

Contents

Introduction	ix
1. Time Series and Their Features	1
Autocorrelation and Periodic Movements	2
Seasonality	4
Stationarity and Nonstationarity	4
Trends	6
Volatility	8
Common Features	9
Time Series Having Natural Constraints	10
Endnotes	12
2. Transforming Time Series	13
Distributional Transformations	13
Stationarity Inducing Transformations	20
Decomposing a Time Series and Smoothing Transformations	23
Endnotes	30
3. ARMA Models for Stationary Time Series	31
Stochastic Processes and Stationarity	31
Wold's Decomposition and Autocorrelation	33
First-Order Autoregressive Processes	35
First-Order Moving Average Processes	36
General AR and MA Processes	37
Autoregressive-Moving Average Models	43
ARMA Model Building and Estimation	46
Endnotes	55
4. ARIMA Models for Nonstationary Time Series	57
Nonstationarity	57
ARIMA Processes	60
ARIMA Modeling	65
Endnotes	68

5.	Unit Roots, Difference and Trend Stationarity, and Fractional Differencing	71
	Determining the Order of Integration of a Time Series	71
	Testing for a Unit Root	73
	Trend Versus Difference Stationarity	77
	Testing for More Than One Unit Root	81
	Other Approaches to Testing for a Unit Root	83
	Estimating Trends Robustly	87
	Fractional Differencing and Long Memory	90
	Testing for Fractional Differencing	93
	Estimating the Fractional Differencing Parameter	96
	Endnotes	101
6.	Breaking and Nonlinear Trends	103
	Breaking Trend Models	103
	Breaking Trends and Unit Root Tests	105
	Unit Roots Tests When the Break Date Is Unknown	110
	Robust Tests for a Breaking Trend	111
	Confidence Intervals for the Break Date and Multiple Breaks	112
	Nonlinear Trends	112
	Endnotes	119
7.	An Introduction to Forecasting With Univariate Models	121
	Forecasting With Autoregressive-Integrated-Moving Average (ARIMA) Models	121
	Forecasting a Trend Stationary Process	128
	Endnotes	130
8.	Unobserved Component Models, Signal Extraction, and Filters	131
	Unobserved Component Models	131
	Signal Extraction	136
	Filters	139
	Endnotes	144
9.	Seasonality and Exponential Smoothing	145
	Seasonal Patterns in Time Series	145
	Modeling Deterministic Seasonality	145
	Modeling Stochastic Seasonality	147
	Mixed Seasonal Models	152
	Seasonal Adjustment	153
	Exponential Smoothing	153
	Endnotes	159

10. Volatility and Generalized Autoregressive Conditional Heteroskedastic Processes	161
Volatility	161
Autoregressive Conditional Heteroskedastic Processes	163
Testing for the Presence of ARCH Errors	165
Forecasting From an ARMA-GARCH Model	168
Endnotes	171
11. Nonlinear Stochastic Processes	173
Martingales, Random Walks, and Nonlinearity	173
Nonlinear Stochastic Models	176
Bilinear Models	177
Threshold and Smooth Transition Autoregressions	181
Markov-Switching Models	185
Neural Networks	188
Nonlinear Dynamics and Chaos	189
Testing for Nonlinearity	192
Forecasting With Nonlinear Models	198
Endnotes	199
12. Transfer Functions and Autoregressive Distributed Lag Modeling	201
Transfer Function-Noise Models	201
Autoregressive Distributed Lag Models	203
Endnotes	210
13. Vector Autoregressions and Granger Causality	211
Multivariate Dynamic Regression Models	211
Vector Autoregressions	212
Granger Causality	213
Determining the Lag Order of a Vector Autoregression	213
Variance Decompositions and Innovation Accounting	216
Structural Vector Autoregressions	222
Endnotes	230
14. Error Correction, Spurious Regressions, and Cointegration	233
The Error Correction Form of an Autoregressive Distributed Lag Model	233
Spurious Regressions	234
Error Correction and Cointegration	242
Testing for Cointegration	247
Estimating Cointegrating Regressions	250
Endnotes	253

15. Vector Autoregressions With Integrated Variables, Vector Error Correction Models, and Common Trends	255
Vector Autoregressions With Integrated Variables	255
Vector Autoregressions With Cointegrated Variables	257
Estimation of Vector Error Correction Models and Tests of Cointegrating Rank	260
Identification of Vector Error Correction Models	264
Structural Vector Error Correction Models	266
Causality Testing in Vector Error Correction Models	268
Impulse Response Asymptotics in Nonstationary VARs	269
Vector Error Correction Model-X Models	271
Common Trends and Cycles	274
Endnotes	279
16. Compositional and Count Time Series	281
Constrained Time Series	281
Modeling Compositional Data	281
Forecasting Compositional Time Series	283
Time Series Models for Counts: The IN-AR(1) Benchmark Model	288
Other Integer-Valued ARMA Processes	289
Estimation of Integer-Valued ARMA Models	290
Testing for Serial Dependence in Count Time Series	291
Forecasting Counts	293
Intermittent and Nonnegative Time Series	296
Endnotes	296
17. State Space Models	299
Formulating State Space Models	299
The Kalman Filter	303
ML Estimation and the Prediction Error Decomposition	305
Prediction and Smoothing	307
Multivariate State Space Models	308
Endnotes	309
18. Some Concluding Remarks	311
Endnotes	313
References	315
Index	329
