Part 2: The Insect Perspective		
<hr/>		
5	Insects and Their Chemistry	83
5.1	Introduction	83
5.2	Insects Communicating: Pheromones	87
5.3	Colorful Insects	90
5.4	Light-producing Insects	93

5.5	Defensive Insects	94
5.6	Insects and Their Hormones	97
5.7	Conclusions	98
	References	99

6 Insects Feeding on Plants 101

6.1	Introduction	101
6.2	Basic Insect Diet	102
6.3	How Insects Select Food Plants	108
6.4	Conclusions	109
	References	110

7 Plant Galls: Protection and Food for the Young 111

7.1	Introduction	111
7.2	Galls and Their Chemistry	114
7.3	Mysteries of Gall Formation	115
7.4	Conclusions	116
	References	117

8 Insects That Use Plant Defenses for Their Own Protection 118

8.1	Introduction	118
8.2	Monarchs, Milkweeds, and Cardiac Glycosides	119
8.3	<i>Heliconius</i> Butterflies, Passion Vines, and Cyanides	123
8.4	Pipevine Butterflies, Pipevines, and Alkaloids	125
8.5	Moths, Ragworts, and <i>Senecio</i> Alkaloids	126
8.6	Conclusions	129
	References	129

9 Insects That Provide Protection for Plants 131

9.1	Introduction	131
9.2	Ant Plants	132

9.3	Diverse Mutualistic Insect–Plant Interactions	135
9.4	Conclusions	136
	References	137

Part 3: Plants and Insects: The Human Perspective

10	Human Uses	141
10.1	Introduction	141
10.2	Essential Pollination for Food Production	141
10.3	Honey	143
10.4	Beeswax	149
10.5	Silk	152
10.6	Dyes From Insects	155
10.7	Insecticides From Plants	156
10.8	Conclusions	159
	References	160

11	Plant–Insect Interactions and the Human Role	162
11.1	Introduction	162
11.2	Insects That Damage Crop Plants	162
11.3	Approaches to Managing Insect Pests	164
11.4	Synthetic Insecticides	165
11.5	Conclusions	167
	References	167
