

Contents

10 Principles of Safety of Work In Chemical Laboratory	3
Formation and Characteristics of the Most Important Acids	4
Formation and Characteristics of the Most Important Bases. Amphoterity.	6
Neutralization and Hydrolysis	9
Oxidation and Reduction, Redox Equations	11
Lime, Plaster	13
Cement, Hydraulic Lime, Concrete	15
Other Building Materials	17
Water in the Building Industry	19
Water in Consumption and Environment	22
Metals	24
Raw Materials for Production of Plastics	27
Exercises	29
Stoichiometric Calculations	29
Avogadro's Law - Calculations of Gas Volumes	31
Calculations of Concentrations of Solutions, Preparation of Solutions.	32
General Formula for Mixing Liquid, event. Solid Materials.	32
Neutralization	34
Chemical Nomenclature	35
Trivial Names	35
Systematic Inorganic Nomenclature	35
Cations	35
Anions	36
Acids	37
Salts	38
Oxides	39
Hydroxides	40
Basic Nomenclature of Organic Compounds	40
Hydrocarbons	40
Derivatives of Hydrocarbons	42
The Most Often Used Elements	43
English - Czech Chemical Vocabulary	44
