Foreword		ix
Chapter 1	Lessons from Failures of Gas Cylinders Used for Dispensing Beverages – <i>G Hughes</i>	1
	Introduction	1
	1.1 Causes of moisture in gas cylinders	2
	1.2 Changes in design philosophy	3
	1.3 Failures due to faults in manufacture and quality assurance	4
	1.4 Failures due to change of use	7
	1.5 Failures due to inability to prevent or detect moisture	11
	1.6 Failure due to limitations of periodic examination	15
	1.7 Research	16
	1.8 Conclusions	17
	References	18
Chapter 2	Experience from Health and Safety Laboratory Investigations – <i>P F Heyes</i>	19
	Introduction	19
	2.1 Pressure vessels and boilers	20
	2.2 Chemical reactor vessel	25
	2.3 Piping and pipework	29
	2.4 Liquid propane gas storage	37
	2.5 Miscellaneous failures	39
	2.6 Causes of failure and lessons learned	43
	References	44
Chapter 3	Insurance Aspects of Pressure Systems Failures – <i>G J Amphlett</i>	45
	Introduction	45
	3.1 Engineering insurance	45
	3.2 Examples of failures giving rise to claims	46
	3.3 Lessons from major failure	52
	3.4 The Flixborough disaster	52
	3.5 The inquiry	55
	3.6 Failure of steam shell boilers	56
	3.7 The cost of uninsured losses	59
	3.8 Preventing losses by risk management	61
	3.9 Risk assessment	62
	3.10 Effective inspection	63
	3.11 Lessons from failures	63
Chapter 4	Failure Investigation for Commercial Purposes – System Failures Leading to the Collapse of Storage Vessels under Partial Vacuum – <i>M Phillips</i>	65
	Introduction	65
	4.1 The role of the commercial engineering investigator	66
	4.2 The hopper in a food processing plant	67
	4.3 The holding tank at a bottling plant	69
	4.4 The oil storage tank	70
	4.5 Lessons	72

Chapter 5	Reliable Technical Failure Investigation – <i>R J Pargeter</i>	75
	Introduction	75
5.1	Data gathering	75
5.2	Determination of failure mechanism(s)	76
5.3	Determination of sequence of failure	79
5.4	Determination of cause of failure	81
5.5	Reporting	84
5.6	Conclusions	84
Chapter 6	Failure Design Procedures in the New European Pressure Vessel Standard EN 13445 – <i>S J Maddox</i>	85
	Introduction	85
6.1	Basic approach	85
6.2	Design data	86
6.3	Stresses	90
6.4	Measures for revising an assessment	92
6.5	Fatigue loading	93
6.6	Simplified fatigue assessment methods	93
6.7	Validation	94
6.8	Future work	95
	References	95
Chapter 7	Causes of Vibration Fatigue in Process Pipework – a New Methodology to Assess the Risk – <i>R J Swindell</i>	97
	Introduction	97
7.1	Factors influencing vibration induced fatigue	99
7.2	Strategies for dealing with vibration induced fatigue	101
7.3	Overview of a risk-based approach	102
7.4	Practical implementation	105
7.5	Case studies	110
7.6	Conclusions	111
	References	112
Chapter 8	Avoiding Vibration-induced Fatigue Failures in Process Pipework – <i>T Miles, R Andrews, R Owen, and M Wastling</i>	113
	Introduction	113
8.1	Background	115
8.2	The vibration problem	115
8.3	Examples of failures	119
8.4	Development of assessment methods	121
8.5	Development of long-term, vibration-monitoring techniques	127
8.6	Example modifications	129
8.7	Concluding remarks	130
	References	131
Chapter 9	Lessons Learned from Pressure System Failures – <i>B Crossland</i>	133
	Introduction	133
9.1	Examples of failures in pressurized systems	134
9.2	Lessons to be learned	142
