

Content and summary		Pages
Message to readers		5
Content and structure		7
Introduction		13
PART 1		
Chapter 1. Problems with parameters		27
1.1. Solving problems with parameters		
1.2. Simple examples		
1.3. More complicated examples		
1.4. Inequalities with parameters		
1.5. Word problems with parameters		
Chapter 2. Number theory. Basic notions and their applications		49
2.1. Algebraic expressions. Basic Information		
2.2. Divisibility properties		
2.3. Division with remainder		
2.4. Fundamental theorem of arithmetic and its applications		
2.5. Euclidian algorithm		
2.6. Linear equations with two integer variables		
2.7. Non-linear Diophantine equations with two variables		
2.8. Additional problems		
Chapter 3. Introduction to logic and proofs		109
3.1. Mathematical Logic		
3.2. Statements		
3.3. Logical operators		
3.4. Proofs.		
3.5. Existence and uniqueness proofs		
3.6. Logical quantifiers.		
3.7. Sequence limit		
3.8. Rational and irrational numbers		
3.9. Set closed under operations		
Chapter 4. Elements of set theory		148
4.1. Sets and subsets		
4.2. Basic operations on sets		
4.3. Set Identities		
4.4. Exercises		

- 4.5. Connection between set operations and systems of equations and inequalities
- 4.6. Key-curve method for solving two-variable inequalities
- 4.7. Inclusion-Exclusion method
- 4.8. Euler's function ϕ
- 4.9. Cardinality of sets
- 4.10. Comparing infinite sets.
- 4.11. Algebraic numbers
- 4.12. Uncountable sets

Chapter 5. Functions and equations. Main definitions and properties

197

- 5.1. Functions. Main definitions
- 5.2. Functions with special properties
- 5.3. Operations on functions
- 5.4. Equations. Definitions, properties and transformations
- 5.5. Monotone continuous functions and their properties
- 5.6. Odd and even functions
- 5.7 Symmetry in graphs of functions
- 5.8. Integer and fractional parts of real number
- 5.9. Functions with absolute values

Chapter 6. Linear and quadratic equations with parameters

249

- 6.1. Linear equations
- 6.2. Quadratic equations
- 6.3. Various problems with quadratic functions
- 6.4. Equations with absolute value

PART 2

Chapter 7. Polynomials

- 7.1. Polynomials
- 7.2. Polynomial division
- 7.3. Factorizing the difference of powers and its application
- 7.4. Monic polynomials with integer coefficients. Finding integer roots.
- 7.5. Polynomials with integer coefficients.
- 7.6. Method of undefined coefficients.
- 7.7. Ferrari's method of solving a quartic equation
- 7.8. Reciprocal polynomials
- 7.9. Generalization of reciprocal polynomials

- 7.10. Change of variable
- 7.11. Polynomial in two variables. Homogeneous polynomials
- 7.12. Symmetric polynomials

Chapter 8. Inequalities. Main definitions and properties

- 8.1. Numerical inequalities
- 8.2. Inequalities with variables
- 8.3. Rational inequalities. Method of intervals (the key-number method)
- 8.4. Exercises

Chapter 9. Inequalities with parameters

- 9.1. Linear inequalities
- 9.2. Quadratic inequalities
- 9.3. Inequalities with absolute values
- 9.4. Exercises

Chapter 10. Inequalities of Averages and their applications

- 10.1. The mean inequalities in two variables
- 10.2. The mean inequalities in three variables
- 10.3. The mean inequalities in many variables
- 10.4. Exercises
- 10.5. Appendix 1. Proof of the AGM inequality.
- 10.6. Appendix 2. Proof of the Arithmetic-Quadratic inequality.
- 10.7. Appendix 3. Proof of the Cauchy–Schwarz Inequality

Chapter 11. Mathematical induction

- 11.1. Principle of Induction
- 11.2. Proving identities
- 11.3. Proving inequalities
- 11.4. Linear recurrence equations
- 11.5. Fundamental theorem of arithmetic and its applications
- 11.6. Divisibility problems

PART 3

Chapter 12. Systems with parameters.

Chapter 13. Equations with radicals and parameters.

Chapter 14. Inequalities with radicals and parameters

Chapter 15. Trigonometric problems with parameters

Chapter 16. Exponential and logarithmic equations with parameters

Chapter 17. Exponential and logarithmic inequalities with parameters
