Chapter 1 – THE HIP	2
The hip joint (coxofemoral joint).....	2
The hip: the joint at the root of the lower limb	4
Movements of flexion at the hip joint	6
Movements of extension at the hip joint	8
Movements of extension at the hip joint	8
Movements of abduction at the hip joint.....	10
Movements of adduction at the hip joint.....	12
Movements of axial rotation at the hip joint	14
Movements of circumduction at the hip joint	16
Orientation of the femoral head and of the acetabulum.....	18
The femoral head.....	18
The acetabulum	18
Relationships of the articular surfaces	20
The architecture of the femur and of the pelvis	22
The acetabular labrum and the ligament of head of femur	24
The articular capsule of the hip joint	26
The ligaments of the hip joint	28
Role of the ligaments in flexion-extension	30
Role of the ligaments in lateral-medial rotation	32
Role of the ligaments in adduction-abduction	34
The functional anatomy of the ligament of head of femur.....	36
Coaptation of the articular surfaces of the hip joint.....	38
Muscular and bony factors maintaining the stability of the hip joint	40
The flexor muscles of the hip joint	42
The extensor muscles of the hip joint	44
The abductor muscles of the hip joint.....	46
Hip abduction.....	48
The transverse stability of the pelvis	50
The adductor muscles of the hip joint.....	52
The adductor muscles of the hip joint (continued)	54
The lateral rotator muscles of the hip joint	56
Rotator muscles of the hip joint	58
Inversion of muscular actions	60
Inversion of muscular actions (continued).....	62
Successive recruitment of the abductor muscles.....	64
Chapter 2 – THE KNEE.....	66
The axes of the knee joint	68
Axial rotation of the knee	74
General architecture of the lower limb and orientation of the articular surfaces.....	76
Torsion at the level of the knee.....	78
Torsion at the level of the tibia.....	78
The result of these torsions.....	78
The articular surfaces of flexion-extension.....	80

The tibial articular surfaces in relation to axial rotation.....	82
Profiles of the femoral condyles and of the tibial articular surfaces.....	84
Determinants of the condylotrochlear profile.....	86
Movements of the femoral condyles on the tibial plateau during flexion-extension.....	88
Movements of the femoral condyles on the tibial plateau during axial rotation.....	90
The articular capsule.....	92
The ligamentum mucosum, the synovial plicae and the joint capacity.....	94
The inter-articular menisci.....	96
Meniscal displacements during flexion-extension.....	98
Meniscal displacements during axial rotation meniscal lesions.....	100
Patellar displacements relative to the femur.....	102
Femoropatellar relationships.....	104
Patellar movements relative to the tibia.....	106
The collateral ligaments of the knee.....	108
Transverse stability of the knee.....	110
Transverse stability of the knee (continued).....	112
Anteroposterior stability of the knee.....	114
The peri-articular defence system of the knee.....	116
The cruciate ligaments of the knee.....	118
Relations between the capsule and the cruciate ligaments.....	120
The direction of the cruciate ligaments.....	122
The mechanical role of the cruciate ligaments.....	124
The mechanical role of the cruciate ligaments (continued).....	126
The mechanical role of the cruciate ligaments (final).....	128
Rotational stability of the extended knee.....	130
Rotational stability of the extended knee (continued).....	132
Rotational stability of the extended knee (final).....	134
Dynamic tests of the knee during medial rotation.....	136
Dynamic tests for rupture of the anterior cruciate ligament.....	138
Dynamic tests of the knee during lateral rotation.....	140
The extensor muscles of the knee.....	142
Physiological actions of the rectus femoris.....	144
The flexor muscles of the knee.....	146
The rotator muscles of the knee.....	148
Automatic rotation of the knee.....	150
Automatic rotation of the knee (continued).....	152
Dynamic equilibrium of the knee.....	154

Chapter 3 – THE ANKLE 156

The articular complex of the foot.....	158
Flexion-extension.....	160
The articular surfaces of the ankle joint.....	162
The articular surfaces of the ankle joint (continued).....	164
The ligaments of the ankle joint.....	166
Anteroposterior stability of the ankle and factors limiting flexion-extension.....	168
Transverse stability of the ankle joint.....	170
The tibiofibular joints.....	172
Functional anatomy of the tibiofibular joints.....	174
Why does the leg have two bones?.....	176

Chapter 4 – THE FOOT 178

Axial rotation and side-to-side movements of the foot..... 180

The articular surfaces of the subtalar joint..... 182

Congruence and incongruence of the articular surfaces of the subtalar joint..... 184

The talus: the unusual bone..... 186

The ligaments of the subtalar joint..... 188

The transverse tarsal joint and its ligaments 190

Movements at the subtalar joint 192

Movements at the subtalar and transverse tarsal joints 194

Movements at the transverse tarsal joint 196

The overall functioning of the posterior tarsal joints 198

 Movement of inversion..... 198

 To sum up 198

 Movement of eversion 198

 To sum up 198

The heterokinetic universal joint of the hindfoot..... 200

The ligamentous chains during inversion and eversion 202

 Factors restricting the movement of inversion..... 202

 Factors restricting the movement of eversion 202

The cuneonavicular, intercuneiform and tarsometatarsal joints 204

Movements at the anterior tarsal and tarsometatarsal joints 206

Extension of the toes..... 208

The compartments of the leg..... 210

The compartments of the leg (continued)..... 212

The interosseous and the lumbrical muscles..... 214

The muscles of the sole of the foot..... 216

The fibrous tunnels of the instep and of the sole of the foot..... 218

The flexor muscles of the ankle 220

The triceps surae 222

The triceps surae (continued)..... 224

The other extensor muscles of the ankle..... 226

The abductor-pronator muscles: the fibularis muscles fibulaires..... 228

The adductor-supinator muscles: the tibialis muscles..... 230

Chapter 5 – THE PLANTAR VAULT 232

Overview of the plantar vault..... 234

The medial arch..... 236

The lateral arch 238

The anterior arch and the transverse arch of the foot..... 240

The distribution of loads and static distortions of the plantar vault..... 242

Architectural equilibrium of the foot 244

Dynamic distortions of the plantar vault during walking 246

 First period: Heel strike or contact with the ground..... 246

 Second period: Maximal contact..... 246

 Third period: First stage of active propulsion 246

 Fourth period: Second stage of active propulsion 246

Dynamic distortions of the plantar vault secondary to inclination of the leg on the inverted foot..... 248

Dynamic distortions of the plantar vault secondary to inclination of the leg on the everted foot..... 250

Adaptation of the plantar vault to the terrain..... 252

The various types of pes cavus..... 254

The various types of pes planus	256
Imbalances of the anterior arch	258
Types of feet	260

Chapter 6 – WALKING **262**

The move to bipedalism	264
The miracle of bipedalism	266
The initial step and those that follow it	268
Swing phase of the gait cycle	270
The stance phase of the gait cycle	272
The footprints	274
Pelvic oscillations	276
Tilting of the pelvis	278
Torsion of the trunk	280
Swinging of the upper limbs	282
Muscles involved in walking	284
Muscular chains during running	286
The different types of walking and jumping	288
Military marches and dancing	290
Walking is freedom	292

APPENDICES **295**

The nerves of the lower limb	296
Sensory compartments of the lower limb	298
Bibliography	301
Index	303
Models of joint biomechanics	309
