## **1. Bayesian quantile regression with the asymmetric Laplace distribution**

J.-L. Dortet-Bernadet, Y. Fan, T. Rodrigues

- 1.1. Introduction
- 1.2. The asymmetric Laplace distribution for quantile regression
- 1.3. On coverage probabilities
- 1.4. Postprocessing for multiple fittings
- 1.5. Final remarks and conclusion

References

## **2. A vignette on model-based quantile regression: analysing excess zero response**

Erika Cunningham, Surya T. Tokdar, James S. Clark

- 2.1. Introduction
- 2.2. Excess zero regression analysis
- 2.3. Case study data and objective
- 2.4. Fitting single covariate basal area models
- 2.5. Interpreting quantile regressions
- 2.6. Assessing model assumptions and making improvements
- 2.7. Prediction and interpreting predicted responses
- 2.8. Fitting multiple regression basal area models
- 2.9. Conclusions and final remarks

Acknowledgement

References

## **3. Bayesian nonparametric density regression for ordinal responses**

Maria DeYoreo, Athanasios Kottas

- 3.1. Introduction
- 3.2. Bayesian nonparametric density regression
- 3.3. Mixture modelling for ordinal responses
- 3.4. Summary

## **8. Bayesian spectral analysis regression**

Taeryon Choi, Peter J. Lenk

- 8.1. Introduction
- 8.2. Smooth operators
- 8.3. Bayesian spectral analysis regression
- 8.4. Shape constraints
- 8.5. Nonnormal distributions
- 8.6. R library bsamGP
- 8.7. Conclusion
- Acknowledgements
- References

## **9. Flexible regression modelling under shape constraints**

Andrew A. Manderson, Kevin Murray, Berwin A. Turlach

- 9.1. Introduction
- 9.2. Orthonormal design matrices
- 9.3. Monotonic polynomial model
- 9.4. Covariate selection
- 9.5. Conclusion
- References
