

Contents

Preface **vii** • Introduction **ix**

WORLD I Cells 1

1 Membranes, Particles, and Potentials 3

- 1.1. Complex System Approach. 4
- 1.2. The Biological Membrane 6
- 1.3. Movement in Solution 7
- 1.4. Concentration of Water: Osmosis 8
- 1.5. Movement of Ions: The Nernst Equation 9

2 Action Potential 11

- 2.1. Creation of Membrane Potential 12
- 2.2. Basic Features of Action Potential. 14
- 2.3. Generation of Action Potential. 15

3 Information Transmission 19

- 3.1. Conduction of Action Potential 20
- 3.2. Myelinated Fibers 21
- 3.3. Structure of Neurons 22
- 3.4. Information Coding in the Nervous System. . . 24
- 3.5. Synaptic Transmission. 25
- 3.6. Neurotransmitters 26
- 3.7. Temporal and Spatial Summation 26

4 Skeletal Muscle 29

- 4.1. Structure of Skeletal Muscle 30
- 4.2. Myofilaments 31
- 4.3. Neuromuscular Synapse 31
- 4.4. Muscle Contraction 33
- 4.5. Types of Muscle Contraction. 34
- 4.6. Elements of Mechanics 35
- 4.7. Force-Length and Force-Velocity Relationships 36
- 4.8. External Regimes of Muscle Contraction . . . 37

5 Receptors 39

- 5.1. Types and Properties of Receptors. 40
- 5.2. Muscle Spindles 41

- 5.3. The Gamma-System 43
- 5.4. Golgi Tendon Organs 44
- 5.5. Other Muscle Receptors 44
- 5.6. Articular Receptors 45
- 5.7. Cutaneous Receptors 45
- 5.8. Where Does The Information Go? 46

6 Motor Units and Electromyography 49

- 6.1. The Motor Unit 50
- 6.2. Fast and Slow Motor Units. 50
- 6.3. The Henneman Principle 52
- 6.4. Functional Roles of Motor Units. 53
- 6.5. Electromyography 54
- 6.6. Processing Electromyographic Signals. 55

WORLD I Review Materials 58

WORLD II Connections 61

7 Excitation and Inhibition Within the Spinal Cord 63

- 7.1. The Spinal Cord. 64
- 7.2. Excitation Within the Central Nervous System 66
- 7.3. Postsynaptic Inhibition. 66
- 7.4. Renshaw Cells 67
- 7.5. Ia-Interneurons 68
- 7.6. Presynaptic Inhibition 69
- 7.7. Persistent Inward Currents 70

8 Monosynaptic Reflexes. 73

- 8.1. Reflexes. 74
- 8.2. Reflex Arc 74
- 8.3. H-Reflex, T-Reflex, and M-Response. 75
- 8.4. Effects of Voluntary Muscle Activation on Monosynaptic Reflexes 79
- 8.5. F-Wave. 79

9 Oligosynaptic and Polysynaptic Reflexes ... 81

- 9.1. Oligosynaptic Reflexes 82
- 9.2. Polysynaptic Reflexes 83
- 9.3. Flexor Reflex 85
- 9.4. Tonic Stretch Reflex 85
- 9.5. Tonic Vibration Reflex 86
- 9.6. Interactions Among Reflex Pathways 88
- 9.7. Inter-Joint and Inter-Limb Reflexes 89

10 Voluntary Control of a Single Muscle. 91

- 10.1. Feedforward and Feedback Control 92
- 10.2. Servo Control 93
- 10.3. Servo Hypothesis. 95
- 10.4. α - γ Coactivation 96
- 10.5. Voluntary Activation of Muscles. 96
- 10.6. Equilibrium-Point Hypothesis. 97

11 Single-Joint Movements 101

- 11.1. Isotonic Movements and Isometric Contractions. 102
- 11.2. Performance Variables and Task Parameters 103
- 11.3. Kinematic Profiles of Single-Joint Isotonic Movements. 104
- 11.4. EMG Patterns of Single-Joint Isotonic Movements. 105
- 11.5. EMG Patterns of Single-Joint Isometric Contractions. 107
- 11.6. Dual-Strategy Hypothesis 110

12 Pre-Programmed Reactions. 113

- 12.1. Pre-Programmed Reactions 114
- 12.2. Pre-Programmed Reactions Versus Stretch Reflexes. 115
- 12.3. Searching for the Afferent Source of Pre-Programmed Reactions. 116
- 12.4. Pre-Programmed Reactions During Movement Perturbations 117
- 12.5. Features of Pre-Programmed Reactions 117
- 12.6. Pre-Programmed Corrections of the Vertical Posture 118
- 12.7. Corrective Stumbling Reaction 119

WORLD II Review Materials 121**WORLD III Structures 123****13 Brain Anatomy 125**

- 13.1. Single-Neuron Recording 126
- 13.2. Electroencephalography 126
- 13.3. Evoked Potentials 127
- 13.4. Radiography 128
- 13.5. Computerized Tomography 129
- 13.6. Positron Emission Tomography 129
- 13.7. Magnetic Resonance Imaging 130

- 13.8. Functional Magnetic Resonance Imaging. ... 131
- 13.9. Transcranial Magnetic Stimulation. 131
- 13.10. Neuroanatomical Tracing 132
- 13.11. Major Brain Structures. 132

14 Cerebral Cortex 139

- 14.1. Cerebral Hemispheres. 140
- 14.2. Structure of the Cerebral Cortex 141
- 14.3. Primary Motor, Premotor, and Supplementary Motor Areas. 142
- 14.4. Inputs to the Motor Cortex. 143
- 14.5. Outputs of the Motor Cortex 144
- 14.6. Preparation for Voluntary Movement 145
- 14.7. Neuronal Population Vectors 147
- 14.8. What Variables May Be Encoded in the Cortical Neuronal Activity? 148

15 Cerebellum 151

- 15.1. Anatomy of the Cerebellum. 152
- 15.2. Cerebellar Inputs. 154
- 15.3. Cerebellar Outputs 155
- 15.4. Cerebellar Activity and Voluntary Movement 156
- 15.5. Neuronal Population Vectors 157
- 15.6. What Does the Cerebellum Do? 157

16 Basal Ganglia 161

- 16.1. Anatomy of the Basal Ganglia. 162
- 16.2. Inputs and Outputs of the Basal Ganglia ... 162
- 16.3. Motor Circuits Involving the Basal Ganglia ... 164
- 16.4. Activity of Basal Ganglia During Movement 165
- 16.5. Functions of the Basal Ganglia 165

17 Ascending and Descending Pathways. 167

- 17.1. Properties of Neural Pathways 168
- 17.2. Afferent Input to the Spinal Cord 168
- 17.3. Dorsal Column Pathway 169
- 17.4. Spinocervical Tract 170
- 17.5. Spinothalamic Tract 170
- 17.6. Spinocerebellar Tracts 170
- 17.7. Spinoreticular Tract 171
- 17.8. Pyramidal Tract 171
- 17.9. Rubrospinal Tract. 172
- 17.10. Vestibulospinal Tracts 172
- 17.11. Reticulospinal and Other Descending Tracts. 173
- 17.12. Propriospinal Tracts. 173
- 17.13. Cranial Nerves. 173

18 Memory 175

- 18.1. Descartes' Dualism and Mechanisms of Memory 176
- 18.2. Muscle Memory 177
- 18.3. Types of Memory and Learning. 177
- 18.4. Habituation of Reflexes: An Example of Nonassociative Learning. ... 177
- 18.5. Conditioned Reflexes: An Example of Associative Learning. 178

18.6. Motor Learning	179
18.7. Short-Term and Long-Term Memory	180
18.8. Neuronal or Synaptic Mechanisms of Memory?	180
18.9. Memory Retrieval.	181
18.10. Genetic Code as an Example of Memory ..	182
18.11. Plasticity in the Brain	182
18.12. Korsakoff's Syndrome	183
18.13. Possible Role of the Hippocampus and Cerebellum in Memory	183
18.14. Spinal Memory	184

WORLD III Review Materials 185

WORLD IV Behaviors: Control and Coordination 187

19 Motor Control 189

19.1. Design of the Human Body: A Source of Problems?	190
19.2. Force-Control Approach	190
19.3. Engrams and the Generalized Motor Program	192
19.4. Internal Models	193
19.5. Equilibrium-Point Hypothesis: Main Ideas. .	194
19.6. Equilibrium-Point Hypothesis: Subtle Points	196
19.7. Dynamic Systems Approach	197

20 Motor Synergies 199

20.1. Motor Redundancy	200
20.2. Optimization Approaches	200
20.3. Principle of Abundance	202
20.4. Structural Units and Synergies	203
20.5. Studies of Motor Synergies: Principal Component Analysis.	204
20.6. Uncontrolled Manifold Hypothesis	205

21 Postural Control. 209

21.1. Vertical Posture	210
21.2. Postural Sway	211
21.3. Vestibular System	212
21.4. Vision and Postural Control	214
21.5. Proprioception and Postural Control	215
21.6. Anticipatory Postural Adjustments.	215
21.7. Corrective Postural Reactions	217
21.8. Postural Synergies	218

22 Locomotion 221

22.1. Two Approaches to Locomotion	222
22.2. Central Pattern Generators	222
22.3. Locomotor Centers	223
22.4. Spinal Locomotion	224
22.5. Spinal Control of Locomotion in Humans ..	225
22.6. Gait Patterns	226
22.7. Dynamic Pattern Generation	226

22.8. Step Initiation	228
22.9. Corrective Stumbling Reaction	228

23 Multi-Joint Movement. 231

23.1. Targeted Reaching Movements.	232
23.2. Major Problems of Controlling Natural Reaching Movements	233
23.3. Inter-Joint Reflexes	234
23.4. Spinal Mechanisms of Multi-Joint Coordination	235
23.5. Supraspinal Mechanisms	236
23.6. Equilibrium-Trajectory Hypothesis	237
23.7. What Is Controlled During Multi-Joint Movements?	237

24 Prehension 241

24.1. Hand Joints and Muscles	242
24.2. Cortical Representations of the Hand	243
24.3. Indices of Finger Interaction	244
24.4. Multi-Finger Synergies in Pressing Tasks ..	245
24.5. Grasping	246
24.6. Prehension Synergies and the Principle of Superposition	247

25 Eye Movement and Vision. 249

25.1. The Eye	250
25.2. Photoreceptors	250
25.3. Retina and Optic Nerve	251
25.4. Oculomotor Control	252
25.5. Central Mechanisms of Visual Perception. .	253
25.6. Visual Information and Voluntary Movements	255

26 Kinesthesia 257

26.1. Physical Variables Sensed by Proprioceptors	258
26.2. Peripheral Sources of Kinesthetic Information	258
26.3. Role of Motor Command in Kinesthesia ..	260
26.4. Where Does the Information Go?	261
26.5. Kinesthetic Illusions	262
26.6. Pain	263

WORLD IV Review Materials 266

WORLD V Evolving and Changing Behaviors 269

27 Fatigue 271

27.1. Fatigue and Its Contributors	272
27.2. Muscular Mechanisms of Fatigue	273
27.3. Spinal Mechanisms of Fatigue	274
27.4. Supraspinal Mechanisms of Fatigue	276
27.5. Adaptive Changes During Fatigue	276
27.6. Abnormal Fatigue	277

28 Aging 279

- 28.1. Movements in Elderly People 280
- 28.2. Age-Related Changes in Muscles and Motor Units 281
- 28.3. Muscle Reflexes in Elderly People 283
- 28.4. Age-Related Changes in Sensory Function 283
- 28.5. Muscle Activation Patterns During Fast Movements 283
- 28.6. Age-Related Changes in Posture and Gait 284
- 28.7. Hand Function in Elderly Persons 285
- 28.8. Adaptive Changes in Motor Patterns 287
- 28.9. Effects of Training 287

29 Typical and Atypical Development 289

- 29.1. Humans At Birth 290
- 29.2. Motor Milestones During Typical Development 290
- 29.3. Exploration and Emergent Motor Patterns 291
- 29.4. Down Syndrome 291
- 29.5. Practice and Down Syndrome 294
- 29.6. Autism 296
- 29.7. Developmental Coordination Disorder 296

WORLD VI Motor Disorders 299**30 Peripheral Muscular and Neurological Disorders 301**

- 30.1. Myopathies and Neuropathies 302
- 30.2. Muscular Dystrophies 302
- 30.3. Continuous Muscle Fiber Activity Syndromes 303
- 30.4. Myasthenia Gravis 304
- 30.5. Peripheral Neuropathies 305
- 30.6. Motor Disorders of Diabetes 306
- 30.7. Radiculopathies 307
- 30.8. Amyotrophic Lateral Sclerosis 308

31 Spinal Cord Injury and Spasticity 309

- 31.1. Consequences of Spinal Cord Injury 310
- 31.2. Signs and Symptoms of Spasticity 311
- 31.3. Possible Mechanisms of Spasticity 314
- 31.4. Treatment of Spasticity 315
- 31.5. Multiple Sclerosis 318

Laboratories 367

- Laboratory #1 369
- Laboratory #2 372
- Laboratory #3 374
- Laboratory #4 376
- Laboratory #5 378
- Laboratory #6 380

32 Disorders Involving the Basal Ganglia 321

- 32.1. Clinical Features of Parkinson's Disease 322
- 32.2. Voluntary Movements in Parkinson's Disease 324
- 32.3. Postural Control and Locomotion in Parkinson's Disease 326
- 32.4. Treatment of Parkinson's Disease 327
- 32.5. Huntington's Disease 328
- 32.6. Hemiballismus 328
- 32.7. Dystonia 329
- 32.8. Tardive Dyskinesia 331

33 Cerebellar Disorders 333

- 33.1. Consequences of Cerebellar Injuries in Animals 334
- 33.2. Causes of Cerebellar Disorders 335
- 33.3. Stance and Gait Abnormalities 335
- 33.4. Voluntary Movements in Cerebellar Disorders 336
- 33.5. Cerebellar Tremor 339
- 33.6. Ataxias 340
- 33.7. Cerebellar Cognitive Affective Syndrome 340

34 Cortical Disorders 343

- 34.1. Lesions of Different Cortical Lobes 344
- 34.2. Stroke 344
- 34.3. Myoclonus 347
- 34.4. Essential Tremor 349
- 34.5. Tics 350
- 34.6. Tourette's Syndrome 350
- 34.7. Cerebral Palsy 351
- 34.8. Williams Syndrome 352
- 34.9. Wilson's Disease 352

35 Motor Rehabilitation 355

- 35.1. Do Normal Movements Exist? 356
- 35.2. Back to Structural Units and Synergies 357
- 35.3. Changes in CNS Priorities 358
- 35.4. Role of CNS Plasticity 359
- 35.5. Adaptive Changes in Motor Patterns 360
- 35.6. Amputation 361
- 35.7. Practical Considerations 361

WORLDS V AND VI Review Materials 364
