

ORTNER'S IDENTIFICATION OF PATHOLOGICAL CONDITIONS IN HUMAN SKELETAL REMAINS

THIRD EDITION

EDITED BY JANE E. BUIKSTRA

Center for Bioarchaeological Research, School of Human Evolution and Social Change, Arizona State University, Tempe, USA

Ortner's Identification of Pathological Conditions in Human Skeletal Remains, Third Edition, provides an integrated and comprehensive treatment of the pathological conditions that affect the human skeleton. As ancient skeletal remains can reveal a treasure trove of information to the modern orthopedist, pathologist, forensic anthropologist, and radiologist, this book presents a timely resource. Beautifully illustrated with over 1,100 photographs and drawings, it provides an essential text and material on bone pathology, thus helping improve the diagnostic ability of those interested in human dry bone pathology.

KEY FEATURES

- Presents a comprehensive review of the skeletal diseases encountered in archaeological human remains
- Includes more than 1100 photographs and line drawings illustrating skeletal diseases, including both microscopic and gross features
- Based on extensive research on skeletal paleopathology in many countries
- Reviews important theoretical issues on how to interpret evidence of skeletal disease in archaeological human populations

Contents

List of Contributors	xiii	Structural Violence	26
Preface	xv	Ancient Humans and Impairment, Disability, and Care	26
A Tribute to Don Ortner	xvii	Osteobiography in Paleopathology	29
		References	31
1. Introduction	1	4. Fundamentals of Human Bone and Dental Biology: Structure, Function, and Development	35
<i>Jane E. Buikstra</i>		<i>Niels Lynnerup and Haagen D. Klaus</i>	
History of the First Edition <i>From Donald J. Ortner</i>	1	Skeletal Structure, Function, and Cellular Basis of Bone Biology	35
Acknowledgments for the First Edition	2	Evolution of the Vertebrate Skeleton	35
History of the Second Edition <i>From Donald J. Ortner</i>	3	Gross Function and Anatomy	36
Acknowledgments for the Second Edition	4	Bone Tissue: Composition and Organization	37
Objectives of the First and Second Editions	5	Cartilaginous Tissue	38
History of the Third Edition <i>From Jane E. Buikstra</i>	6	Bone Cells	39
Acknowledgments for the Third Edition	7	Molecules and Signaling Pathways: Master Control Mechanisms	40
Objectives of the Third Edition	7	Skeletogenesis and Bone Modeling	43
Format of the Volume	7	Embryological and Developmental Processes	43
Abbreviations	8	Bone Modeling	44
References	8	Bone Remodeling	48
		The Basic Multicellular Unit	49
2. A Brief History and 21st Century Challenges	11	Tooth Structure and Formation	52
<i>Jane E. Buikstra</i>		Enamel	52
A Brief History of Paleopathology	11	Dentin	52
21st Century Paleopathology	13	Periodontal Ligament and Cementum	53
Paleoepidemiology	14	Tooth Morphogenesis	53
Epidemiology and Paleoepidemiology	14	Conclusions	56
The Relationship Between Paleoepidemiology and Paleopathology	16	References	56
Paleoepidemiology and the Osteological Paradox	16		
References	17	5. Abnormal Bone: Considerations for Documentation, Disease Process Identification, and Differential Diagnosis	59
3. Themes in Paleopathology	21	<i>Haagen D. Klaus and Niels Lynnerup</i>	
<i>Anne L. Grauer and Jane E. Buikstra</i>		Abnormal Bone: General Considerations and Gross Appearance	59
Social and Identity Theory	21	Description of Abnormal Bone	62
Feminist and Gender Theory	22		
The Intersectionality of Sex, Gender, and Age	24		

Differential Diagnosis	81	Disorders of Bone Mineral Homeostasis: Hyperparathyroidism	137
Cases of Abnormal Bone: Modeling Description, Identification, and Differential Diagnoses	82	Disorders of Bone Mineral Homeostasis: Hyperthyroidism	138
Conclusion	87	Disorders of Bone Mineral Homeostasis: Diabetes mellitus	139
References	87	Disorders of Bone Mineral Homeostasis: Glucocorticoid Excess	141
6. Histomorphology: Deciphering the Metabolic Record	91	Collagen Disorders: Osteogenesis Imperfecta	143
<i>Samuel D. Stout, Mary E. Cole and Amanda M. Agnew</i>		Conclusion	146
Introduction	91	References	147
Visualization of Histological Structures in Dry Bone	92	7. The Role of Imaging in Paleopathology	169
Histomorphology: Deciphering the Metabolic Record	93	<i>Chiara Villa, Bruno Frohlich and Niels Lynnerup</i>	
The Cellular Basis of Bone Formation and Resorption	93	Why Is Medical Imaging Important?	169
Remodeling and the Morphology of the BMU	93	A Brief History of Radiology in Paleopathology	169
Calculation of Remodeling Parameters From BSUs	94	Basic Principles and Terminology	169
Application of Remodeling Parameters to Pathological Cases and Archeological Skeletal Populations	96	Radiographic Appearance of Pathologic Conditions	174
Why Bones Break: Histomorphometric Assessment of Bone Strength and Fragility	98	Mummies, Paleopathology, and Radiography	176
Mechanical Loading Shapes the Material and Structural Properties of Bone Tissue	99	Other Bone Changes and Radiography	176
Bone Strength at the Microscale: Microdamage as an Energy-Dissipating Mechanism	108	Harris Lines	176
Bone Strength at the Microscale: Lacunar- Canalicular Architecture Reflects Osteocyte Activity	112	Body Mass Calculations	177
Bone Strength at the Microscale: Vascular Porosity Reflects Resorption Activity	114	Osteoporosis	177
Bone Strength at the Microscale: Secondary Osteon Size and Shape as Toughening Mechanisms	117	Taphonomic Alterations	177
Structural Properties of Whole Bone in Cross-Section	120	Other Imaging Modalities	178
Pathology and Histomorphometry	125	Microcomputed Tomography	178
Remodeling Processes Commonly Disrupted by Pathology	125	Magnetic Resonance Imaging	178
Infection: Osteomyelitis	130	Conclusion	179
Cancer: Metastatic Bone Disease	131	References	179
Cancer: Osseous Bone Tumors	132	8. Ancient DNA in the Study of Ancient Disease	183
Imbalances of Bone Remodeling: Paget's Disease of Bone (PDB)	133	<i>Anne C. Stone and Andrew T. Ozga</i>	
Imbalances of Bone Remodeling: Osteopetrosis	134	Introduction to Ancient DNA	183
Disorders of Bone Mineral Homeostasis: Rickets/Osteomalacia	135	History/Trajectory of the Field	184
		Current Methods	185
		Applications of Ancient DNA	191
		Ancient DNA of Pathogens That Can Leave Bony Changes: Leprosy, Tuberculosis, Brucellosis, Malaria, Syphilis	191
		Mass Graves and "Invisible" Pathogens: Smallpox, Plague, Cholera, Enteric Dysentery, and Flu	195
		Parasites and Commensals (Lice, Worms, and the Microbiome)	198
		Future Prospects for Ancient Pathogen Research	200
