

Foreword	III
1. Introduction and historical survey	1
2. The origin of organic matter in sedimentary rocks	6
2.1 Organic productivity and the preservation of organic matter	6
2.2 Preservation of organic matter as peat and coal	6
2.21 Origin of mires	7
2.211 Evolutionary development of the flora	7
2.212 Climate	10
2.213 Paleogeographic and tectonic factors	11
2.213.1 Paleogeography and environments of deposition	12
2.213.2 Tectonics	23
2.22 Peat growth, compression and the time needed for a seam to form	25
2.23 Development of coal facies	26
2.231 Type of deposition (autochthonous, allochthonous)	27
2.232 Peat-forming plant communities	28
2.233 Depositional environments (telmatic, limnic, brackish-marine, calcium-rich)	34
2.234 Nutrient supply (eutrophic, oligotrophic)	36
2.235 Acidity, bacterial activity, sulfur	37
2.236 Temperature	40
2.237 Redox potential	40
2.24 Peatification	42
2.241 Conditions of peatification	42
2.242 Chemical and microbial processes of peatification	43
2.243 Peatification under the microscope	44
2.244 Common parameters of peatification	47
2.3 Deposition and preservation of organic matter in sedimentary rocks other than coal	48
2.31 Depositional environments of oil and gas source rocks	48
2.311 Overview	48
2.312 Deep marine environments	50
2.313 Shallow marine environments	59
2.314 Lakes	65
2.315 Fluviodeltaic coal-bearing strata	69
2.32 Early alteration and diagenesis of sedimentary organic matter other than coal	73
2.321 Alteration of organic matter in the water column	73
2.322 Alteration of organic matter during early diagenesis	75

2.33	Accumulation rates of organic matter-rich sediments other than coal	80
2.34	Migrabitumen in rocks	82
3.	Coalification and maturation	86
3.1	Geological causes of coalification and maturation	87
3.11	The effect of temperature	87
3.12	The effect of time	91
3.13	The effect of pressure	93
3.2	Coalification and maturation processes	99
3.21	Coalification processes	99
3.211	Chemical and physical changes	99
3.212	Petrographic changes	116
3.22	Maturation processes	126
3.221	Chemical changes	128
3.222	Petrographic changes	132
3.3	Kinetics of coalification and maturation	140
3.31	Present-day geothermics, their representation and occurrence	140
3.32	The kinetics of the thermal transformation of organic matter	143
3.33	Applications of the theoretical simulation	145
3.34	The calibration of vitrinite reflectance in basin modelling	149
3.4	Parameters of rank and maturity	155
3.41	Parameters of rank	156
3.42	Parameters of maturity	159
3.5	Thermal alteration and the formation of natural coke	162
3.51	Introduction	162
3.511	Coal	163
3.512	Other rocks	164
3.52	Microstructure	164
3.521	Groundmass	165
3.522	Original organic constituents	165
3.523	Newly-formed organic constituents	169
3.524	Mineralogical changes	169
3.53	Reflectance	170
3.531	Relation between reflectance and chemical composition	170
3.532	Effect of pressure	171
3.533	Evaluation of temperature of alteration	172
3.54	Heat alteration of oxidized organic matter	172
4.	The nature of organic matter – macerals and associated minerals	175
4.1	Introduction	175
4.2	Nature of petrographic constituents	175
4.21	The maceral concept	175
4.22	Maceral groups	176
4.23	The influence of rank on the properties of macerals	178

4.3	Macerals of the huminite/vitrinite group	180
4.31	Chemical and botanical precursors	181
4.32	Changes during peatification and coalification	190
4.33	Individual macerals	194
4.331	Telinite, telocollinite	194
4.332	Desmocollinite, vitrodetrinite, degradinite	196
4.333	Gelocollinite	197
4.334	Corpocollinite	198
4.335	Pseudovitrinite	199
4.4	Macerals of the liptinite group	201
4.41	Chemical and botanical precursors	201
4.42	Changes during peatification and coalification	201
4.43	Individual macerals	203
4.431	Sporinite	203
4.432	Cutinite	207
4.433	Resinite	209
4.433.1	Terpene resinite	209
4.433.2	'Resinite' derived from lipids	211
4.434	Fluorinite	212
4.435	Alginite	214
4.436	Suberinite	217
4.437	Liptodetrinite	217
4.438	Bituminite	220
4.439	Chlorophyllinite	223
4.43.10	Exsudatinite	223
4.5	Macerals of the inertinite group	226
4.51	Chemical and botanical precursors	226
4.52	Changes during peatification and coalification	227
4.53	Individual macerals	227
4.531	Fusinite and semifusinite	227
4.531.1	Pyrofusinite	229
4.531.2	Degradofusinite (oxyfusinite)	229
4.531.3	Rank fusinite	233
4.531.4	Primary fusinite	233
4.532	Sclerotinite	234
4.533	Macrinite	236
4.534	Inertodetrinite	236
4.535	Micrinite	237
4.6	Macerals in oil shales and other petroleum source rocks	238
4.61	Lithological and geochemical features of petroleum source rocks	238
4.62	Characteristics of macerals and their origin	241
4.63	Macerals in lacustrine petroleum source rocks	245
4.64	Macerals in marine petroleum source rocks	247
4.65	The nature of unstructured organic matter	250
4.66	Changes during maturation	251
4.67	Concluding remarks	254
4.7	Inorganic matter associated with the macerals of coal	255
4.71	Minerals	256

4.711	Clay minerals	257
4.712	Quartz	260
4.713	Carbonate minerals	261
4.714	Sulfides	264
4.715	Less abundant minerals	265
	4.715.1 Phosphates	265
	4.715.2 Heavy minerals	266
	4.715.3 Salts	267
	4.715.4 Other minerals	267
4.72	Trace elements	268
	4.721 Modes of occurrence	268
	4.722 Some geological aspects	269
	4.723 Radioactivity	270
	4.724 Contents of trace elements in coals	270
	4.725 Concluding remarks	271
4.8	Oxidized organic matter in coal	271
5.	Lithotypes and microlithotypes	275
5.1	Introduction	275
5.2	Coals and coaly shales	275
	5.21 Lithotypes	275
	5.211 The lithotype concept	275
	5.212 Humic coals (other than soft brown coals)	276
	5.212.1 Vitrain	276
	5.212.2 Clarain	277
	5.212.3 Durain	277
	5.212.4 Fusain	277
	5.212.5 Mineral-rich lithotypes (other than tonsteins)	277
	5.212.6 Tonsteins	278
	5.213 Brown coals	279
	5.213.1 Nature and origin of lithotypes in brown coal	279
	5.213.2 The classification of brown coal lithotypes	279
	5.213.21 Matrix coal	280
	5.213.22 Xylite-rich coal	281
	5.213.23 Charcoal-rich coal	281
	5.213.24 Mineral-rich coal	281
	5.214 Sapropelic coals	281
5.22	Microlithotypes	282
	5.221 The microlithotype concept	282
	5.222 Microlithotypes of humic coals	285
	5.222.1 Vitrite	285
	5.222.2 Liptite	288
	5.222.3 Inertite	288
	5.222.4 Clarite	289
	5.222.5 Vitrinertite	290
	5.222.6 Durite	290
	5.222.7 Trimacerite	292
	5.222.8 Carbominerite	293

5.223	Physical and chemical properties of microlithotypes in humic coals .	294
5.224	Sapropelic coals and liptobioliths	295
5.224.1	Sapropelic coals	295
5.224.11	Cannel coals	297
5.224.12	Boghead coals	299
5.224.2	Liptobioliths	299
5.3	Organic matter-rich sediments other than coal	301
5.31	Clastic rocks with terrigenous organic matter (carbonaceous rocks)	301
5.32	Rocks with 'aqueous' organic matter (sapropelic rocks)	303
5.33	Rocks with secondary organic matter (impregnated rocks)	304
6.	Some important coals and other carbonaceous rocks of the world	306
6.1	Introduction	306
6.2	Pre-Carboniferous carbonaceous rocks	306
6.3	Carboniferous carbonaceous rocks	310
6.31	Carboniferous coals	310
6.311	Macroscopic seam characteristics	311
6.312	Microscopic petrography	311
6.312.1	Macerals	312
6.312.11	Vitrinite group	312
6.312.12	Liptinite group	312
6.312.13	Inertinite group	313
6.312.2	Mineral matter	313
6.313	Use and assessment	314
6.32	Other Carboniferous carbonaceous rocks	314
6.4	Permian carbonaceous rocks	314
6.41	Permian coals	314
6.411	Macroscopic seam characteristics	315
6.412	Microscopic petrography	315
6.412.1	Macerals	315
6.412.11	Vitrinite group	316
6.412.12	Liptinite group	317
6.412.13	Inertinite group	319
6.412.14	Possible reasons for the characteristic maceral composition of some Gondwana coals	321
6.412.2	Mineral matter	322
6.413	Rank: thermal and tectonic alteration	324
6.414	Use and assessment of coals	325
6.42	Other Permian carbonaceous rocks	325
6.5	Mesozoic carbonaceous rocks	325
6.51	Mesozoic coals	325
6.511	Macroscopic seam characteristics	327
6.512	Microscopic petrography	327
6.52	Mesozoic carbonaceous rocks other than coal	329

6.6	Cenozoic carbonaceous rocks	330
6.61	Tertiary coals	330
6.611	Macroscopic seam characteristics	330
6.612	Microscopic petrography	330
6.613	Use and assessment	332
6.62	Quaternary coals	333
6.63	Other Cenozoic carbonaceous rocks	333
6.7	Overview	333
7.	Methods and procedures	335
7.1	Sampling	335
7.11	Coal samples	335
7.111	Column (or pillar) samples	336
7.112	Channel samples	336
7.113	Drill cores	337
7.114	Run-of-mine and prepared coal products	337
7.115	Oriented specimens	337
7.116	Grab specimens	337
7.117	Reduction of coal samples	338
7.12	Dispersed organic matter	339
7.13	Other specimens	340
7.2	Macroscopic description of organic and associated sedimentary rocks	340
7.21	Macroscopic description of coals	340
7.211	Purpose	340
7.212	Preparation for examination	341
7.213	Visual descriptive systems	341
7.213.1	Hard coals	341
7.213.2	Low-rank coals	343
7.214	Non-visual methods of recording coal lithologies	344
7.22	Description of inter-seam strata	346
7.23	Description of rock samples for the study of organic matter	346
7.24	Description of oil shales	347
7.3	Sample preparation for microscopical study	347
7.31	Polished blocks	348
7.32	Polished particulate mounts for coal	348
7.321	Simple moulding	349
7.322	Pressure moulding	350
7.323	Polishing procedure	351
7.324	Special applications	352
7.33	Strew mounts for organic concentrates	353
7.34	Polished mounts for dispersed organic matter	353
7.35	Thin sections of coal and dispersed organic matter	353
7.36	Polished thin sections	354
7.37	Preparation for electron microscopical examinations	355
7.371	SEM	356
7.372	TEM	356
7.38	Liquefaction residues	357

7.4	Maceral analysis	358
7.41	Theoretical basis of the analysis	358
7.42	Methods of analysis	360
7.421	White light maceral analysis	360
7.422	Combined white/blue light maceral analysis	363
7.43	Reporting and statistical significance of results	364
7.5	Microlithotype analysis	367
7.51	General remarks	367
7.52	Identification of microlithotypes	368
7.53	The 20-point ocular method	369
7.531	Equipment	369
7.532	Procedure	369
7.533	Evaluation and presentation of results	370
7.534	Accuracy of analysis	370
7.54	The selon-la-ligne method	370
7.6	Reflectance	371
7.61	General remarks	371
7.62	Theory	372
7.621	Interrelations of reflectance, refractive index and absorption coefficient	372
7.622	Anisotropy and bireflectance	373
7.63	Equipment and accessories	379
7.631	Light source	380
7.632	Polarizer	380
7.633	Vertical illuminator	380
7.634	Objectives	382
7.635	Object stage	382
7.636	Eyepieces	382
7.637	Limiting aperture	382
7.638	Monochromatic filter	383
7.639	Photometric system	383
7.63.10	Display and recorder	384
7.63.11	Levelling device	384
7.63.12	Immersion oil	384
7.64	Reflectance standards	385
7.65	Set-up	387
7.66	Reflectance procedure	388
7.67	Reporting and significance of results	391
7.7	Image analysis and automated specimen-plane scanning	391
7.71	Comparison of image-plane to specimen-plane automated analysis	391
7.72	Specimen-plane scanning	394
7.73	Video image analysis	398
7.731	General remarks	398
7.732	Background	399
7.732.1	Comparison to human vision	399
7.732.2	History	399
7.732.3	Theory	399
7.732.4	Image processing and analysis	400

7.733	Equipment	401
7.733.1	Microscope	401
7.733.2	Camera	402
7.733.3	Computer and image acquisition interface	403
7.733.4	Software	403
7.734	Procedures and applications	404
7.734.1	Sample preparation	404
7.734.2	Reflectance analysis	404
7.734.3	Maceral analysis	405
7.734.4	Lithotype and microlithotype analysis	406
7.734.5	Pyrite particle size, shape, morphology and association	406
7.734.6	Other applications	406
7.8	Fluorescence microscopy	407
7.81	General remarks	407
7.82	Chemical basis of fluorescence	408
7.83	Fluorescence techniques	414
7.831	Visual examination	416
7.831.1	Equipment	416
7.831.2	Global fluorescence index	417
7.832	Quantitative spectral fluorescence analysis	418
7.832.1	Equipment	418
7.832.2	Set-up	420
7.832.3	Procedure	422
7.832.4	Spectral parameters	423
7.833	Determination of fluorescence intensity	425
7.833.1	Introduction	425
7.833.2	Equipment	427
7.833.3	Set-up and procedures	428
7.833.4	Parameters	428
7.9	Some geochemical methods which complement organic petrology	428
7.10	Etching and staining techniques	434
7.10.1	Etching of polished coal surfaces	434
7.10.2	Staining of polished coal surfaces	437
7.11	Determination of hardness	438
7.11.1	General remarks	438
7.11.2	Method of measurement	439
7.12	Coke microscopy	441
7.12.1	General remarks	441
7.12.2	Measurement of microstructure	442
7.12.3	Measurement of microtexture	442
7.13	The study of liquefaction residues and reactor solids	446
7.13.1	Introduction	446
7.13.2	Techniques used in residue petrography	447
7.14	Microscopy of combustion and pyrolysis chars	447

8. Geological applications	451
8.1 Methodology of organic petrology applied to geological problems	451
8.11 Determination of rank for sedimentary rocks other than coal	451
8.111 Selection of samples	452
8.112 Concentration of organic matter	453
8.113 Preparation of sections	453
8.114 Reflectance measurements on vitrinite	454
8.115 Fluorescence microscopy	457
8.12 Microscopical analysis of organic matter in rocks other than coal	458
8.2 Diagenesis and metamorphism of minerogenic rocks in relation to coalification	459
8.21 Diagenesis	460
8.22 Very low-grade metamorphism (anchimetamorphism)	462
8.23 Low-grade metamorphism	465
8.24 High-grade metamorphism	465
8.3 Seam correlation, stratigraphy, paleogeography (basins) and tectonics (structural problems)	466
8.31 Seam identification and correlation	466
8.311 Methods of seam identification	466
8.312 Seam identification using petrological methods	467
8.312.1 Marker seams	467
8.312.2 Petrographic seam sections – lithotypes	468
8.312.3 Microlithotypes	469
8.312.4 Microscopic seam identification – dull layers	470
8.312.5 Crassidurite seams	470
8.312.6 Maceral analysis	471
8.313 Swelling index profiles	471
8.314 Seam identification using spores	472
8.314.1 Spore analysis	472
8.314.2 Spore frequency diagrams	472
8.315 Seam identification using determination of rank	472
8.32 Stratigraphy	473
8.33 Paleogeography (basins)	474
8.34 Tectonics	479
8.4 Organic petrology in relation to geothermics	488
8.41 Stable domains	490
8.42 Crustal distensions (rift basins)	490
8.43 The convergent systems of the crust (island arcs)	494
8.5 Exploration for hydrocarbons	496
8.51 Source rocks	497
8.511 Geochemistry of source rocks	497
8.512 Organic petrology of source rocks	498
8.52 Thermal maturation	501
8.53 Limits of maturity stages for the generation and disappearance of petroleum and dry gas (methane)	505
8.54 Coal as a source and reservoir rock for oil and gas	506
8.55 Basin studies related to oil and gas prospecting	507

8.56	Examples of basins where oil and gas are present	507
8.561	The Congo Basin, West Africa	508
8.562	The Sahara basins, with separate oil and gas provinces	508
8.563	Oil and gas in northern Germany	511
8.564	The West Siberian Basin	511
8.6	Ore genesis and related applications	513
8.61	Ore genesis	513
8.62	Other mineral/organic matter interactions	516
8.7	Other applications of organic petrology	517
8.71	Soil, refuse, effluents	517
8.72	Archaeology	517
8.73	Sediment provenance	518
9.	Technological applications	519
9.1	Coal exploration	521
9.2	Coal preparation	525
9.21	The influence of crushing and screening on the petrographic composition of coal	525
9.22	The influence of density separation on the petrographic composition of coal	526
9.23	The effect on coal properties of oxidation, storage and shipping	528
9.3	Coal carbonization	530
9.31	The transformation of coal into coke	532
9.311	The effect of coal rank on carbonization and coke fabric	538
9.312	The effect of coal type on carbonization and coke fabric	544
9.312.1	Inertinite	546
9.312.2	Liptinite	547
9.312.3	Vitrinite	550
9.32	The petrology of coke	551
9.33	The relationship between coke composition and its quality	553
9.34	The relationship between feed coal and coke quality	559
9.341	Petrographic methods of coke stability estimation	559
9.341.1	The predictive models	559
9.341.2	Methods of assessing maceral fusibility	564
9.341.21	Direct methods of determining maceral fusibility	567
9.341.22	Indirect methods of determining maceral fusibility	572
9.341.23	Other considerations	580
9.342	Mixed petrographic and chemical methods of estimating coke stability	581
9.35	Petrographic aspects of blending	584
9.36	Additional coal uses and future developments in the iron and steel industry	589
9.4	Coal combustion	590
9.41	Pulverized coal combustion	592
9.411	From ignition to burnout	593

9.412	The origin of unburnt carbon in ash	598
9.412.1	The effects of coal rank on char burn-off	599
9.412.2	The effects of coal type on char burn-off	600
9.413	Inorganic flyash	600
