Introduction	3
I. Functions of Several Real Variables (<i>Stanislav Kračmar</i>)	
I.1. Euclidean space \mathbf{E}_n	4
I.2. Real functions of several real variables	8
I.3. Limits and continuity	11
I.4. Partial derivatives, differentials	15
I.5. Gradients, directional derivatives	21
I.6. Implicit functions	24
I.7. Local extremes	27
I.8. Exercises	31
II. Riemann Integral of a Function of One Variable (<i>Jiří Neustupa</i>)	
II.1. Motivation and definition of the Riemann integral	34
II.2. Integrability (existence of the Riemann integral) – sufficient conditions ...	37
II.3. Important properties of the Riemann integral	38
II.4. Evaluation of the Riemann integral	40
II.5. Numerical integration	42
II.6. Improper Riemann integral	44
II.7. Historical remark	45
II.8. Exercises	46
III. Riemann Integral of a Function of Two and Three Variables (<i>Jiří Neustupa</i>)	
III.1. The double integral – motivation and definition. The two-dimensional Jordan measure and measurable sets in \mathbf{E}_2	48
III.2. Existence and important properties of the double integral	51
III.3. Evaluation of the double integral – Fubini's theorem and transformation to the polar coordinates	52
III.4. Some physical applications of the double integral	56
III.5. The volume integral – motivation and definition. The three-dimensional Jordan measure and measurable sets in \mathbf{E}_3	56
III.6. Existence and important properties of the volume integral	59
III.7. Evaluation of the volume integral – Fubini's theorem and transformation to the cylindrical and to the spherical coordinates	59
III.8. Some physical applications of the volume integral	65
III.9. A remark to the method of substitution in the double and in the volume integral	65

III.10. Exercises	67
IV. Line Integrals (<i>Jiří Neustupa</i>)	
IV.1. Simple curves	70
IV.2. The line integral of a scalar function	73
IV.3. Some physical applications of the line integral of a scalar function	76
IV.4. The line integral of a vector function	77
IV.5. Green's theorem	80
IV.6. Exercises	82
V. Surface Integrals (<i>Jiří Neustupa</i>)	
V.1. Simple surfaces	85
V.2. The surface integral of a scalar function	90
V.3. Some physical applications of the surface integral of a scalar function	94
V.4. The surface integral of a vector function	95
V.5. Operators div and curl	98
V.6. The Gauss Ostrogradsky theorem and the Stokes theorem	99
V.7. Exercises	102
VI. Potential and Solenoidal Vector Field (<i>Jiří Neustupa</i>)	
VI.1. Independence of the line integral of a vector function on the path. Potential vector field	105
VI.3. How to find a potential	112
VI.4. Solenoidal vector field	115
VI.5. Exercises	117
Bibliography	118
