

TABLE OF CONTENTS

Chapter 1

General Outlines of Adaptation Processes and the Biological Nature of Exercise Training

Adaptation and Training	1
Homeostatic Regulation	1
Mechanism of General Adaptation	2
Mobilization of Metabolic Resources	2
Acute and Long-Term Adaptation	5
The Nature of Exercise Training	6
Model of the Top Athlete	10
References	19

Chapter 2

Hormones in Adaptation to Physical Exercises (Hormonal Responses to Exercise)

Blood Hormonal Ensemble During Exercise	21
Stability and Variability in Hormonal Responses to Exercise	21
The Rate of Hormonal Responses	27
Determinants of Hormonal Responses	29
Significance of Exercise Intensity	29
Significance of Exercise Duration	31
Training Effects	32
The Interplay Between Significance of Exercise Duration and the Fitness of Persons	35
Homeostatic Needs	35
Factors Modulating Hormonal Responses to Exercise	35
References	39

Chapter 3

Significance of Hormones in Regulation of Metabolism During Exercise

Factors Determining the Hormone Effect	47
Private and Attending Regulation	47
Exercise-Induced Effects at the Level of Modulating Regulation	49
Training Effects at the Level of Modulating Regulation	51
Mobilization of Energy Reserves	55
Activation of Glycogenolysis in Skeletal Muscles	55
Glycogenolysis in the Myocardium	57
Regulation of Glycogenolysis in the Liver	57
Gluconeogenesis	59
Utilization of Blood Glucose	59
Blood Glucose Homeostasis During Exercise	61
Mobilization of Lipid Resources	62
Mobilization of Protein Resources	64
Homeostatic Regulation of Water-Electrolyte Balance During Exercise	69
References	72

Chapter 4

Post-Exercise Recovery Period

Outlines of the Post-Exercise Recovery	83
Restoration of Normal Functional Activities	84
Oxygen Transport System	84
Lactate Dynamics and pH Values in Post-Exercise Recovery	88
Endocrine System	90

Exercise Economy	160
Maximal Oxygen Uptake	160
Specificity of Training Effects on the Cardiovascular System: Heart Hypertrophy	169
Cardiac Performance	172
Contractile Mechanism of the Myocardium	174
Energetics of the Myocardium	175
Additional Adaptive Changes in the Oxygen Transport System	177
References	177

Chapter 7

Specificity of Training Effects on Control Functions and the Connective Tissue

Endocrine Functions	187
Neural Adaptation	188
Changes in the Central Nervous System	191
Cross-Effects of Training on Untrained Muscles	191
Training Effects on the Connective Tissue	192
References	194

Chapter 8

Molecular Mechanisms of Training Effects

Protein Synthesis in Training	200
Evidences of Augmented Protein Synthesis in Training	201
Metabolic Control of Protein Synthesis in Training	204
Control of Transcription	204
Protein Degradation Products	205
Creatine	205
Amino Acids	206
Specific tRNA	207
Energy Balance	207
Muscle Stretch	208
Calcium	208
Prostaglandins	209
Tissue Growth Factors	209
Muscle Satellite Cells	210
Control of Synthesis of Mitochondrial Proteins	210
Translation Control	212
Hormonal Action on Adaptive Protein Synthesis in Training	212
Adaptive Protein Synthesis in the Myocardium	217
Other Theories of Training Mechanisms	217
Conclusion	219
References	220

Chapter 9

Gender Differences in Training Effects

Metabolic Capacities in Male and Female Athletes	227
Endocrine Systems in Exercise in Women	229
Hormonal Responses to Exercise in Women	229
Ovarian-Menstrual Cycle and Hormonal Responses to Exercise	230
Training Influence on the Female Reproductive System	230
Training Effects on Muscle Strength and Hypertrophy	231
Training Effects on Aerobic Working Capacity	233
Summary	234
References	236

Chapter 10

Physiological Aspects of Selected Problems of Training Methodology (Training Tactics)

Choice of Training Exercises	241
Exercise and Training Method	241
Manifestations of Training Specificity in Exercises for Improvement of the Main Qualities of the Human Physical Working Capacity	245
Training Session	247
Criteria of the Trainable Effect of Training Sessions	249
Metabolites	249
Hormones	256
Simplified Criteria	257
Heart Rate Studies	257
Intensity and Volume of Training Loads	261
Significance of Exercise Schedule	262
Endurance and Strength Exercises	263
Necessity for Increased Load (Saturation Phenomenon)	264
Microcycle of Training	265
Variants of Training Microcycles	265
Summation of Influences of Subsequent Sessions	267
Microcycles with Variable Training Loads	272
Two or More Daily Training Sessions	273
The Main Principles of Training Tactics	275
References	276

Chapter 11

Physiological Aspects of Selected Problems of Training Methodology (Training Strategy)

Training Design for a Period of Many Years	281
Ontogenetic Aspects	283
Year-Round Training	286
Interrelations Between Various Training-Induced Changes	287
The Steady Training Effect	287
Detraining Effect	288
The Concentrated Unidirectional Training	291
Adaptivity of the Organism During the Training Year	292
Conclusion	295
References	295

Concluding Remarks	301
