Preface to the fifth edition ix

Preface to the first edition xi

Acknowledgements xiii

Glossary of symbols xv

1 Introduction 1

1.1 Analytical problems 1
1.2 Errors in quantitative analysis 2
1.3 Types of error 3
1.4 Random and systematic errors in titrimetric analysis 6
1.5 Handling systematic errors 9
1.6 Planning and design of experiments 12
1.7 Calculators and computers in statistical calculations 13
Bibliography 15
Exercises 16

2 Statistics of repeated measurements 18

2.1 Mean and standard deviation 18
2.2 The distribution of repeated measurements 20
2.3 Log-normal distribution 24
2.4 Definition of a 'sample' 24
2.5 The sampling distribution of the mean 26
2.6 Confidence limits of the mean for large samples 27
2.7 Confidence limits of the mean for small samples 28
2.8 Presentation of results 29
2.9 Other uses of confidence limits 31
2.10 Confidence limits of the geometric mean for a log-normal distribution 31
2.11 Propagation of random errors 32
2.12 Propagation of systematic errors 35
Bibliography 37
Exercises 37

3 Significance tests 39

3.1 Introduction 39
3.2 Comparison of an experimental mean with a known value 39
3.3 Comparison of two experimental means 41
3.4 Paired *t*-test 45
3.5 One-sided and two-sided tests 47
3.6 *F*-test for the comparison of standard deviations 49
3.7 Outliers 51
3.8 Analysis of variance 54
3.9 Comparison of several means 55
3.10 The arithmetic of ANOVA calculations 58
3.11 The chi-squared test 61
3.12 Testing for normality of distribution 63
3.13 Conclusions from significance tests 67
Bibliography 69
Exercises 69

4 The quality of analytical measurements 74

4.1 Introduction 74
4.2 Sampling 74
4.3 Separation and estimation of variances using ANOVA 76
4.4 Sampling strategy 77
4.5 Quality control methods – Introduction 78
4.6 Shewhart charts for mean values 79
4.7 Shewhart charts for ranges 81
4.8 Establishing the process capability 83
4.9 Average run length: cusum charts 86
4.10 Zone control charts (J-charts) 89
4.11 Proficiency testing schemes 90
4.12 Collaborative trials 93
4.13 Uncertainty 98
4.14 Acceptance sampling 102
Bibliography 103
Exercises 104

5 Calibration methods: regression and correlation 107

5.1 Introduction: instrumental analysis 107
5.2 Calibration graphs in instrumental analysis 108
5.3 The product–moment correlation coefficient 110
5.4 The line of regression of y on x 114
5.5 Errors in the slope and intercept of the regression line 115
5.6 Calculation of a concentration and its random error 118
5.7 Limits of detection 121
5.8 The method of standard additions 124
5.9 Use of regression lines for comparing analytical methods 126
5.10 Weighted regression lines 131
5.11 Intersection of two straight lines 135

5.12 ANOVA and regression calculations 136
5.13 Curvilinear regression methods – Introduction 138
5.14 Curve fitting 141
5.15 Outliers in regression 145
Bibliography 146
Exercises 147

6 Non-parametric and robust methods 150

6.1 Introduction 150
6.2 The median: initial data analysis 151
6.3 The sign test 156
6.4 The Wald–Wolfowitz runs test 158
6.5 The Wilcoxon signed rank test 159
6.6 Simple tests for two independent samples 162
6.7 Non-parametric tests for more than two samples 165
6.8 Rank correlation 167
6.9 Non-parametric regression methods 169
6.10 Robust methods – Introduction 171
6.11 Robust estimates of location and spread 173
6.12 Robust regression methods 175
6.13 Re-sampling statistics 176
6.14 Conclusions 178
Bibliography 179
Exercises 179

7 Experimental design and optimization 181

7.1 Introduction 181
7.2 Randomization and blocking 182
7.3 Two-way ANOVA 183
7.4 Latin squares and other designs 186
7.5 Interactions 187
7.6 Factorial versus one-at-a-time design 192
7.7 Factorial design and optimization 193
7.8 Optimization: basic principles and univariate methods 197
7.9 Optimization using the alternating variable search method 200
7.10 The method of steepest ascent 202
7.11 Simplex optimization 205
7.12 Simulated annealing 209
Bibliography 209
Exercises 210

8 Multivariate analysis 213

8.1 Introduction 213
8.2 Initial analysis 214
8.3 Principal component analysis 215
8.4 Cluster analysis 220
8.5 Discriminant analysis 223

8.6 *K*-nearest neighbour method 227
8.7 Disjoint class modelling 228
8.8 Regression methods 228
8.9 Multiple linear regression (MLR) 229
8.10 Principal components regression (PCR) 232
8.11 Partial least squares (PLS) regression 234
8.12 Artificial neural networks 236
8.13 Conclusions 237
Bibliography 238
Exercises 239

Solutions to exercises 241

Appendix 1: Commonly used statistical significance tests 251

Appendix 2: Statistical tables 254

Index 263

Supporting resources

Visit **www.pearsoned.co.uk/miller** to find valuable online resources

For instructors

- Complete, downloadable Instructor's Manual
- PowerPoint slides that can be downloaded and used as OHTs

For more information please contact your local Pearson Education sales representative or visit **www.pearsoned.co.uk/miller**
