## **7. Sustainable Towns: The Case of Frederikshavn Aiming at 100% Renewable Energy**

*Henrik Lund, Poul A. Østergaard*

<b>Introduction</b>	129
<b>Definition of Renewable Energy</b>	130
<b>Definition of Project Area</b>	130
<b>Development Phases</b>	131

The Present Situation: Year 2007, Approximately 20% Renewable Energy	132
The First Step: Frederikshavn in the Year 2009	135
Frederikshavn in the Year of 2015	136
New Waste Incineration Combined Heat And Power Plant	137
Expansion of District Heating Grid	138
Transport	139
Biogas Plant and Methanol Production	139
Geothermal and Heat Pumps	140
Combined Heat and Power Plants and Boilers	140
Wind Power	141
Energy System Analysis	141
Phase 3: Frederikshavn in the Year 2030—100% Renewable Energy and Less Biomass	144
 8. Life Cycle Analysis Versus Cost Benefit of Renewable Energy: Solar Systems Photovoltaics in Public Private Partnerships	
<i>Tom Pastore</i>	
Introduction	147
Energy Challenges are Enormous	148
SolarCity—Solar PV Array Installations on City Facilities	148
Due Diligence Procedures	148
Life Cycle Analysis of a PV System From a Financial Perspective	149
Available Incentives	149
Power Purchase Agreement Business Model	151
Calculating Utility Rates	151
Financial Analyses	152
Consideration of Externalities	156
Conclusion	157
Reference	157
