
UNIVERSITY OF ARKANSAS LECTURE NOTES IN THE MATHEMATICAL SCIENCES

The first five volumes of this Series were published by the University of Arkansas. This volume (Number 6) and subsequent volumes will be published by Wiley-Interscience. We anticipate one new volume in the Series each year, covering a wide range of topics in the mathematical sciences.

Other Series in Mathematics from Wiley-Interscience:

Pure & Applied Mathematics: A Wiley-Interscience Series of Texts, Monographs, and Tracts

Richard Courant, Founder

Lipman Bers, Peter Hilton, and Harry Hochstadt, Advisory Editors

Wiley-Interscience Series in Discrete Mathematics

Ronald Graham and Jan Karel Lenstra, Advisory Editors

Canadian Mathematical Society Series of Monographs and Advanced Texts

Editorial Board: Frederick V. Atkinson, Bernhard Banaschewski, Colin Clark, Erwin O. Kreyszig (Chairman), and John B. Walsh.

Contents

Chapter 1. Introduction

1.1	Scope	1
1.2	Data and Distributions on a Circle	4
1.3	Data and Distributions on a Sphere	14

Chapter 2. The Uniform Distribution on Ω_q

2.1	Introduction	40
2.2	The Distribution of $X = x_1 + \dots + x_n$	44
2.3	The Distribution of $M_n = (x_1 x_1' + \dots + x_n x_n')/n$	55
2.4	The Joint Distribution of the Eigen Values of M_n	61
2.5	Testing Whether f is Uniform	64
2.6	Computer Simulation of $U(\Omega_q)$	68
2.7	High Dimensional Spheres	71

Chapter 3. Classes of Distributions on Ω_q

3.1	Introduction	76
3.2	Exponential Models and Spherical Harmonics	80
3.3	Some Characterizations	89
3.4	Rotationally Symmetric Distributions	92
3.5	Distributions Arising from Diffusion	98
3.6	Other Methods	108
3.7	Arithmetic and Graphical Comparisons of Distributions	111

Chapter 4. Statistical Methods Based on the Center of Mass of the Sample

4.1	Introduction	135
4.2	Basic Theory	136
4.3	General Several Sample Tests	144
4.4	The Langevin Distribution with Large Samples	151
4.5	Concentrated Langevin Distributions	157

Chapter 5. Statistical Methods Based on the Moment of Inertia of the Sample

5.1	Introduction	166
5.2	Preliminary Results	170
5.3	Inferences from one Sample	176
5.4	Inferences from Several Samples	179
5.5	The Generalized Scheiddegger-Watson Distribution	183
5.6	Application to the Langevin Distribution	185

Appendix A Normalization Constants

A1	Introduction	187
A2	The Functions $a_q(\kappa)$, $A_q(\kappa)$ and its Inverse	190
A3	The Functions $b_q(\kappa)$, $B_q(\kappa)$ and its Inverse	196
A4	The Computation of $A_q(\kappa)$, $B_q(\kappa)$ and Associated Functions	201
A5	Use of the Kummer Function	205

Appendix B Asymptotic Spectral Analysis of Cross-Product Matrices

B1	Introduction	209
B2	The Key to Kato	210
B3	Large Sample Theory of Symmetric Cross-Product Matrices	216
B4	Direct Approach to Large Sample Theory of Cross-Product Matrices	221

<u>Appendix C</u>	<u>A Series Expansion for the Angular Gaussian Distribution</u>	226
	(Written by Christopher Bingham)
