

# Contents

<b>Preface</b> .....	<b>V</b>
<b>Contents</b> .....	<b>IX</b>
<b>List of Abbreviations</b> .....	<b>XIII</b>
<b>Glossary of Symbols</b> .....	<b>XV</b>
<b>CHAPTER 1</b> <b>Conditional expectations and principals of finance</b> .....	<b>1</b>
<b>1.1</b> <b>Probability theory preliminaries</b> .....	<b>1</b>
<b>1.2</b> <b>Stochastic processes preliminaries</b> .....	<b>4</b>
<b>1.3</b> <b>Asset pricing</b> .....	<b>6</b>
<b>1.4</b> <b>Black Scholes market</b> .....	<b>11</b>
1.4.1     Generalizations of the Black Scholes market .....	13
1.4.2     Black Scholes Implied Volatility.....	14
<b>1.5</b> <b>State price density</b> .....	<b>15</b>
1.5.1     No-arbitrage conditions implied by the SPD .....	16
<b>1.6</b> <b>Portfolio selection problems</b> .....	<b>17</b>
<b>CHAPTER 2</b> <b>Theoretical and practical motivations for the use of the</b> <b>moving average</b> .....	<b>21</b>
<b>2.1</b> <b>Introduction</b> .....	<b>21</b>
<b>2.2</b> <b>Theoretical motivations for the use of the moving average rule</b> .....	<b>23</b>
<b>2.3</b> <b>Ex-post empirical analysis</b> .....	<b>29</b>
<b>2.4</b> <b>Conclusion</b> .....	<b>40</b>
<b>CHAPTER 3</b> <b>On the approximation of a conditional expectation and</b> <b>independence tests</b> .....	<b>43</b>
<b>3.1</b> <b>Introduction</b> .....	<b>43</b>
<b>3.2</b> <b>Problem formulation</b> .....	<b>46</b>
3.2.1     The OLP Method.....	49
3.2.2     The kernel method.....	52

<b>3.3</b>	<b>A simulation comparison .....</b>	<b>53</b>
3.3.1	OLP – number of intervals.....	55
3.3.2	Kernel – density and bandwidth.....	55
<b>3.4</b>	<b>On the optimal number of intervals.....</b>	<b>57</b>
<b>3.5</b>	<b>New tests of independence.....</b>	<b>64</b>
<b>3.6</b>	<b>Conclusion .....</b>	<b>67</b>
<b>CHAPTER 4</b>	<b>Semidefinite positive correlation measures in portfolio theory .....</b>	<b>71</b>
<b>4.1</b>	<b>Introduction .....</b>	<b>71</b>
<b>4.2</b>	<b>Concordance and semidefinite positive correlation measures .....</b>	<b>73</b>
<b>4.3</b>	<b>Deviation measures and linear correlation measures in portfolio selection problems.....</b>	<b>79</b>
<b>4.4</b>	<b>Two distinct ways to use correlation measures in portfolio problems .....</b>	<b>88</b>
4.4.1	The portfolio dimensional problem .....	88
4.4.2	Portfolio selection problems .....	89
<b>4.5</b>	<b>An empirical ex-post analysis .....</b>	<b>90</b>
4.5.1	Portfolio dimensionality reduction of large scale portfolio problems.....	92
4.5.2	Portfolio performance optimisation .....	96
<b>4.6</b>	<b>Conclusion .....</b>	<b>100</b>
<b>CHAPTER 5</b>	<b>On the impact of conditional expectation estimators in portfolio theory.....</b>	<b>103</b>
<b>5.1</b>	<b>Introduction .....</b>	<b>104</b>
<b>5.2</b>	<b>Practical and theoretical aspects of return approximation in large-scale portfolio selection problems.....</b>	<b>106</b>
5.2.1	Correlation measures and principal component analysis .....	107
5.2.2	Approximation with parametric and nonparametric regression models..	108
5.2.3	Empirical comparison between parametric and nonparametric estimators .....	113
<b>5.3</b>	<b>Optimal portfolio choices accounting for heavy tails .....</b>	<b>120</b>
5.3.1	An ex-post empirical analysis according to conditional expectation estimation .....	123
<b>5.4</b>	<b>Optimal portfolio choices for different investors preferences .....</b>	<b>128</b>
5.4.1	Bandwidth selection problem .....	131
5.4.2	New alternative multivariate kernel estimator .....	132
5.4.3	Ex-post empirical analysis according to different investors' preferences	133

<b>5.5 Conclusion .....</b>	<b>137</b>
<b>CHAPTER 6 Conclusion.....</b>	<b>139</b>
<b>Appendix A Gaussian and <math>\alpha</math>-stable distributions .....</b>	<b>143</b>
<b>Appendix B Stochastic dominance and increasing convex order .....</b>	<b>147</b>
<b>References.....</b>	<b>151</b>
<b>List of Tables .....</b>	<b>161</b>
<b>List of Figures .....</b>	<b>163</b>
<b>Index .....</b>	<b>165</b>
<b>Summary .....</b>	<b>167</b>
