

Contents

1	Aims of the thesis	5
2	Thermal conductivity of composite materials	6
3	Candidate materials	7
3.1	Beryllium oxide	8
3.2	Silicon carbide	8
3.3	Carbon nanotubes	9
3.4	Graphite fibers	9
3.5	Diamonds	10
3.6	Selection of single material for detail analysis	10
3.7	Degradation of SiC thermal conductivity under neutron irradiation	11
4	Analysis of composite fuel performance during steady state operation	12
4.1	Code and model verification and validation	12
4.2	Code modification and composite fuel analysis	14
5	Analysis of composite fuel performance during LOCA type accident	16
5.1	Code and model verification and validation	17
5.2	Model modification and fuel analysis	17
5.3	FEMAXI analysis of the LOCA type accident	19
6	Analysis of composite fuel performance during RIA accident	21
7	Conclusion	22
	Bibliography	23
	Curriculum Vitae	26
	Abstract	27
