1	Rocket Fundamentals	1
1.1	Rocket Principles	1
1.1.1	Repulsion Principle	1
1.1.2	Total Thrust	4
1.1.3	Equation of Rocket Motion	5
1.2	Jet Engine	7
1.2.1	Nozzle Divergence	7
1.2.2	Pressure Thrust	9
1.2.3	Momentum versus Pressure Thrust	12
1.3	Rocket Performance	15
1.3.1	Payload Considerations	15
1.3.2	Rocket Efficiency	17
1.3.3	Performance Parameters	19
1.4	Relativistic Rocket	24
1.4.1	Space Flight Dynamics	25
1.4.2	Relativistic Rocket Equation	28
1.4.3	Exhaust Considerations	29
1.4.4	External Efficiency	32
1.4.5	Space-Time Transformations	32
1.5	Problems	34
2	Rocket Flight	37
2.1	General Considerations	38
2.2	Rocket in Free Space	39
2.3	Rocket in a Gravitational Field	40
2.3.1	Impulsive Maneuvers	40
2.3.2	Brief Thrust	41
2.3.3	Gravitational Loss	42
2.4	Delta-v Budget and Fuel Demand	43
2.4.1	Delta-v Budget	43

2.4.2	Fuel Demand—Star Trek Plugged	44
2.5	Problems	46
3	Rocket Staging	47
3.1	Serial Staging	47
3.1.1	Definitions	47
3.1.2	Rocket Equation	51
3.2	Serial-Stage Optimization	52
3.2.1	Road to Stage Optimization	52
3.2.2	General Optimization	53
3.3	Analytical Solutions	58
3.3.1	Uniform Staging	58
3.3.2	Uniform Exhaust Velocities	60
3.3.3	Uneven Staging	61
3.4	Parallel Staging	62
3.5	Other Types of Staging	64
3.6	Problems	64
4	Thermal Propulsion	67
4.1	Engine Thermodynamics	68
4.1.1	Physics of Propellant Gases	68
4.1.2	Flow Velocity	73
4.1.3	Flow at the Throat	74
4.1.4	Flow in the Nozzle	75
4.2	Ideally Adapted Nozzle	81
4.2.1	Ideal-Adaptation Criterion	81
4.2.2	Ideal Nozzle Design	84
4.2.3	Shock Attenuation and Pogos	85
4.2.4	Ideal Engine Performance	86
4.3	Engine Thrust	88
4.3.1	Engine Performance Parameters	89
4.3.2	Thrust Performance	90
4.3.3	Nozzle Efficiency	93
4.4	Engine Design	95
4.4.1	Combustion Chamber	95
4.4.2	Nozzles	97
4.4.3	Design Guidelines	102
4.5	Problems	103
5	Electric Propulsion	105
5.1	Overview	105
5.2	Ion Thruster	106

5.2.1	Ion Acceleration and Flow	107
5.2.2	Ideal Engine Thrust	110
5.2.3	Thruster Performance	112
5.3	Electric Propulsion Optimization	115
5.4	Problem	119
6	Atmospheric and Ascent Flight	121
6.1	Earth's Atmosphere	121
6.1.1	Density Master Equation	122
6.1.2	Atmospheric Structure	123
6.1.3	Piecewise-Exponential Model	129
6.2	Hypersonic Flow Theory	130
6.2.1	Free Molecular Flow	130
6.2.2	Newtonian Flow Theory	133
6.2.3	Drag and Lift Coefficients	136
6.2.4	Drag in Free Molecular Flow	137
6.2.5	Aerodynamic Forces	141
6.3	Equations of Motion	144
6.4	Ascent Flight	149
6.4.1	Ascent Phases	150
6.4.2	Optimization Problem	151
6.4.3	Gravity Turn	155
6.4.4	Pitch Maneuver	156
6.4.5	Constant-Pitch-Rate Maneuver	157
6.4.6	Terminal State Control	160
6.4.7	Optimal Ascent Trajectory	162
7	Orbits	165
7.1	Fundamental Physics	165
7.1.1	Gravitational Potential	165
7.1.2	Gravitational Force	169
7.1.3	Conservation Laws	174
7.1.4	Newton's Laws of Motion	175
7.1.5	General Two-Body Problem	178
7.2	General Principles of Motion	181
7.2.1	Vector Derivatives	181
7.2.2	Motion in a Central Force Field	182
7.2.3	Vis-Viva Equation	186
7.2.4	Effective Radial Motion	188
7.3	Motion in a Gravitational Field	190
7.3.1	Orbit Equation	190
7.3.2	Position on the Orbit	194

7.3.3	Orbital Velocity	196
7.3.4	Orbital Energy	198
7.3.5	Orbital Elements	199
7.4	Keplerian Orbits	208
7.4.1	Circular Orbit	208
7.4.2	Elliptic Orbit	210
7.4.3	Hyperbolic Orbit	222
7.4.4	Parabolic Orbit	227
7.4.5	ε -Based Transformation	231
7.4.6	h -Based Transformation	235
7.4.7	Conventional State Vector Propagation	242
7.4.8	Universal Variable Formulation	244
7.5	Radial Trajectories	247
7.5.1	Radial Elliptic Trajectory	248
7.5.2	Radial Hyperbolic Trajectory	250
7.5.3	Radial Parabolic Trajectory	251
7.5.4	Free Fall	252
7.5.5	Bounded Vertical Motion	253
7.6	Life in Other Universes?	255
7.6.1	Equation of Motion in n Dimensions	256
7.6.2	4-Dimensional Universe	259
7.6.3	Universes with ≥ 5 Dimensions	260
7.6.4	Universes with ≤ 2 Dimensions	262
7.7	Stellar Orbits	262
7.7.1	Motion in General Gravitational Potentials	262
7.7.2	Stellar Motion in General Galaxies	266
7.7.3	Stellar Orbits in Globular Cluster Galaxies	269
7.7.4	Stellar Motion in Disk-Shaped Galaxies	271
7.8	Problems	273
8	Orbital Maneuvering	279
8.1	One-Impulse Maneuvers	280
8.1.1	Elementary Maneuvers	281
8.1.2	Elementary Maneuvers in Circular Orbits	287
8.1.3	General Maneuvers	289
8.1.4	Tangent Plane Maneuvers	292
8.1.5	Genuine Plane Change Maneuvers	293
8.1.6	Tangent Maneuver	295
8.2	Lambert Transfer	298
8.2.1	Orbital Boundary Value Problem	298
8.2.2	Lambert Transfer Orbits	301
8.2.3	Lambert's Problem	306
8.2.4	Minimum Effort Lambert Transfer	313

8.3	Hohmann Transfer	313
8.3.1	The Minimum Principle	314
8.3.2	Transfer Between Circular Orbits	317
8.3.3	Transfer Between Near-Circular Orbits	321
8.3.4	Sensitivity Analysis	323
8.4	Other Transfers	325
8.4.1	Parabolic Escape Transfer	325
8.4.2	Bi-elliptic Transfer	327
8.4.3	Super-Synchronous Transfer Orbits	329
8.4.4	n -Impulse Transfers	334
8.4.5	Continuous Thrust Transfer	334
8.5	Relative Orbits	336
8.5.1	General Equation of Motion	337
8.5.2	Circular Orbits	340
8.5.3	Flyaround Trajectories	345
8.5.4	Near-Circular Orbits	350
8.6	Orbital Rendezvous	353
8.6.1	Launch Phase	356
8.6.2	Phasing	359
8.6.3	Homing Phase	361
8.6.4	Closing Phase	367
8.6.5	Final Approach	370
8.6.6	Shuttle-ISS Rendezvous	375
8.6.7	Plume Impingement	378
8.7	Problems	380
