

CONTENT

1	Haemathology.....	7
1.1	Collection of blood for haematologic and other examinations	9
1.2	Photometric determination of hemoglobin content in the blood	10
1.3	Determination of erythrocyte sedimentation rate (ESR)	11
1.4	Determination of haematocrit (or packed cell volume)	12
1.5	Determination of the number of blood elements in peripheral blood – RBC	13
1.6	Reticulocyte count	15
1.7	Determination of the number of WBC in peripheral blood.....	16
1.8	Determination of the number of thrombocytes in peripheral blood.....	17
1.9	Differential leucocyte count.....	18
1.10	Determination of the blood groups – AB0 system	19
1.11	Determination of Rh group.....	21
1.12	Blood compatibility tests	22
1.13	Determination of the bleeding time according to Ivy.....	23
1.14	Rumpel-Leed's test	24
1.15	Activated partial thromboplastin time (APTT).....	25
1.16	Prothrombin time (PT) – Quick's test	26
2	Sensory Physiology	27
2.1	Determination of near and far points of the eye	29
2.2	Determination of visual acuity	30
2.3	Examination of colour vision.....	31
2.4	Direct ophtalmoscopy	32
2.5	Perimetry.....	33
2.6	Hearing test by using tuning forks.....	34
3	Cardiovascular Physiology	35
3.1	Electrocardiogram	37
3.2	Determination of blood pressure by the auscultatory and palpation methods	39
3.3	Palpation – method for pulse examination	41
3.4	Functional tests of cardiovascular system	43
4	Respiratory Physiology	49
4.1	Determination of forced vital capacity (FVC) and forced expiratory volume (FEV ₁)... ..	51
4.2	Determination of maximal voluntary ventilation (MVV)	52
4.3	Nomograms and voluntary apnoea.....	53
5	Renal Physiology	55
5.1	Urine analysis.....	57
5.2	Kidney functional tests.....	60
6	Reflexes	63
6.1	Reflex arc	65
7	Metabolism	68
7.1	Metabolism	71
