56        |
| IoT APPLICATIONS UTILIZING EXCESS HEAT IN ELECTRICAL LIGHTING FIXTURES.....                                                       | 58        |
| SMART SENSORS – ANOTHER FOUNDATION FOR INDUSTRY 4.0 .....                                                                         | 60        |
| LOW POWER WIDE AREA: A TECHNOLOGY FOR INTERNET OF THINGS .....                                                                    | 62        |
| ELIMINATION OF THE LEAKAGE INDUCTANCE OF THE PRIMARY WINDING OF AN IMPULSE TRANSFORMER FOR A CONTACT-LESS TEMPERATURE GAUGE ..... | 64        |
| INKJET-PRINTED CAPACITIVE TOUCH SENSORS FOR DIRECT HUMAN-ROBOT INTERACTION.....                                                   | 66        |
| ANALYZE OF POSSIBILITY USING NONSTANDARD UNIDIRECTIONAL LAMINATION FOR FACE DOWN TECHNOLOGY .....                                 | 68        |
| TRANSFER OF GRAPHENE FROM COPPER FOILS TO DIELECTRIC SUBSTRATES .....                                                             | 70        |
| BASIC EXAMPLE OF APPLYING EFFECTIVE COMPONENT SELECTION METHOD .....                                                              | 72        |
| FUNCTIONAL NANO-STRUCTURING OF THIN SILICON NITRIDE MEMBRANES .....                                                               | 74        |
| FAST PROCESS DETECTION OF CHEMICAL ELEMENTS .....                                                                                 | 76        |
| DERIVATION OF EXCHANGE TIMES FOR A MODEL OF TRAP-ASSISTED TUNNELLING IN GAN/ALGAN/GAN HETEROSTRUCTURES.....                       | 78        |

|                                                                                                                      |           |
|----------------------------------------------------------------------------------------------------------------------|-----------|
| ELECTROCHEMICAL MIGRATION OF LEAD-FREE SOLDERS AND AG-BASED ELECTRICALLY CONDUCTIVE ADHESIVES IN NaCl SOLUTION ..... | 80        |
| ENERGY CONSUMPTION OPTIMIZATION FOR THERMAL ENERGY HARVESTER APPLICATIONS .....                                      | 82        |
| DEVELOPMENT OF LOW-COST SOLDER PASTE HAND DISPENSER.....                                                             | 84        |
| THERMOELECTRIC GENERATOR IN LOW THERMAL GRADIENT OPERATION .....                                                     | 86        |
| <b>WORKSHOP.....</b>                                                                                                 | <b>89</b> |
| POKROČILÉ METODY OPRAV DPS A ELEKTRONICKÝCH SESTAV.....                                                              | 90        |
