30.9.14	Coupled Transfer Function	1.2.00
30.9.15	Test Charts	1.2.00
30.9.16	Image Examples	5.00
30.10	Edge Criteria	5.00
30.10.1	Edge Width	1.2.00
30.10.2	Edge Sharpness	1.2.00
30.10.3	Accuracy and Edge	1.2.00
30.11	Resolution of Lenses	1.4.00
30.12	Tensional Structure	5.4.00
Preface	XIX	2.5.00
Introduction	XXI	1.2.00
29	Aberrations	1
29.1	Introduction	2
29.2	Power Series Expansions	8
29.3	Chromatic Aberrations	13
29.4	Primary Aberrations	16
29.4.1	Aperture and Field Dependence	16
29.4.2	Symmetry and Periodicity Properties	18
29.4.3	Presentation of Aberrations and their Impact on Image Quality	20
29.4.4	Calculation of the Seidel Sums	29
29.4.5	Stop Shift Formulae	36
29.4.6	Several Aberration Expressions from the Seidel Sums	38
29.4.7	Thin Lens Aberrations	41
29.5	Pupil Aberrations	45
29.6	High-order Aberrations	50
29.6.1	Fifth-order Aberrations	50
29.6.2	Seventh and Higher-order Aberrations	53
29.7	Zernike Polynomials	55
29.8	Special Aberration Formulae	56
29.8.1	Sine Condition and the Offence against the Sine Condition	57
29.8.2	Herschel Condition	60
29.8.3	Aplanatism and Isoplanatism	61
29.8.4	Aldis Theorem	61
29.8.5	Spherical Aberration, a Surface Contribution Formula	64
29.8.6	Aplanatic Surface and Aplanatic Lens	68
29.9	Literature	70
30	Image Quality Criteria	71
30.1	Introduction	74
30.2	Geometrical Aberrations	76

30.2.1	Transverse Aberrations	76
30.2.2	Spot Diagrams	77
30.3	Wave Aberrations	80
	Introduction	80
30.3.1	PV and RMS Value of the Wavefront	81
30.3.2	PV and RMS Values of Simple Aberrations	83
30.3.3	Influence of the Spatial Frequency	85
30.4	Strehl Ratio	87
30.4.1	Introduction	87
30.4.2	Simple Analytical Relations	89
30.4.3	Approximations of the Strehl Ratio	91
30.5	Special Criteria	96
30.5.1	Rayleigh Criterion	96
30.5.2	Marechal Criterion	97
30.5.3	80% Strehl Criterion	98
30.6	Criteria for PSF and Intensity Distributions	99
30.6.1	Introduction	99
30.6.2	Apodization	101
30.6.3	Spatial Moments	102
30.6.4	Kurtosis Parameter	104
30.6.5	Beam Quality M^2	106
30.6.6	Relation between M^2 and the Conventional Criteria	109
30.6.7	Spot or Beam Diameter	111
30.7	Point Resolution	113
30.7.1	Introduction	113
30.7.2	Incoherent Two-point Resolution	116
30.7.3	Coherent Two-point Resolution	121
30.8	Depth of Focus	124
30.8.1	Best Receiving Plane	127
30.8.2	Defocus Criterion of Fisher	130
30.8.3	Depth of Focus for Visual Detection	131
30.9	MTF Criteria	132
30.9.1	Introduction	132
30.9.2	Connection with other Criteria	134
30.9.3	MTF for Ideal and Defocused Systems	135
30.9.4	MTF for Aberrations	138
30.9.5	Sagittal and Tangential Structures	140
30.9.6	Polychromatic OTF	141
30.9.7	Geometrical Approximated Transfer Function GTF	142
30.9.8	Phase Transfer Function PTF	144
30.9.9	Argand Diagramm	146
30.9.10	Contrast Versus Resolution	147
30.9.11	Threshold Modulation	151
30.9.12	Hopkins Factor	153
30.9.13	Area Criteria of the MTF	155

30.9.14	Coherent Transfer Function	156	Coherence of Apertures	15
30.9.15	Test Charts	157	Synthesis	15
30.9.16	Image Examples	161	Incoherence	15
30.10	Edge Criteria	163	Line Spreading	16
30.10.1	Edge Width	163	Line Spreading	16
30.10.2	Edge Steepness	167	Power Spreading	16
30.10.3	Acutance and Edge Defect	168	Power Distribution	16
30.11	Line Criteria	168	Distances	16
30.11.1	Resolution of Lines	168	Spot Position	16
30.11.2	LSF Criterion of Struve	170	Respective Powers	16
30.11.3	Bossung Plots	171	Dispersion	16
30.12	Encircled Energy	175	Respective Powers	16
30.12.1	Introduction	175	GRIN Optical Lenses	16
30.12.2	Energy Curve of the Airy Pattern	177	Circular Patterns	16
30.12.3	Ensquared Energy	177	Aperture Patterns	16
30.12.4	Displaced Energy Criterion	178	Waves	16
30.13	Special Criteria	179	Diffraction Surface	16
30.13.1	Relative Ceiling	179	Summable Functions	16
30.13.2	Fidelity	180	Fringes	16
30.13.3	Structural Content	180	Monochromatic Aperture	16
30.13.4	Correlation	181	Supplementary Aperture	16
30.13.5	Relations and Comparison between the Criteria	181	Grays	16
30.14	Distortion	182	Aberrations	16
30.15	Color Aberrations	187	Residual Curvature	16
30.15.1	Transverse Color	187	Distortion	16
30.15.2	Longitudinal Color	188	High-order Aberrations	16
30.16	Transmission and Illumination	191	Chromatic Aberration	16
30.16.1	Illumination Fall-off	191	Airy Cutoff and Secondary Spectra	16
30.16.2	Special Illumination Profiles	193	Transverse Cutoff	16
30.17	Field Dependence of the Quality	194	Point Spread Function	16
30.18	Statistical Aberrations	199	Consequences of Aperture	16
30.18.1	Introduction	199	Integrals	16
30.18.2	Statistical Surfaces	199	Properties of Optics	16
30.18.3	Statistical Wave Aberrations	201	Point Spread Function	16
30.18.4	Point Spread Function in the Presence of Statistical Aberrations	202	Transfer Function	16
30.18.5	Transfer Function in the Presence of Statistical Aberrations	204	Atmospheric Perturbations	16
30.18.6	Atmospheric Perturbations	205	Special Aspects	16
30.19	Special Aspects	207	Complete Chain of Image Formation	207
30.19.1	Complete Chain of Image Formation	207	Local Diffraction	207
30.19.2	Discretization Problems	207	Type Cutoff Function	207
30.19.3	Motion Blur	208	One-dimensional	207
30.19.4	Special Imaging Modes	209	Sampling of the Recorded	207
30.19.5	Parasitic Light	209	Summation to the Recorded	207
30.19.6	Polarization	209	Ellipsoidal to Varying Wave Number	207
30.20	Literature	211	Performance of the Aperture	207

31	Correction of Aberrations	215	General Consideration	215	General Consideration	215
31.1	Strategies	216	Aperture Stop	216	Aperture Stop	216
31.1.1	Introduction	216	Image Plane Position	216	Image Plane Position	216
31.1.2	Lens Bending	218	Image Quality	218	Image Quality	218
31.1.3	Power Splitting	219	Image Width	219	Image Width	219
31.1.4	Power Combination	219	Image Distances	220	Image Distances	220
31.1.5	Distances	220	Stop Position	220	Stop Position	220
31.1.6			Refractive Index	221	Refractive Index	221
31.1.7			Dispersion	222	Dispersion	222
31.1.8			Relative Partial Dispersion	222	Relative Partial Dispersion	222
31.1.9			GRIN, Gradient Index Material	222	GRIN, Gradient Index Material	222
31.1.10			Cemented Surface	223	Cemented Surface	223
31.1.11			Aplanatic Surface	223	Aplanatic Surface	223
31.1.12			Aspherical Surface	223	Aspherical Surface	223
31.1.13			Mirror	224	Mirror	224
31.1.14			Diffractive Surface	224	Diffractive Surface	224
31.1.15			Symmetry Principle	225	Symmetry Principle	225
31.1.16			Field Lens	226	Field Lens	226
31.2	Monochromatic Aberrations	226				
31.2.1	Spherical Aberration	226				
31.2.2	Coma	242				
31.2.3	Astigmatism	250				
31.2.4	Petzval Curvature	252				
31.2.5	Distortion	261				
31.2.6	High-order Aberrations	265				
31.3	Chromatic Aberrations	268				
31.3.1	Axial Color and Secondary Spectrum	269				
31.3.2	Lateral Color	280				
31.3.3	Spherochromatism	283				
31.4	Coexistence of Aberrations	285				
31.5	Literature	289				
32	Principles of Optimization	291	Stochastic Methods	291	Stochastic Methods	291
32.1	Introduction	293	Simplex Method	293	Simplex Method	293
32.2	Numerics of Optimization	295	Point-to-Point Function	295	Point-to-Point Function	295
32.2.1	Notation	295	Linear Function	295	Linear Function	295
32.2.2	Linear Matrix Algebra	297	Quadratic Functions	297	Quadratic Functions	297
32.2.3	Local Expansion of the Error Function	299	One-dimensional Minimum Search	300	One-dimensional Minimum Search	300
32.2.4	The Control Function	300	Significance of the Result	304	Termination of the Iteration	305
32.2.5	One-dimensional Minimum Search	302				
32.2.6						
32.2.7						
32.2.8						
32.2.9	Efficiency of Variables and Weighting Factors	305				
	Performance of an Algorithm	307				

32.2.10	Numerical Calculation of Derivatives	307
32.3	Constraints	309
32.3.1	Introduction	309
32.3.2	Kuhn–Tucker Conditions	312
32.3.3	Penalty Function	313
32.3.4	Barrier Methods	315
32.4	Local Solution Methods	316
32.4.1	Introduction	316
32.4.2	Method of Steepest Descent	317
32.4.3	Method of Newton–Raphson without Constraints	319
32.4.4	Damped Least-squares Method without Constraints	320
32.4.5	Damped Least-squares Method with Constraints	322
32.4.6	Conjugate Gradient Method	323
32.4.7	Method of Davidon, Fletcher and Powell	324
32.4.8	Method of Levenberg–Marquardt	325
32.4.9	Orthogonalization of the System Matrix	326
32.4.10	Derivative-free Simplex Methods	327
32.4.11	Comparison of Algorithms	329
32.5	Global Optimization Methods	330
32.5.1	Introduction	330
32.5.2	Simulated Annealing	332
32.5.3	Genetic Optimization	335
32.6	Optimization of Optical Systems	337
32.6.1	Introduction	337
32.6.2	Example 1: Bending of a Thin Lens	338
32.6.3	Example 2: Achromatic Doublet	339
32.6.4	Parameters of Optical Systems	347
32.6.5	Constraints of Optical Systems	347
32.6.6	Merit Function	349
32.6.7	Special Aspects	350

A2.5.1	Tilted Surfaces Example	731
A2.5.2	Aspherical Surfaces Example	733
A2.5.3	Zoom Example	734
A2.5.4	Global Surface References	737
A2.6	Optical Design Import and Export	739
A2.7	OpTaliX-PRO Capabilities	742
A2.8	Obtaining OpTaliX-LT	747

Index 749

We would like to thank all the people who helped us to correct and improve the manuscript. In particular, we would like to thank Christian Fräser, Matthias Seegerberg, Christoph Menke and Stephan Kürmeier for proof reading parts of the text and for many helpful hints, corrections and suggestions. We also thank Michael Morn and Dietmar Göttsche for useful information and for their technical support in selecting the examples in chapter 35. Thanks are also due to Steffen Siegler for his helpful discussions.

Finally, we want to express our gratitude to Florian Becker from the University of Düsseldorf for making figure 13.7 available to us and giving permission for its inclusion in the book.

Once more, I want to thank my family for their continual understanding and patience during the progress of this work.
