<b>List of Protocols .....</b>	<b>XXI</b>
<b>List of Attacks .....</b>	<b>XXVII</b>

<b>1    Introduction to Authentication and Key Establishment .....</b>	<b>1</b>
1.1    Introduction .....	1
1.2    Protocol Architectures .....	2
1.2.1    Cryptographic Keys .....	2
1.2.2    Method of Session Key Generation .....	3
1.2.3    Number of Parties.....	4
1.2.4    Example.....	4
1.3    Cryptographic Tools .....	5
1.3.1    Confidentiality .....	6
1.3.2    Data Origin Authentication and Data Integrity .....	8
1.3.3    Authenticated Encryption .....	9
1.3.4    Non-repudiation .....	9
1.3.5    Examples of Cryptographic Algorithms .....	10
1.3.6    Secret Sharing .....	11
1.3.7    Freshness Mechanisms .....	12
1.4    Adversary Capabilities .....	14
1.4.1    Eavesdropping .....	15
1.4.2    Modification .....	15
1.4.3    Replay .....	16
1.4.4    Preplay .....	16
1.4.5    Reflection .....	16
1.4.6    Denial of Service .....	17
1.4.7    Typing Attacks .....	18
1.4.8    Cryptanalysis .....	20
1.4.9    Certificate Manipulation .....	20
1.4.10    Protocol Interaction .....	22
1.5    Goals for Authentication and Key Establishment .....	22
1.5.1    Models of Security .....	24

1.5.2	Key Establishment or Authentication? . . . . .	24	2.7.1	Models for Group Key Exchange . . . . .	86
1.5.3	Entity Authentication . . . . .	26	2.7.2	Models for Multi-factor Key Exchange . . . . .	87
1.5.4	Key Establishment . . . . .	28	2.8	Secure Channels . . . . .	88
1.5.5	Key Confirmation . . . . .	29	2.8.1	CK01 Secure Channels . . . . .	89
1.5.6	Example: STS Protocol . . . . .	31	2.8.2	CK02 Secure Channels . . . . .	91
1.5.7	Forward Secrecy . . . . .	33	2.8.3	Authenticated and Confidential Channel Establishment (ACCE) Protocols . . . . .	91
1.5.8	Weak Forward Secrecy . . . . .	35	2.9	Conclusion . . . . .	93
1.5.9	Key Compromise Impersonation . . . . .	36	3	<b>Protocols Using Shared Key Cryptography</b> . . . . .	95
1.5.10	Deniability . . . . .	37	3.1	Introduction . . . . .	95
1.5.11	Anonymity . . . . .	39	3.2	Entity Authentication Protocols . . . . .	96
1.5.12	Protocol Efficiency . . . . .	41	3.2.1	Bird–Gopal–Herzberg–Janson–Kutten–Molva–Yung Protocols . . . . .	97
1.6	Tools for Verification of Protocols . . . . .	43	3.2.2	Bellare–Rogaway MAP1 Protocol . . . . .	98
1.6.1	FDR . . . . .	44	3.2.3	ISO/IEC 9798-2 Protocols . . . . .	99
1.6.2	NRL Analyzer and Maude-NPA . . . . .	47	3.2.4	ISO/IEC 9798-4 Protocols . . . . .	101
1.6.3	ProVerif . . . . .	48	3.2.5	Woo–Lam Authentication Protocol . . . . .	102
1.6.4	Scyther and Tamarin . . . . .	48	3.2.6	Comparison of Entity Authentication Protocols . . . . .	103
1.6.5	Tools for Computational Models . . . . .	50	3.3	Server-Less Key Establishment . . . . .	104
1.6.6	Comparison of Tools . . . . .	51	3.3.1	Andrew Secure RPC Protocol . . . . .	104
1.7	Conclusion . . . . .	52	3.3.2	Janson–Tsudik 2PKDP Protocol . . . . .	106
2	<b>Computational Security Models</b> . . . . .	53	3.3.3	Boyd Two-Pass Protocol . . . . .	107
2.1	Introduction . . . . .	53	3.3.4	ISO/IEC 11770-2 Server-Less Protocols . . . . .	108
2.1.1	The Significance of a Computational Proof of Security . . . . .	54	3.3.5	Comparison of Server-Less Protocols . . . . .	110
2.1.2	Elements of Computational Models . . . . .	55	3.4	Server-Based Key Establishment . . . . .	110
2.2	Bellare–Rogaway Model . . . . .	58	3.4.1	Needham–Schroeder Shared Key Protocol . . . . .	111
2.2.1	BR93: The First Computational Model . . . . .	58	3.4.2	Otway–Rees Protocol . . . . .	113
2.2.2	BR95: Server-Based Protocols . . . . .	65	3.4.3	Kerberos Protocol . . . . .	115
2.2.3	The Public Key Setting: The BWM and BWJM Models . . . . .	66	3.4.4	ISO/IEC 11770-2 Server-Based Protocols . . . . .	117
2.2.4	BPR00: Forward Secrecy and Passwords . . . . .	67	3.4.5	Wide-Mouthed-Frog Protocol . . . . .	122
2.2.5	Summarising the BR Model Variants . . . . .	69	3.4.6	Yahalom Protocol . . . . .	122
2.3	Canetti–Krawczyk Model . . . . .	69	3.4.7	Janson–Tsudik 3PKDP Protocol . . . . .	125
2.3.1	BCK98 Model . . . . .	69	3.4.8	Bellare–Rogaway 3PKD Protocol . . . . .	126
2.3.2	CK01 Model . . . . .	70	3.4.9	Woo–Lam Key Transport Protocol . . . . .	126
2.3.3	HMQV Model . . . . .	75	3.4.10	Gong Key Agreement Protocols . . . . .	127
2.4	eCK Model . . . . .	76	3.4.11	Boyd Key Agreement Protocol . . . . .	129
2.4.1	MU08 Model . . . . .	78	3.4.12	Gong Hybrid Protocol . . . . .	129
2.4.2	eCK-PFS Model . . . . .	78	3.4.13	Comparison of Server-Based Protocols . . . . .	130
2.4.3	seCK Model . . . . .	79	3.5	Key Establishment Using Multiple Servers . . . . .	132
2.5	Comparing Computational Models for Key Exchange . . . . .	79	3.5.1	Gong’s Multiple Server Protocol . . . . .	132
2.5.1	Comparing the BR and CK Models . . . . .	80	3.5.2	Chen–Gollmann–Mitchell Protocol . . . . .	133
2.5.2	Comparing eCK and Other Models . . . . .	81	3.6	Conclusion . . . . .	134
2.5.3	Sessions and Session Identifiers . . . . .	82			
2.5.4	Incorporating Public Key Infrastructure . . . . .	83			
2.6	Shoup’s Simulation Model . . . . .	84			
2.7	Models for Enhanced Scenarios . . . . .	85			

<b>4 Authentication and Key Transport Using Public Key Cryptography</b>	135
4.1 Introduction	135
4.1.1 Notation	136
4.1.2 Design Principles for Public Key Protocols	137
4.2 Entity Authentication Protocols	137
4.2.1 Protocols in ISO/IEC 9798-3	138
4.2.2 Protocols in ISO/IEC 9798-5	142
4.2.3 SPICE/AS	142
4.2.4 Comparison of Entity Authentication Protocols	143
4.3 Key Transport Protocols	144
4.3.1 Protocols in ISO/IEC 11770-3	144
4.3.2 Blake-Wilson and Menezes Key Transport Protocol	149
4.3.3 Needham-Schroeder Public Key Protocol	150
4.3.4 Needham-Schroeder Protocol Using Key Server	152
4.3.5 Protocols in the X.509 Standard	153
4.3.6 Public Key Kerberos	155
4.3.7 Beller-Chang-Yacobi Protocols	156
4.3.8 TMN Protocol	160
4.3.9 AKA Protocol	161
4.3.10 Comparison of Key Transport Protocols	163
4.4 Conclusion	164
<b>5 Key Agreement Protocols</b>	165
5.1 Introduction	165
5.1.1 Key Derivation Functions	166
5.1.2 Key Control	167
5.1.3 Unknown Key-Share Attacks	167
5.1.4 Classes of Key Agreement	168
5.1.5 Protocol Compilers for Key Agreement	169
5.2 Diffie-Hellman Key Agreement	169
5.2.1 Small Subgroup Attacks	173
5.2.2 ElGamal Encryption and One-Pass Key Establishment	173
5.2.3 Lim-Lee Protocol Using Static Diffie-Hellman	175
5.3 MTI Protocols	176
5.3.1 Small Subgroup Attack	178
5.3.2 Unknown Key-Share Attacks	179
5.3.3 Lim-Lee Attack	181
5.3.4 Impersonation Attack of Just and Vaudenay	182
5.3.5 Triangle Attacks	182
5.3.6 Yacobi's Protocol	183
5.3.7 Forward Secrecy and Key Compromise Impersonation	184
5.4 Diffee-Hellman-Based Protocols with Basic Message Format	185
5.4.1 KEA Protocol	186
5.4.2 Ateniese-Steiner-Tsudik Protocol	187
5.4.3 Just-Vaudenay-Song-Kim Protocol	188

5.4.4 Unified Model Protocol	190
5.4.5 MQV Protocol	191
5.4.6 HMQV Protocol	193
5.4.7 NAXOS Protocol	196
5.4.8 CMQV Protocol	198
5.4.9 NETS and SMEN	199
5.4.10 Protocol of Kim, Fujioka, and Ustaoglu	201
5.4.11 OAKE Protocol	202
5.4.12 Moriyama-Okamoto Protocols	203
5.4.13 Adding Key Confirmation	204
5.4.14 Comparison of Basic Diffie-Hellman Protocols	205
5.5 Diffie-Hellman Protocols with Explicit Authentication	207
5.5.1 Generic Constructions for Authenticated Diffie-Hellman	208
5.5.2 STS Protocol	209
5.5.3 Oakley Protocol	212
5.5.4 SKEME Protocol	215
5.5.5 Internet Key Exchange	216
5.5.6 SIGMA and Internet Key Exchange V2 (IKEv2)	221
5.5.7 Just Fast Keying	223
5.5.8 Arazi's Protocol	225
5.5.9 Lim-Lee Protocols	226
5.5.10 Hirose-Yoshida Protocol	228
5.5.11 Jeong-Katz-Lee TS3 Protocol	229
5.5.12 YAK Protocol	229
5.5.13 DIKE Protocol	231
5.5.14 Comparison of Authenticated Diffie-Hellman Protocols	232
5.6 Protocols in ISO/IEC 11770-3	233
5.7 Diffie-Hellman Key Agreement in Other Groups	234
5.8 Protocols Based on Encryption or Encapsulation	235
5.8.1 SKEME without Forward Secrecy	236
5.8.2 Boyd-Cliff-González-Nieto-Paterson Protocol	237
5.8.3 Fujioka-Suzuki-Xagawa-Yoneyama Protocol	238
5.8.4 Alawatugoda Protocol	239
5.9 Conclusion	240
<b>6 Transport Layer Security Protocol</b>	241
6.1 Internet Security Protocols	241
6.2 Background on TLS	242
6.3 Protocol Structure	243
6.3.1 Handshake Protocol	244
6.3.2 Record Layer Protocol	249
6.4 Additional Functionality	250
6.4.1 Compression	251
6.4.2 Session Resumption	251
6.4.3 Renegotiation	252

6.5	Variants . . . . .	252	7.3.2	Variants of Smart's Protocol . . . . .	304
6.6	Implementations . . . . .	254	7.3.3	Ryu–Yoon–Yoo Protocol . . . . .	305
6.7	Security Analyses . . . . .	255	7.3.4	Shim's Protocol . . . . .	306
6.7.1	Provable Security . . . . .	255	7.3.5	Scott's Protocol . . . . .	308
6.7.2	Formal Methods . . . . .	257	7.3.6	Chen–Kudla Protocol . . . . .	309
6.8	Attacks: Overview . . . . .	258	7.3.7	Wang's Protocol (IDAK) . . . . .	310
6.9	Attacks: Core Cryptography . . . . .	259	7.3.8	McCullagh–Barreto Protocol . . . . .	311
6.9.1	Bleichenbacher's Attack on PKCS#1v1.5 RSA Key Transport . . . . .	259	7.3.9	Comparison . . . . .	313
6.9.2	Bleichenbacher's Attack on PKCS#1v1.5 RSA Signature Verification . . . . .	262	7.4	Pairing-Based Key Agreement with Explicit Authentication . . . . .	315
6.9.3	Weaknesses in DES, Triple-DES, MD5, and SHA-1 . . . . .	263	7.4.1	Boyd–Mao–Paterson Protocol . . . . .	315
6.9.4	RC4 Biases . . . . .	264	7.4.2	Asymmetric Protocol of Choi <i>et al.</i> . . . . .	316
6.9.5	Weak RSA and Diffie–Hellman: FREAK and Logjam Attacks . . . . .	266	7.4.3	Identity-Based Key Agreement without Random Oracles . . . . .	317
6.10	Attacks: Crypto Usage in Ciphersuites . . . . .	268	7.4.4	Comparison . . . . .	318
6.10.1	BEAST Adaptive Chosen Plaintext Attack and POODLE . . . . .	268	7.5	Identity-Based Protocols with Additional Properties . . . . .	319
6.10.2	Cross-Protocol Attack on Diffie–Hellman Parameters . . . . .	271	7.5.1	Using Multiple KGCs . . . . .	319
6.10.3	Lucky 13 Attack on MAC-Then-Encode-Then-Encrypt . . . . .	272	7.5.2	Girault's Three Levels . . . . .	321
6.11	Attacks: Protocol Functionality . . . . .	273	7.5.3	Certificateless Key Agreement . . . . .	324
6.11.1	Downgrade Attacks . . . . .	273	7.5.4	Protocols with Generalised Policies . . . . .	325
6.11.2	Renegotiation Attack . . . . .	274	7.5.5	One-Pass Identity-Based Protocols . . . . .	325
6.11.3	Compression-Related Attacks: CRIME, BREACH . . . . .	277	7.6	Conclusion . . . . .	327
6.11.4	Termination Attack . . . . .	278			
6.11.5	Triple Handshake Attack . . . . .	279			
6.12	Attacks: Implementations . . . . .	280			
6.12.1	Side Channel Attacks . . . . .	280			
6.12.2	TLS-Specific Implementation Flaws . . . . .	281			
6.12.3	Certificate Validation . . . . .	281			
6.12.4	Bad Random Number Generators . . . . .	282			
6.13	Attacks: Other . . . . .	283			
6.13.1	Application-Level Protocols . . . . .	283			
6.13.2	Certificate Authority Breaches and Related Flaws . . . . .	284			
6.14	TLS Version 1.3 . . . . .	285			
<b>7</b>	<b>Identity-Based Key Agreement . . . . .</b>	<b>289</b>			
7.1	Introduction . . . . .	289			
7.1.1	Security Model for Identity-Based Cryptosystems . . . . .	290			
7.1.2	Elliptic Curve Pairings . . . . .	291			
7.1.3	Sakai–Ohgishi–Kashahara Protocol . . . . .	293			
7.2	Identity-Based Protocols without Pairings . . . . .	294			
7.2.1	Okamoto's Scheme . . . . .	295			
7.2.2	Günther's Scheme . . . . .	297			
7.2.3	Fiore–Gennaro Scheme . . . . .	299			
7.2.4	Comparison . . . . .	301			
7.3	Pairing-Based Key Agreement with Basic Message Format . . . . .	302			
7.3.1	Smart's Protocol . . . . .	303			
8	<b>Password-Based Protocols . . . . .</b>	<b>329</b>			
8.1	Introduction . . . . .	329			
8.2	Encrypted Key Exchange Using Diffie–Hellman . . . . .	332			
8.2.1	Bellovin and Merritt's Original EKE . . . . .	332			
8.2.2	Augmented EKE . . . . .	335			
8.3	Two-Party PAKE Protocols . . . . .	337			
8.3.1	PAK . . . . .	337			
8.3.2	SPEKE . . . . .	340			
8.3.3	Dragonfly Protocol . . . . .	342			
8.3.4	SPAKE . . . . .	343			
8.3.5	J-PAKE . . . . .	345			
8.3.6	Katz–Ostrovsky–Yung Protocol . . . . .	347			
8.3.7	Protocol of Jiang and Gong . . . . .	347			
8.3.8	Protocols Using Smooth Projective Hashing . . . . .	348			
8.3.9	Protocols Using a Server Public Key . . . . .	351			
8.3.10	Comparing Two-Party PAKE Protocols . . . . .	354			
8.4	Two-Party Augmented PAKE Protocols . . . . .	356			
8.4.1	PAK-X, PAK-Y and PAK-Z . . . . .	357			
8.4.2	B-SPEKE . . . . .	357			
8.4.3	SRP . . . . .	359			
8.4.4	AMP . . . . .	362			
8.4.5	AugPAKE Protocol . . . . .	363			
8.4.6	Using Multiple Servers . . . . .	364			
8.4.7	Comparing Two-Party Augmented PAKE Protocols . . . . .	365			

8.5 RSA-Based Protocols . . . . .	365	9.4.1 Koyama and Ohta Protocols . . . . .	424
8.5.1 RSA-Based EKE . . . . .	366	9.4.2 Protocols of Saeednia and Safavi-Naini . . . . .	427
8.5.2 OKE and SNAPI . . . . .	367	9.4.3 ID-Based Group Key Agreement and Pairings . . . . .	428
8.6 Three-Party PAKE Protocols . . . . .	369	9.5 Group Key Agreement without Diffie–Hellman . . . . .	429
8.6.1 GLNS Secret Public Key Protocols . . . . .	369	9.5.1 Pieprzyk and Li's Key Agreement Protocol . . . . .	429
8.6.2 Steiner, Tsudik and Waidner Three-Party EKE . . . . .	373	9.5.2 Tzeng–Tzeng Protocols . . . . .	430
8.6.3 GLNS Protocols with Server Public Keys . . . . .	375	9.5.3 Boyd–González Nieto Group Key Agreement . . . . .	432
8.6.4 Three-Party Protocol of Yen and Liu . . . . .	376	9.5.4 Generic One-Round Group Key Agreement from Multi-KEM . . . . .	433
8.6.5 Generic Protocol of Abdalla, Fouque and Poincheval . . . . .	377	9.5.5 Asymmetric Group Key Agreement . . . . .	434
8.6.6 Stronger Security Models for Three-Party PAKE . . . . .	378	9.6 Group Key Transport Protocols . . . . .	434
8.6.7 Three-Party Protocol of Yoneyama . . . . .	379	9.6.1 Burmester–Desmedt Star and Tree Protocols . . . . .	434
8.6.8 Cross-Realm PAKE Protocols . . . . .	380	9.6.2 Mayer and Yung's Protocols . . . . .	437
8.6.9 Comparing Three-Party PAKE Protocols . . . . .	383	9.6.3 Key Hierarchies . . . . .	439
8.7 Group PAKE Protocols . . . . .	383	9.7 Conclusion . . . . .	440
8.7.1 Concrete Protocol Constructions . . . . .	384		
8.7.2 Generic Constructions . . . . .	386		
8.8 Conclusion . . . . .	387		
<b>9 Group Key Establishment . . . . .</b>	<b>389</b>		
9.1 Introduction . . . . .	389	<b>A Standards for Authentication and Key Establishment . . . . .</b>	<b>441</b>
9.1.1 Efficiency in Group Key Establishment . . . . .	390	A.1 ISO Standards . . . . .	441
9.1.2 Generalised Security Goals . . . . .	390	A.1.1 ISO/IEC 9798 . . . . .	441
9.1.3 Static and Dynamic Groups . . . . .	392	A.1.2 ISO/IEC 11770 . . . . .	442
9.1.4 Insider Attacks . . . . .	393	A.1.3 ISO 9594-8/ITU X.509 . . . . .	443
9.1.5 Notation . . . . .	394	A.2 IETF Standards . . . . .	443
9.2 Generalising Diffie–Hellman Key Agreement . . . . .	394	A.3 IEEE P1363 Standards . . . . .	444
9.2.1 Ingemarsson–Tang–Wong Key Agreement . . . . .	395	A.4 NIST Standards . . . . .	444
9.2.2 Steiner–Tsudik–Waidner Key Agreement . . . . .	396	A.5 Other Standards and Protocols . . . . .	446
9.2.3 Steer–Strawczynski–Diffie–Wiener Key Agreement . . . . .	399	A.5.1 ANSI . . . . .	446
9.2.4 Kim–Perrig–Tsudik Tree Diffie–Hellman . . . . .	400	A.5.2 Widely Deployed Protocols . . . . .	447
9.2.5 Becker and Wille's Octopus Protocol . . . . .	402		
9.2.6 Burmester–Desmedt Key Agreement . . . . .	404		
9.2.7 One-Round Tripartite and Multi-Party Diffie–Hellman . . . . .	407	<b>B Tutorial: Building a Key Establishment Protocol . . . . .</b>	<b>449</b>
9.2.8 Security of Generalised Diffie–Hellman . . . . .	407	B.1 Confidentiality . . . . .	451
9.2.9 Efficiency of Generalised Diffie–Hellman . . . . .	408	B.2 Authentication . . . . .	453
9.3 Group Key Agreement Protocols . . . . .	410	B.3 Replay . . . . .	455
9.3.1 Authenticating Generalised Diffie–Hellman . . . . .	410	B.4 Design Principles for Cryptographic Protocols . . . . .	459
9.3.2 Klein–Otten–Beth Protocol . . . . .	411		
9.3.3 Authenticated GDH Protocols . . . . .	412	<b>C Summary of Notation . . . . .</b>	<b>461</b>
9.3.4 Authenticated Tree Diffie–Hellman . . . . .	416		
9.3.5 Katz–Yung Compiler . . . . .	416	<b>References . . . . .</b>	<b>463</b>
9.3.6 Protocol of Bohli, Gonzalez Vasco and Steinwandt . . . . .	419		
9.3.7 Authenticated Tripartite Diffie–Hellman . . . . .	421	<b>General Index . . . . .</b>	<b>513</b>
9.3.8 Comparing Authenticated Group Diffie–Hellman . . . . .	422		
9.4 Identity-Based Group Key Establishment Protocols . . . . .	423	<b>Protocol Index . . . . .</b>	<b>519</b>
