

Brief Contents

Part I Foundations of Conservation Biology 1

- 1 The State of Our Planet 3
- 2 The Rise of Conservation Biology 25
- 3 Biodiversity Concepts and Measurement 53
- 4 Global Patterns and Drivers of Biodiversity 81

Part II Importance of Biodiversity 115

- 5 The Many Values of Biodiversity 117
- 6 Biodiversity and Ecosystem Services 141
- 7 Ecological Economics 181

Part III Threats to Biodiversity 213

- 8 Extinction 215
- 9 Habitat Loss, Fragmentation, and Degradation 249
- 10 Overexploitation 293
- 11 Invasive Alien Species 329
- 12 Climate Change 369

Part IV Approaches to Conservation 403

- 13 Species-Level Conservation 405
- 14 Community and Ecosystem Conservation 445
- 15 Landscape-Scale Conservation 477
- 16 Ex Situ Conservation 521
- 17 Conservation and Sustainable Development 555
