

TABLE OF CONTENT

Introduction.....	9
1 Objectives	13
2 Theoretical background	15
2.1 Definitions and delimitation of terms	15
2.3 Challenges of landscape change studies	18
2.4 Drivers of landscape transformations	20
2.5 Types of driving forces	20
2.6 Characteristics of driving forces	21
2.7 Landscape change driving forces: the theory and rationale	22
2.8 Landscape transitions and driving forces: quantification of the relationships	22
2.9 Land use change models' validation: justification and critiques	24
3 Applications of some/selected GIS software in the study of landscape transitions: an overview	27
3.1 ArcGIS	27
3.2 Idrisi GIS	28
3.3 ERDAS-Imagine	28
3.4 Manifold GIS	29
3.5 MapInfo	30
3.6 ILWIS GIS	31
4 Spatio-temporal analyses in GIS	33
4.1 Analysis.....	33
4.2 Modelling.....	33

4.3	Prediction.....	34
4.4	Classification of models.....	34
4.5	Space-time analysis in GIS: theory and rationale.....	36
4.6	Overview of selected studies on spatio-temporal analysis in GIS.....	37
4.7	Methods for analyzing past landscape changes.....	39
5	Methods of Landscape Change Prediction	41
5.1	Regressions models.....	41
5.2	Markov chain (MC).....	43
5.3	Cellular automata (CA).....	44
5.4	The CA-MC models.....	44
5.5	Land Change Modeler (LCM).....	44
5.6	Agent-based modeling (ABM).....	45
5.7	The CLUE model.....	45
5.8	Scenarios for InVEST (Integrated Valuation of Environmental Services and Tradeoffs).....	46
6	Case Studies	53
6.1	Landscape changes in a rapid growing urban hub (in Onitsha, south-east Nigeria).....	53
6.2	Landscape changes caused by natural hazard: a consequent of altered land use in Jos, Nigeria.....	70
6.3	Landscape changes vs biodiversity (Nigeria).....	84
6.4	Discussion.....	98
6.5	Landscape changes in Dřevnice River Basin, Southeast Moravia (Czech Republic)	104
7	Discussion	117
8	Conclusion and main achievements	119
	References.....	125
	Appendices.....	159
