

1.	X-Rays and Electrons.....	1
1.1	Introduction.....	1
1.2	Generation of X-Rays.....	2
1.3	Properties of X-Rays and Electrons.....	4
1.3.1	Wave-Particle Duality of Photons.....	4
1.3.2	Photoelectric Effect.....	4
1.3.3	Wave-Particle Duality of Electrons	5
1.4	Electronic Structure of Atoms	5
1.4.1	Models of the Atom.....	5
1.4.2	Electronic Transitions	8
1.5	Absorption Coefficients and Absorption Edges	10
1.5.1	Absorption Coefficients.....	10
1.5.2	Absorption Edges	11
1.5.3	True Absorption and Scattering.....	12
1.6	Interactions of Photons and Electrons with Matter	13
1.6.1	Excitations and Relaxations	14
1.6.2	Scattering	18
1.6.3	Electrons	19
 2.	 Extended X-Ray Absorption Fine Structure	
	(EXAFS) Spectroscopy.....	21
2.1	EXAFS Spectroscopy	22
2.2	Theory.....	24
2.3	Data Analysis	31

3.	EXAFS Parameters	34
3.1	Variables and Functions	34
3.2	Effects of Important Parameters	45
3.3	Convention of Changing E_0	52
4.	Theory of EXAFS	53
4.1	Introduction	53
4.2	Derivations of EXAFS Theory.....	54
4.2.1	Lee and Pendry (1975).....	55
4.2.2	Lee (1976).....	58
4.2.3	Boland, Crane, and Baldeschwieler (1982)	64
4.2.4	Curve-Wave Theory.....	71
4.3	EXAFS of L Edges.....	72
4.4	The Photoelectron and the Excited Atom	75
4.4.1	Lifetime of the Core Hole	75
4.4.2	Core Hole Relaxation	77
4.4.3	Potential Experienced by Photoelectron	78
4.4.4	Multi-electron Excitations	78
5.	Improvement of EXAFS Theory	79
5.1	Energy Threshold — The Phase Problem.....	80
5.1.1	Choosing E_0	80
5.1.2	Phase Transferability	80
5.1.3	Varying E_0	81
5.2	Inelastic Scatterings — The Amplitude Problem.....	84
5.2.1	Central Atom: Shake Up/Off Processes.....	85
5.2.2	Scatterer: Electron Inelastic Mean Free Path	89
5.3	Static and Thermal Disorder Effects	91
5.3.1	Small Disorders.....	94
5.3.1.1	Symmetric Pair Distribution	94
5.3.1.2	Discrete Bonds.....	96
5.3.1.3	Harmonic Vibration	99
5.3.2	Large Disorders.....	101
5.3.2.1	Derivation of the Generalized EXAFS Formalism.....	102
5.3.2.2	Moments of $g(r)$	103
5.3.2.3	Symmetric Pair Distributions.....	105

5.3.2.4	Asymmetric Pair Distributions.....	106
5.3.2.5	Anharmonic Vibration Potentials.....	111
5.3.2.6	Comparison of EXAFS and Diffraction	112
5.4	Multiple Scattering EXAFS Formalism.....	113
6.	Data Analysis in Practice	114
6.1	Data Reduction	114
6.1.1	Conversion of Experimental Variables.....	114
6.1.2	Background Removal.....	115
6.1.3	Normalization and μ_0 Correction.....	119
6.1.4	Conversion of E to k	120
6.1.5	Weighting Scheme	121
6.1.6	Deglitching and Truncation.....	124
6.2	Fourier Transform (FT)	124
6.3	Fourier Filtering (FF)	127
6.4	Curve Fitting (CF)	128
6.4.1	Parameterization	128
6.4.2	Phenomenological EXAFS Models	130
6.4.3	Least-squares Refinements	130
6.4.4	Correlations	131
6.4.5	Errors	132
6.5	Parameter Correlation and the FABM Method.....	133
6.5.1	Fine Adjustment Based on Models	134
6.5.2	Criteria for the Selection of Good Models	136
6.6	The "Difference" Technique	139
6.7	The Min-Max Method.....	142
6.8	Decomposition into Amplitude and Phase.....	146
6.8.1	Phase Information.....	149
6.8.2	Amplitude Information (The Ratio Method).....	149
6.9	The Beat-node Method	151
6.9.1	Derivations of Eq. 6.33-40.....	152
6.10	The Lee and Beni Method.....	153
6.11	The r Space Method.....	156
6.12	The Phase Linearization Method.....	157
6.13	The Regularization Algorithm	157
6.14	Other More Specialized Methods	157

7.	Theoretical Amplitude and Phase Functions	158
7.1	Introduction	158
7.2	Theoretical Methods	160
7.3	Theoretical Amplitude and Phase Functions.....	163
7.4	Properties of Amplitude and Phase Functions	164
7.4.1	Amplitude.....	165
7.4.2	Scatterer Phase	167
7.4.3	Central Atom Phase Shift	171
7.4.4	Effect of Electronic Configuration	171
7.4.5	Charge Effect	175
7.4.6	Comparison of ϕ_a^l ($l = 0, 1, 2$) Functions.....	175
7.4.7	Relativistic Effect.....	175
7.5	Comparison of Theory and Experiment.....	181
8.	Multiple Scattering and Bond Angle Determination	183
8.1	Scattering Amplitude and Phase.....	184
8.1.1	$F(\beta, k)$ and $\theta(\beta, k)$	187
8.2	Multiple Scattering.....	192
8.2.1	<i>ABC</i> Systems.....	194
8.2.1.1	Approximations	196
8.2.1.2	Anisotropic <i>ABC</i> Systems.....	207
8.2.2	Multiple Scattering: AB_1B_2C Systems.....	208
8.2.3	Multiple Scattering: Linear or Nearly Linear $AB_1B_2 \cdots B_nC$ Systems	210
8.3	Comparison of Theory and Experiment.....	212
8.4	Angle Determination.....	213
8.4.1	<i>ABC</i> Systems	213
8.4.1.1	Empirical Approach.....	219
8.4.2	$AB_1 \cdots B_nC$ Systems	220
8.5	Conclusion	220
	Bibliography	223
Appendix I.	The Periodic Table.....	285
Appendix II.	X-Ray Absorption Edges and Characteristic X-Ray Emission Lines	287
Appendix III.	Victoreen's C and D Values for True Absorption.....	291

Appendix IV.	Fluorescence Yields	297
Appendix V.	Backscattering Amplitude, Backscattering Phase, and Central Atom Phase	301
Appendix VI.	Tables of Scattering Amplitude, $F(\beta, k)$ in Å, and Phase, $\theta(\beta, k)$ in Radians, Functions.....	315
Appendix VII.	Graphs of Scattering Amplitude, $F(\beta, k)$ in Å, and Phase, $\theta(\beta, k)$ in Radians, vs. Photoelectron Wavevector k in Å ⁻¹ for Some Elements at Different Scattering Angles, β in Degrees.....	337
Index.....		347
