1	Differentiable Manifolds	1
1.1	Some Definitions and Theorems on Differentiable Manifolds	2
1.2	C^∞ Manifolds	8
1.3	Differentiable Structures Defined on Sets	20
1.4	Differentiable Functions and Mappings	29
1.5	Critical Points and Values	33
1.6	Immersions, Submanifolds, Embeddings and Diffeomorphisms	36
1.7	Constructing Manifolds by Inverse Image. Implicit Map Theorem	53
1.8	Submersions. Quotient Manifolds	57
1.9	The Tangent Bundle	67
1.10	Vector Fields	70
1.10.1	Integral Curves	76
1.10.2	Flows	80
1.10.3	Transforming Vector Fields	82
	References	87
	Further Reading	87
2	Tensor Fields and Differential Forms	89
2.1	Some Definitions and Theorems on Tensor Fields and Differential Forms	91
2.2	Vector Bundles	94
2.3	Tensor and Exterior Algebras. Tensor Fields	101
2.4	Differential Forms. Exterior Product	103
2.5	Lie Derivative. Interior Product	113
2.6	Distributions and Integral Manifolds. Frobenius Theorem. Differential Ideals	115
	References	128
	Further Reading	128
3	Integration on Manifolds	129
3.1	Some Definitions and Theorems on Integration on Manifolds	130

3.2	Orientable Manifolds. Orientation-Preserving Maps	132
3.3	Integration on Chains. Stokes' Theorem I	135
3.4	Integration on Oriented Manifolds. Stokes' Theorem II	137
3.5	De Rham Cohomology	141
	References	147
	Further Reading	147
4	Lie Groups	149
4.1	Some Definitions and Theorems on Lie Groups	151
4.2	Lie Groups and Lie Algebras	164
4.3	Homomorphisms of Lie Groups and Lie Algebras	177
4.4	Lie Subgroups and Lie Subalgebras	182
4.5	The Exponential Map	190
4.6	The Adjoint Representation	200
4.7	Lie Groups of Transformations	228
4.8	Homogeneous Spaces	247
	References	261
	Further Reading	262
5	Fibre Bundles	263
5.1	Some Definitions and Theorems on Fibre Bundles	264
5.2	Principal Bundles	270
5.3	Connections in Bundles	280
5.4	Characteristic Classes	288
5.5	Linear Connections	305
5.6	Torsion and Curvature	308
5.7	Geodesics	316
5.8	Almost Complex Manifolds	319
5.9	Almost Symplectic Manifolds	328
	References	341
	Further Reading	342
6	Riemannian Geometry	343
6.1	Some Definitions and Theorems on Riemannian Geometry	345
6.2	Riemannian Manifolds	353
6.3	Riemannian Connections	359
6.4	Geodesics	369
6.5	The Exponential Map	384
6.6	Gauss' Lemma for Covariant Symmetric Tensors	390
6.7	Curvature and Ricci Tensors	400
6.8	Characteristic Classes	403
6.9	Isometries	410
6.10	Left-Invariant Metrics on Lie Groups	416
6.11	Homogeneous Riemannian Manifolds and Riemannian Symmetric Spaces	432
6.12	Spaces of Constant Curvature	451

6.13	Gradient, Divergence, Codifferential, Curl, Laplacian, and Hodge Star Operator on Riemannian Manifolds	454
6.14	Affine, Killing, Conformal, Projective, Jacobi, and Harmonic Vector Fields	471
6.15	Submanifolds. Second Fundamental Form	487
6.16	Energy of Hopf Vector Fields	497
6.17	Surfaces in $\mathbb{R}^3$	505
6.18	Pseudo-Riemannian Manifolds	513
	References	545
	Further Reading	546
7	Some Formulas and Tables	547
	References	599
	Some Notations	601
	Index	603

Fig. 1.3	Stereographic projections of S^1	13
Fig. 1.4	Stereographic projections of S^2 onto the equatorial plane	13
